

YOUNG PERSONS' BEHAVIOUR AND ATTITUDES SURVEY

Additional Analyses

YOUNG PERSONS' BEHAVIOUR AND ATTITUDES SURVEY

Additional analyses

Following on from the preliminary results, some further analyses were carried out to make comparisons between pupils who have or see one or other of their parents*, and those who don't, for certain questions within the 'General Information', 'School', 'Nutrition', 'Smoking', 'Alcohol', 'Solvents', 'Drugs', 'Policing' and 'Sexual Experience & Knowledge' sections.

Also, comparisons between pupils who have been involved in risky behaviour (i.e. smoking, drinking, solvents, drugs and sex), and those who have not, have been made for particular questions within several of the sections.

As before, results are given in percentages that have been rounded to the nearest whole number.

Please note that there is no inference of a causal relationship between the variables featured in the following crosstabulations.

* *Less than 100 pupils do not have or see their mother and therefore no further analysis was carried out as any findings may not be representative of all post-primary school children.*
