# SUPPLEMENT

TO THE

## FORTY-SEVENTH REPORT OF THE REGISTRAR-GENERAL

OF

## MARRIAGES, BIRTHS, AND DEATHS IN IRELAND,

CONTAINING

### DECENNIAL SUMMARIES

FOR THE YEARS 1901-1910.

TO

HIS EXCELLENCY, JOHN CAMPBELL, EARL OF ABERDEEN, K.T.,

&c.,            &c.,            &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY :

The Report and Summary Tables which I have now the honour of submitting to Your Excellency relate to the Marriages, Births, and Deaths registered in Ireland during the ten years ended the 31st December, 1910.

The registration of Births and Deaths was instituted in Ireland in 1864. The registration of Marriages, other than those celebrated by the Roman Catholic clergy was provided for under the Act 7 and 8 Vic., cap. 81, which came into force on the 1st April, 1845, but Roman Catholic Marriages were not registered until the year 1864, when the Act 26 and 27 Vic., cap. 90, for the registration of those Marriages came into operation.

The following Acts relating to Marriages came into operation during the period from the 1st January, 1901, to 31st December, 1910, viz. :—

- (1) The Marriage with Foreigners' Act, 1906, which was passed on the 29th November of that year, amending the Law with respect to the Marriages of British Subjects with Foreigners, and providing for cases of such Marriages abroad, and also for the solemnization of such Marriages in the United Kingdom.
- (2) The Deceased Wife's Sister's Marriage Act, which was passed on the 28th August, 1907, legalizes the Marriage of a man with the sister or half-sister of his deceased wife, and is retrospective in its effects.
- (3) The Naval Marriages' Act.—By this Act, which came into operation on 1st January, 1909, provision is made in cases of intended marriage in Ireland where one of the parties is an Officer, Seaman or Marine borne on the books of one of His Majesty's Ships at sea, whereby Notice may be given by that party to the Captain or Commanding Officer of the Ship, who is empowered to issue a Certificate for marriage by or without licence. This Certificate, which will be in such form as may be prescribed by the Admiralty, will have all the force and effect of a like Certificate issued by a District Registrar of Marriages. The requirements of the Law must be in all respects fulfilled as regards the female party.

The following Acts of Parliament, which came into operation during the decade 1901-1910, have also more or less affected this Department :—

- Factory and Workshops Acts (1901), 1 Edward VII., cap. 22.
- Irish Land Act, 3 Edward VII., cap. 37, sec. 56 (1903).
- Notification of Births Act, 7 Edward VII., cap. 40, sec. 1 (4) (1907).

## GENERAL SUMMARY.

Table I. gives a general summary of the numbers of Marriages, Births, and Deaths registered in Ireland from the commencement of the Registration Acts in 1864, to the close of the year 1910, and of the amount of emigration during the same period, with the yearly averages for the four decennial periods 1871-80, 1881-90, 1891-1900, and 1901-1910.

TABLE I.—Showing for each of the years 1864-1910, the estimated POPULATION; the number of MARRIAGES, BIRTHS, and DEATHS registered, and the number of EMIGRANTS enumerated, with the rates per 1,000 of the Population represented thereby, and the averages for the ten years 1871-80, 1881-90, 1891-1900, and 1901-1910 respectively.

YEARS.	*Estimated Population in the middle of each year.	Numbers Registered.			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population.

\* In this Table and throughout the Report, except where otherwise stated, the Provinces and Counties are as constituted after alterations made in County Boundaries under the provisions of the Local Government (Ireland) Act, 1898.

An examination of Table I. shows that the estimated population of Ireland had decreased between the years 1900 and 1910 to the extent of 83,080, or at the rate of 1.86 per cent. However, in the year 1909 an increase of population was estimated for the first time since 1877.

The total number of Marriages registered during the ten years 1901–1910 was 227,211 as compared with 221,608 during the previous decade showing an increase of 5,603 or 2.5 per cent. in a decreasing population. The average annual marriage rates per 1,000 of the population were, for the two decades, 4.84 for the earlier, and 5.14 for the later. The largest number of Marriages which took place in any one year was 23,078, or at the rate of 5.25 per 1,000 in the year 1905, the smallest was for the year 1910 when the number was 22,112, or at the rate of 5.04 per 1,000 of the population.

The total number of Births registered during the decade was 1,023,352, as compared with 1,055,020 for the previous ten years, being 31,668, or 3.1 per cent. less. The average annual birth-rate for the earlier period was 23.0, and for the latter 23.1 per 1,000 living. The greatest number of births in any one year during the ten years 1901–1910 took place in the year 1904, when there were 103,811, and the smallest number in 1901, namely, 100,976, or at the respective rates of 23.6 and 22.7 per 1,000 of the population.

The Deaths for the period under consideration numbered 767,256 as compared with 836,035 for the previous ten years, thus showing a decrease of 68,779, or 8.2 per cent., and a decrease in the average annual death-rate from 18.2 in the earlier to 17.3 per 1,000 living in the later period. The greatest annual number of Deaths during the decade occurred in the year 1904, when there were 79,513, and the smallest in 1906, when there were 74,427 only, the respective rates being 18.0 and 16.9 per 1,000 living.

As the Births numbered 1,023,352 and the Deaths 767,256, the former exceeded the latter by 256,096, indicating a natural increase in the population of Ireland to this amount. During the decade 346,024 emigrants, or 7.8 per 1,000 of the mean population, left Ireland. The number of emigrants would thus appear to have exceeded the excess of Births over Deaths by 89,928. The number of emigrants in the preceding decennium was 433,526. The actual decrease in the population from the Census date (31st March) 1901 to the Census date (2nd April) 1911 was 68,556.

In selecting the areas for which the abstract tables should be compiled, it was not considered necessary to give statistics for areas smaller than Superintendent Registrars' districts, which coincide with the districts of the Registrars of Marriages under 7 & 8 Vic., cap. 81, and with the Poor Law Unions. Of these there are 158, having in 1911 an average population of 27,786. The Registrars' districts, of which there are 828, with an average population of 5,302 in 1911, appear to be too small in area and population to warrant separate abstracts being made for each.

In the remarks which follow, I beg to submit, for your Excellency's consideration, some of the more important features connected with the Returns of Marriages, Births and Deaths during the decennial period, 1901–1910.

## MARRIAGES.

The number of Marriages registered during the decade was 227,211, or at an annual rate of 5·14 per 1,000 of the average population. The greatest annual number registered was 23,078, or at the rate of 5·25 per 1,000 of the estimated population, in the year 1905, and the smallest number was in 1910, when 22,112 were recorded, being at the rate of 5·04 per 1,000 of the population.

Of the marriages registered during the decade, 158,949 were according to the rites and ceremonies of the Roman Catholic Church; 35,759 were according to the rites and ceremonies of the Church of Ireland; 23,400 were in Registered Presbyterian Meeting-houses; 5,006 in "Registered Buildings" belonging to various religious denominations; 3,918 by Civil Contract in District Registrars' Offices; 77 according to the usages of the Society of Friends; and 102 according to the Jewish rite. The relative average annual rates of these marriages to every 1,000 of the corresponding mean population were:—Roman Catholics, 4·85; all others, 5·94.

Comparing the foregoing statement with the corresponding figures for the previous decade, it appears that the number of marriages registered increased by 5,603, or 2·5 per cent., and the average annual marriage-rate per 1,000 of the population from 4·84 to 5·14.

The Roman Catholic marriages registered increased from 152,227 to 158,949, or 4·42 per cent., the rate having risen from 4·44 to 4·85 per 1,000 persons. Those according to the rites of the Church of Ireland decreased from 36,466 to 35,759, or 1·94 per cent., while on the contrary the average annual rate rose by 0·01 from 6·17 to 6·18. Those in Registered Presbyterian Meeting-houses fell from 23,969 to 23,400, being a decrease of 569, or 2·37 per cent., the rate having fallen from 5·40 to 5·30.

The marriages in Registered Buildings belonging to various religious denominations (under the Act 7 & 8 Vic., cap. 81) rose from 4,935 to 5,006, being an increase of 71, or 1·44 per cent. Marriages by Civil Contract increased from 3,819 to 3,918, or 2·59 per cent. The marriages among members of the Society of Friends fell from 92 to 77. Among the Jews marriages showed a very slight increase—from 100 to 102.

I desire here to express my thanks to the Clergy of all Religious Denominations for the very kind assistance which they have afforded me in the discharge of my duties, in carrying out the complicated provisions of the Irish Marriage Acts.

As in many parts of the country about one-half of the annual number of Roman Catholic Marriages takes place between Christmas and Shrovetide, the number of marriages recorded in the first quarter of the year is much greater than that in any other, as shown in the following Table.

TABLE IV.—MARRIAGES registered during each QUARTER of the TEN YEARS, 1901–1910.

YEAR.	NUMBER OF MARRIAGES REGISTERED DURING THE QUARTER ENDING THE LAST DAY OF											
	March.			June.			September.			December.

1907 ..	4,573	1,455	6,028	3,858	1,785	5,643	3,666	1,943	5,609	3,474	1,755	5,229
1908 ..	5,879	1,344	7,223	3,191	1,685	4,876	3,594	1,835	5,429	3,405	1,801	5,206
1909 ..	5,431	1,336	6,767	3,580	1,693	5,273	3,666	1,848	5,514	3,380	1,716	5,096
1910 ..	4,573	1,433	6,006	3,987	1,451	5,438	3,569	1,875	5,444	3,398	1,826	5,224
Ten Years, 1901–1910	54,212	14,055	68,267	35,728	16,928	52,656	34,853	19,096	53,949	34,156	18,183	52,339
Average Proportion per cent. of the yearly number of each class of Marriage registered in each Quarter	34·1	20·6	30·1	22·5	24·8	23·2	21·9	28·0	23·7	21·5	26·6	23·0

From the foregoing table it appears that the average proportion per cent. of all the marriages in Ireland which took place in the first quarter of the year was 30·1, while in the other quarters the percentages were respectively 23·2, 23·7, and 23·0; in other words the percentage was nearly constant during each of the last three quarters of the year. The table shows that the average proportion of Roman Catholic marriages during the first quarter of the year was 34·1 per cent. of the total marriages according to the rites of that Church, and that during the other three quarters the proportions varied from 21·5 to 22·5 per cent. only. The marriages of persons of other denominations were more numerous in the third than in any other quarter.

The distribution of marriages registered in Ireland is shown by Provinces and Counties in Table II., where the actual number registered in each area, and the average annual rate per 1,000 of the mean population, are given. The average marriage rates for the Provinces were—Leinster, 5·4; Munster, 4·8; Ulster, 5·6; Connaught 4·0; compared with 5·3, 4·2, 5·5, and 3·5 respectively for the previous decade, showing an increase in the rate for each province.

In the County Boroughs of Belfast and Dublin, the average annual marriage-rate was highest, being 7·6 and 7·5 respectively. The five counties which came next in order were :—Londonderry Co. and Co. Borough, 5·6; Dublin Co., 5·5; Antrim Co. and Armagh Co. each 5·4; and Down Co., 5·3. Those in which it was lowest were :—Clare Co., 3·6; Galway Co., 3·7; Mayo Co., 3·9; Roscommon Co., 4·0; and Queen's Co., 4·0.

Table V. shows for the decade the number and proportion per cent. of persons who signed their names in writing in the Registers, and of minors, of widowers, and of widows who were married.

TABLE V.—Showing as regards the MARRIAGES in Ireland and in each of the Four Provinces during the years 1901–1910, the Proportion per cent. of Persons who SIGNED THEIR NAMES, of Persons NOT OF FULL AGE, and of RE-MARRIAGES.

#### EDUCATION OF PERSONS MARRIED.

The proportion of persons who “signed their names in writing” as compared with those who signed “by mark” in the marriage registers and certificates affords an interesting indication of the degree of elementary education of persons married, and when these indications are compared from period to period they furnish a useful test of the progress of education. Thus—

In 1864, 61.4 per cent. of the men and 49.7 per cent. of the women signed in writing; in 1871 the proportions were—men 62.5 per cent., women 54.8 per cent.; in 1880, men 73.8 per cent., women, 69.1; in 1890, men 79.6, women 79.1; in 1900, men 86.8, women 89.3; in 1910, men 93.5, women 95.3. It is interesting to note that while there has been a steady increase in both sexes in the proportion signing by writing, the proportion among women, which was much below that for men in 1864, became equal to the rate for men in 1891, and has each year since exceeded it.

**EARLY MARRIAGES.**

During the last forty years there has been a well marked decrease in early marriages in Ireland. In the year 1864 of the males married 3·77 per cent. were under full age, in 1880 the proportion was 2·64 per cent., in 1890 it was 2·02 per cent., in 1900 it was 1·56 per cent., and in 1910 it was 1·51 per cent., having in 1906 dropped as low as 1·37 per cent. Among females the decrease of early marriages is more marked; in 1864 the proportion of minors was 18·16 per cent. of all the women married; in 1880 it was only 11·79 per cent., or less than two-thirds of the proportion in the former year; in 1890 it fell to 8·75 per cent., or less than one-half of the percentage for 1864; in 1900 it was only 6·84; and 6·28 in 1910. The highest proportion of minors married in 1910 was in Ulster, and the lowest in Connaught. In the former province the husbands who were not of age formed 1·91 per cent. of the males married, and the wives under age constituted 7·51 per cent. of the total; and in Connaught the corresponding percentages were 0·44 for the males and 3·61 for the females married. During the decade 1881–90 the proportion of marriages of minors in Connaught decreased among males from 2·51 per cent. in 1881 to 1·50 per cent. in 1890, and among females from 13·03 per cent. to 9·42 for the same years; during the decade 1891–1900 the proportion decreased among males from 0·72 per cent. in 1891 to 0·64 per cent. in 1900, and among females from 8·09 per cent. in 1891 to 4·65 per cent. in 1900; and in the decade under review the proportion per cent. among males remained nearly unchanged, namely, 0·43 in 1901 and 0·44 in 1910, but among females it declined from 5·20 in 1901 to 3·61 in 1910. It would thus appear that since 1864 through Ireland generally, and especially in the West, very early marriages have become less frequent.

---

**BIRTHS.**

The number of Births registered in Ireland during the decade was 1,023,352, being an annual average of 102,335, or at the rate of 23·1 per 1,000 of the mean population. The largest number of births occurred in the year 1904, viz., 103,811, or at the rate of 23·6 per 1,000 of the population, and the smallest number in 1901, when there were only 100,976 registered, or at the rate of 22·7 per 1,000 of the population.

Of the 1,023,352 Births registered in Ireland during the ten years 1901–1910, 996,685, or 97·4 per cent. were legitimate—this number being equivalent to an average annual rate of 22·5 per 1,000 of the mean population, and representing an average annual rate of 293·7 per 1,000 of the mean number of married women aged 15 and under 45 years.

As regards the distribution of the Births in Ireland, the following statement shows the four provinces arranged according to the average annual rate per 1,000 of the mean population represented by the births registered during the ten years 1901–1910:—

Provinces.		Birth-rate per 1,000.	Provinces.	Birth-rate per 1,000.
Ulster	..	24·0	Munster	.. 22·5
Leinster	..	23·3	Connaught	.. 21·7

## ILLEGITIMACY.

The 1,023,352 births registered in Ireland during the decade, comprised 26,667, or 2·6 per cent. which were illegitimate. In the preceding decennium the percentage was the same. The illegitimate births registered during the decennial period equalled an average yearly rate of 0·6 per 1,000 of the mean population, and were equivalent to an average annual rate of 3·9 per 1,000 of the mean number of unmarried women aged 15 and under 45 years.

In the following Table the proportion of illegitimate births is set out by Provinces.

TABLE VI.—Percentage of Illegitimate to Total Births in Ireland and each of the Provinces during the Ten Years, 1901–1910.

DIVISIONS.	PER-CENTAGE OF REGISTERED BIRTHS WHICH WERE ILLEGITIMATE.										
	Year.										Ten Years, 1901–1910.
	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.	
IRELAND ..	2·6	2·6	2·6	2·5	2·6	2·6	2·5	2·5	2·7	2·8	2·6
LEINSTER ..	2·7	2·8	2·6	2·6	2·7	2·7	2·7	2·6	2·6	2·8	2·7
MUNSTER ..	2·2	2·4	2·3	2·2	2·3	2·2	2·1	2·1	2·5	2·5	2·3
ULSTER ..	3·4	3·4	3·3	3·4	3·5	3·5	3·3	3·4	3·6	3·7	3·4
CONNAUGHT ..	0·7	0·7	0·5	0·7	0·7	0·7	0·6	0·7	0·7	0·7	0·7

From the foregoing (Table VI.) it will be observed that the proportion of illegitimate births to the total births registered was greatest in the Province of Ulster, where it reached 3·4 per cent., and least in the Province of Connaught, where the percentage was only 0·7. From Table VIII. it will be noticed that illegitimate births were proportionately more numerous in some of the districts comprising manufacturing towns. It is also observed that in the rural districts of Ulster and Leinster the percentage of illegitimate births is slightly below that in the civic districts, while in the other two provinces, where the rural population is more largely in excess of the town population than in either Leinster or Ulster, the difference between the rates for the civic and rural districts is more marked.

The number and relative proportion of births in each quarter are shown in Table VII., from which it appears that the birth-rate is higher in the first two than in the last two quarters of the year.

TABLE VII.—The Number of BIRTHS registered in Ireland during each QUARTER of the Ten Years, 1901–1910, with the Average Quarterly Numbers for that period, and the Annual Rates per 1,000 of the Mean Population represented thereby.

\* Unions or Superintendent Registrars' Districts containing Towns which in 1901 or in 1911 had a population of 10,000 or upwards.  
 † All Unions other than those specified in Note (\*).

Table VIII. has been constructed mainly with the view of showing the relation between the number of marriages registered and the number of legitimate births registered in Ireland, and in the more important groups of districts, distinguishing Civic districts from Rural districts.

Taking the whole of Ireland it will be observed that the average annual rate throughout the decade 1901–1910 per 1,000 of the mean population was—for marriages 5·1 and for births 23·1, and that the average number of legitimate births to each marriage registered was 4·4. For the previous decade, 1891–1900, the respective rates were 4·8, 23·0, and 4·6, showing an increase for the marriage-rate and the birth-rate, but a decrease for the average number of legitimate births to each marriage. In the decade 1881–1890 the rates were 4·3, 23·3, and 5·3 respectively, while in the decade 1871–80 the respective rates were 4·7, 26·5, and 5·5.

With regard to the number of legitimate births registered as compared with the number of marriages recorded, the four provinces come in the following order :—Connaught, 5·4 births to one marriage ; Munster, 4·6 ; Leinster, 4·2 ; and Ulster, 4·1, as compared with 4·4 for the whole of Ireland. Thus the provinces of Leinster and Ulster, with their large town population, are under the average of Ireland, while Munster and Connaught, with their large rural population, are over the average. It will be observed that the group with the highest rate is that comprising the rural districts of Connaught, where the ratio is 5·5, and the lowest are the civic groups of Leinster, Munster, and Ulster, where it is but 3·9.

If the relation between the number of legitimate births to marriages, and the death-rate of the population be compared, it will be found that where the death-rates are highest the proportion of births to marriages is lowest, and *vice versa*. A comparison between columns 6 and 10 of Table VIII. shows that this rule is almost invariable, and that it is most strongly marked in the contrast between town and country groups of districts.

The legitimate births have fallen from 1,027,126 for the decade 1891–1900 to 996,685 for the decade 1901–1910, being a decrease of 30,441, or 3·0 per cent., while during the same period the number of marriages rose from 221,608 to 227,211, being an increase of 5,603, or 2·5 per cent.

### DEATHS.

The deaths registered in Ireland during the decade 1901–1910 amounted to 767,256, a number equal to an average annual death-rate of 17·34 per 1,000 of the population ; but, as will be seen further on, the variations in death-rate were very great in different parts of the country. The death-rate also varied considerably during different years of the decade ; thus in 1904 it was 18·0, but in 1906 it was only 16·9 per 1,000.

TABLE IX.—The number of DEATHS registered in Ireland during each QUARTER of the Ten Years, 1901–1910, with the Average Quarterly Numbers for that period, and the Annual Rates per 1,000 of the Mean Population represented thereby.

QUARTER ENDING	YEARS, AND NUMBER OF DEATHS REGISTERED.										Averages for Ten Years 1901–1910.	Equiv- alent Average Annual Rate per 1,000 of of Mean Popula- tion.	Average per- centage of Annual Number Deaths registered in each Quarter.

The above Table shows the number of deaths registered in each quarter during the decade, with the average rates for the ten years, and the average percentage of deaths registered during each of the four quarters. The average percentage of the annual number of deaths registered for the first quarter was 29·3, and the average annual rate represented 20·3 per 1,000 of the mean population ; for the second, 26·5 per cent., with a rate of 18·3 per 1,000 ; for the third, 20·7 per cent., with a rate of 14·3 per 1,000 ; and for the fourth quarter, 23·5 per cent., with a rate of 16·3 per 1,000, the highest rate being in the first quarter, when the cold weather and the continued privations of the winter months have the greatest effect on the health of the people.

#### DISTRIBUTION OF DEATHS IN IRELAND.

Arranging the provinces from the lowest death-rate to the highest, it appears that the average annual rates per 1,000 living were as follow :—

Connaught .. ..	14·2	Ulster .. ..	18·1
Munster .. ..	16·2	Leinster .. ..	19·0

In the following statement the counties are arranged in order according to their death-rates from the lowest to the highest:—

## IRELAND, 17·3.

It will be here again observed that the county boroughs and the counties containing large towns occupy unfavourable positions on the list.

This is especially noticeable when Mayo and Dublin Co. Borough, which occupy the extremes of the list, are contrasted with one another; the rate of mortality in the former being 46 per cent. below that in the latter.

Statistics for the Urban Districts of Ireland are shown in Tables X. and XI., pages xix and xx; but in the first table particulars for the Dublin Registration Area and the twenty-one principal Urban Districts are shown separately.

The average annual birth and death-rates in the Dublin Registration Area and twenty-one principal Urban Districts were 28·7 and 20·6 respectively per 1,000 of the mean population, and in the remaining Urban Districts these rates were 23·8 and 17·6.

TABLE X., compiled from the Weekly Returns furnished by the various Registrars, shows the number of BIRTHS and DEATHS registered during the Ten Years, 1901-1910, in the Dublin Registration Area, and in each of the undermentioned Twenty-one Urban Districts (exclusive of Deaths in Public Institutions of persons admitted from other localities), with the number of Deaths from some of the principal causes.  
 [The deaths are exclusive of those occurring in Public Institutions of persons admitted, and also of Infants whose mothers were admitted from places outside the respective areas and the rates are based on the numbers so determined.]

C 2

of Marriages, Births, and Deaths in Ireland.

URBAN DISTRICTS.

Separate statistics for the Urban Districts, compiled from Weekly and Quarterly Numerical Returns furnished by the various Registrars, are given in Table XI.

The average annual death-rate per 1,000 of the mean population (1900-1911) in these districts which contain more than one-fourth of the total population of the country, was 20·0, and the birth-rate 27·7; in the remainder of the country the death-rate was 16·1, and the birth-rate 21·1 per 1,000.

The average annual rates represented by the deaths from the Epidemic Diseases† shown in this Table were:—For the Urban districts 1·6 per 1,000 of the mean population of the ten years; and for the remainder 0·6 per 1,000.

TABLE XI.—BIRTHS and DEATHS registered during the TEN YEARS, 1901-1910, in the DUBLIN REGISTRATION AREA, and in each of the PROVINCIAL URBAN DISTRICTS in IRELAND (exclusive of Deaths in Public Institutions of Persons admitted from other localities), with the number of Deaths from certain EPIDEMIC DISEASES.†

NOTE.—“The Dublin Registration Area” consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown. The details for it and for each of the twenty-one Urban Districts marked thus (\*) in the following Table have been compiled from the Weekly Returns furnished by the Registrars.

NOTE.—The Boundaries of Tullamore, Bangor, Carrickmacross, Cookstown and Monaghan were extended during the decade, and the figures given at (a) and (b) respectively are for the Districts as existing prior to and subsequent to the extension. The information for the extended areas at (b), is for the following years:—Tullamore, 1904-1910 inclusive; Bangor, 1905-1910; Carrickmacross, 1906-1910; Cookstown, 1907-1910; and Monaghan, 1906-1910; The information for the Urban Districts constituted during the decade is for the following years:—Macroom, 1902-1910; Mallow, 1903-1910; Keady, 1904-1910; Ballyclare, 1906-1910; Donaghadee, 1906-1910; and Newcastle, 1906-1910.

† See note (†) page xx.

‡ See note (‡) page xx.

CAUSES OF DEATH.

EPIDEMIC DISEASES.\*

Of the 767,256 deaths from all causes registered in Ireland during the ten years 1901-1910, 40,561, or 5.3 per cent., were caused by the principal Epidemic Diseases,\* a number equal to an average annual rate of 9.2 per 10,000 of the mean population. The total number of deaths from these diseases for the four complete decades for which records are available is 283,663, or 8.2 per cent. of the deaths from all causes. In the decade 1891-1900, the number was 57,338, or 6.9 per cent. of all the deaths registered, and equal to an annual rate of 12.5 per 10,000 of the mean population. In the decade 1881-1890, the deaths numbered 70,717, or 8.0 per cent. of the total deaths, and were equal to an annual average rate of 14.3 per 10,000 of the mean population. In the decade 1871-1880 there were 115,047 deaths from this group of diseases, which number was 11.9 per cent. of the total deaths during that period, and equalled an annual average rate of 21.7 per 10,000.

It will be seen from the following comparative tabular statement that, with the exception of deaths from diphtheria, the absolute number of deaths from each of the principal Epidemic diseases during the decade now under review was less than that for the three preceding decades, and that, as shown in the figures given above, there has been a great decline in the mortality from these causes taken collectively.

STATEMENT showing the Number of Deaths in Ireland and the Annual Death-Rate per 10,000 of the mean Population, from all Causes, and from each of the principal Epidemic Diseases in each of the Decennial Periods 1871-1880, 1881-1890, 1891-1900, and 1901-1910.

1891-1900	836,035	182.5	235	0.1	8,095	1.8	4,422	1.0	1,904	0.4	12,048	2.6	3,440	0.7	1,279	0.3	8,692	1.9	17,223	3.7	57,338	12.5
1901-1910	767,256	173.4	65	0.0	6,678	1.5	1,597	0.4	680	0.2	10,474	2.4	3,535	0.8	388	0.1	4,567	1.0	12,577	2.8	40,561	9.2

When the average death rates for Urban Districts of Ireland are compared with those for Rural Districts, it is found that the observation made in previous Decennial Reports, with regard to the much higher death-rate from these causes, taken collectively, in the urban than in rural districts, still applies, the average annual rate for the urban districts during the last Decennium being 16.2 per 10,000 of the mean population, against 5.9 per 10,000 for the remainder of the country.

Although influenza is not included in the "principal Epidemic diseases," the number of deaths from this cause has so varied in the four Decennial periods as to be worthy of remark. In the decade 1871-1880, only 972 deaths were assigned to influenza; from 1881 to 1890, 2,096 deaths were returned; in the decade ending with the year 1900, the deaths amounted to 20,805, and in the ten years 1901-1910 the number was 13,726

\* See note (†) on page xx.

† Formerly described as "Simple Continued Fever."

The following TABLE (XII.) shows (1) the Number of Deaths from All Causes, and from with the Average Annual Number for the ten years, and (2) the respective

"Simple Continued Fever."  
for the average on the mean of the Census Populations, 1901 and 1911.

## GENERAL DISEASES.

*Small-pox.*—The deaths from small-pox registered in Ireland during the ten years, 1901-1910, numbered only 65, which is equivalent to an average annual rate of 0·1 per 100,000 of the mean population. In the Decennium 1871-1880 the deaths from this cause amounted to 7,550; in the following ten years 241, and for the ten years 1891-1900 they were 235.

Of the 65 deaths registered during the period under notice, 19 were of persons stated to have been vaccinated, 42 were of unvaccinated persons, and concerning the remaining 4, the condition as to vaccination was not stated. In the year 1903 there were 40 of the deaths registered, 16 in 1904, 5 in 1905, 2 in 1901, and 1 in each of the years 1902 and 1907. 33 of the deaths occurred in the Union of South Dublin, and 10 in Lisburn.

From page 19 of the Abstracts it appears that there were 903,591 cases of successful primary vaccination in Ireland during the ten years, 1901-1910, which was 88·3 per cent. of the births registered during that period.

Of the 8 deaths which were attributed to cow-pox, 6 were of infants under one year of age.

*Chicken-pox.*—Of 62 deaths resulting from chicken-pox 25 were deaths of males and 37 of females; 58 of these deaths were of children under 5 years of age.

*Measles.*—From the abstracts of diseases and causes of death commencing on page 42, it can be seen that the number of deaths accounted for by measles during the decennial period was 6,678; this figure represents an average annual rate of 1·5 per 10,000 of the mean population of Ireland. Of the total deaths, 3,427 were of males and 3,251 of females. An examination of the ages at death shows that 5,686, or 85 per cent., of the total number of deaths from this cause were of children under 5 years of age.

The geographical occurrence of mortality from the principal causes or groups of diseases is given in the Abstracts commencing on page 50. It may be seen that of deaths from this cause, 2,241 occurred in the Union of Belfast, 700 in the Union of Dublin South, and 492 in Dublin North. In other words, more than 50 per cent. of the deaths from this cause occurred in these three principal urban unions, whose total mean population forms only 17·7 per cent. of the mean population of Ireland for the decennial period, 1901-1910.

*Scarlet Fever.*—The deaths from scarlet fever in Ireland during the decade 1871-1880 amounted to 23,077, being equal to an annual rate of 4·4 per 10,000 of the mean population; in the following decade the deaths fell to 10,311, and the rate was 2·1 per 10,000; in the decade 1891-1900 the number of deaths further declined to 4,422, and the rate to 1·0 per 10,000 of the population; and in the decennium 1901-1910 the number of deaths from this cause still further declined to 1,597, being at the rate of 0·4 per 10,000 of the mean population. Of the 1,597 deaths registered during the period under notice, 774 were of males, and 823 of females; and 790 of the total, or nearly half, were deaths of children under five years of age.

It may be seen in the abstracts that of the total deaths from scarlet fever, 270 were registered in the union of Dublin, South.

*Typhus.*—There were only 680 deaths (360 males and 320 females) from typhus registered in Ireland during the ten years 1901-1910, which number is equivalent to an average annual rate of 1·54 per 100,000 of the mean population, as compared with 1904 deaths, with a rate of 4·16 per 100,000 in the previous decade; 5,457, with a rate 11·05 in the decennial period 1881-1890, and 7,495, with a rate of 14·17 in the 10 years 1871-1880. In Table XIII., on page xxviii particulars are given of the number of deaths from typhus at each of 11 age periods, and also the average rate per 100,000 of the living at same age. Of the 680 deaths attributed to typhus, 49 occurred in the Union of Galway.

*Whooping-cough.*—The number of deaths from whooping-cough registered during the decennium was 10,474, or at an average annual rate of 2·4 per 10,000 of the mean population. In the preceding decade there were 12,048 deaths from this disease, the rate being 2·6 per 10,000.

As regards the ages of the 10,474 persons who died from whooping-cough, those under one year of age numbered 4,661, constituting about 44 per cent. of the total, and the deaths of children under 5 years were 9,752, or 93 per cent. of the total, and equal to an annual rate of 22·2 per 10,000 of the living at that age.

Of the 10,474 persons who died from whooping-cough, 4,765 were males and 5,709 females, the death rate for males being 2·2 per 10,000 and for females 2·6. This heavy mortality among females is not peculiar to the decade now under consideration; it is shown also in each of the three preceding decennia. Calculating from deaths of children under 10 years of age—during which period of life the great bulk of the deaths from whooping-cough occur—we find that in the 10 years ending with 1880 the average annual rate per 10,000 of the mean number of boys of that age in the population, represented by the deaths of males under 10 years old from whooping-cough, was 13·0, while the corresponding rate for girls was 16·5; for the 10 years 1881-1890 the respective average rates were:—boys, 11·4 per 10,000, girls, 14·7; for the decade ending with 1900 they were:—boys, 11·1, and girls, 14·5; and for the 10 years 1901-1910:—boys, 10·6, and girls, 13·0.

*Diphtheria.*—Taking the absolute numbers, there was but very slight variation in the mortality from diphtheria during the last four decades, the number of deaths for the 10 years 1871-1880 being 3,403, for the following 10 years 3,465, for the decade 1891-1900 3,440; and for the last 10 years 3,535; however, in relation to population, the mortality shows a decided tendency to increase, the average annual rate for the first period being 64; for the second, 70; for the third, 75; and for the fourth, 80 per million of the population.

Of the 3,535 deaths (1,801 males and 1,734 females) from diphtheria, 2,024, or 57 per cent., were of children under 5 years of age, the average annual rate represented being 4·6 per 10,000 children living at that age period. The deaths during the age period 5 and under 10 years numbered 1,006, or 28 per cent. of the total, the rate being equal to 2·3 per 10,000 children of that age in the population.

Under the heading diphtheria are included both deaths returned from diphtheria and those returned as from membranous croup. In cases of deaths which are returned in the certificates as from *croup*, further inquiry is made as to whether the *croup* was of a diphtheritic character or otherwise.

*Enteric Fever.*—A marked decrease in the deaths from enteric fever, both numerically and relatively is shown for the 10 years 1901-1910, as compared with the three previous decades—in the ten years 1871-1880 the number of deaths attributed to this cause was 9,746, with an annual rate of 18·41 per 100,000 of the mean population; in the following ten years the number dropped to 7,995, with a rate of 16·18, and rose for the period 1891-1900 to 8,692, with a rate of 18·97; and in the ten years 1901-1910 decreased to 4,567, with an average annual rate of 10·32 per 100,000. In Table XIII. the number of deaths and death-rate from enteric fever is shown for 11 age periods; it will be seen that the death-rate is highest among persons between 20 and 25 years of age.

#### FEVERS.

Altogether the number of deaths from the several forms of fever—typhus, enteric (typhoid) and pyrexia (origin uncertain)—registered in Ireland during the decade 1901-1910 was 5,635, the totals for the preceding decades being 11,875 for the years 1891-1900, 18,067 for the years 1881-1890, and 30,092 for the years 1871-1880. The annual rates represented by the total mortality from these causes in each succeeding decade, beginning with the ten years 1871-80, were 56·88, 36·57, 25·92, and 12·74 per 100,000 of the mean population. From these figures the fact is deduced that allowing for the decrease in the population, the death-rate from fevers during the Decennium ending with the year 1910 shows a decline of 78 per cent. when compared with that for the 10 years 1871-1880.

TABLE XIII.—DEATHS at each of ELEVEN AGE-PERIODS from the several forms of Fever registered in Ireland during the Ten Years 1901-1910, with the Ratio of the average annual number of these Deaths to every 100,000 of the living at the same age ; also the total deaths at all ages and the ratios for the two previous decades.

\* Formerly described as "Simple Continued Fever."

*Diarrhoeal Diseases.*—The total of deaths from diarrhoeal diseases, namely, 12,577 (6,547 males and 6,030 females) was equal to an average annual rate of 2·8 per 10,000 of the mean population. The total includes deaths which were attributed in medical certificates to epidemic diarrhoea, *diarrhoea*, dysentery, and diarrhoea due to food, which were respectively 3,820, 8,336, 363, and 58.

From the Abstracts, page 42, it may be seen that 8,494 of the deaths, or 68 per cent., were of children under 2 years of age ; there were also registered at this age period the deaths of 2,070 children from enteritis and 1,937 from *gastro-enteritis*.

Of the total deaths from diarrhoeal diseases 2,789 were registered in Belfast Union, 652 in Cork Union, 1,350 in the Union of Dublin, North, 1,423 in the Union of Dublin, South, 179 in Limerick Union, 348 in Londonderry Union, and 271 in Waterford Union ; in all, 7,012 deaths, or about 56 per cent. of the total, were registered in these unions which contain the 6 county boroughs, although the aggregate population of the above-mentioned unions only represents 25 per cent. of the mean population of Ireland

*Cerebro-spinal Fever.*—The deaths of 1,061 persons were attributed to this cause during the 10 years 1901-1910 ; of these 579 were of males and 482 of females. 631 of these deaths occurred in the year 1907 ; 495 appertaining to Belfast County Borough. Detailed information concerning this epidemic is published in the Annual Report of the Registrar-General for the year 1907.

*Influenza*.—The incidence of the mortality recorded in Ireland from the *disease* known as *influenza* is worthy of study. In the decade 1871-1880 there were only 972 deaths thus registered, being an average annual mortality at the rate of only 0·2 per 10,000 of the population, and in the whole period from the commencement of death registration in Ireland, in 1864, up to the year 1890, the average number of deaths so assigned was only 103 per annum.

During those years there was not any epidemic of influenza in Ireland, but in the year 1890, the disease assumed a serious form, and prevailed as an epidemic, causing 1,712 deaths, or 3·6 per 10,000 of the estimated population.

In the decade 1891-1900 the number of deaths from influenza recorded amounted to 20,805 (males 10,067; females 10,738) which corresponds to an average annual rate of 4·5 per 10,000 of the population.

In the ten years 1901-1910 the number of deaths decreased to 13,726 (males 6,520, females 7,206), the rate also declining to 3·1 per 10,000 of the mean population.

A reference to the Abstracts which give the deaths by age-periods shows that although at no age is there exemption from this disease, the deaths appear to increase in number among persons over 25 years of age, the greatest number occurring between 65 and 75 years. The abstracts commencing on page 50 give the deaths from influenza by provinces, counties, and unions, and Table XIV. gives by provinces and counties the number of deaths registered in Ireland from influenza at each of 5 age-periods during the years 1901-10, with the rate per 10,000 of the mean population represented by the deaths at all ages. The death-rate from influenza for the province of Leinster was 0·32 per 1,000. The highest county-rate in this province was in King's, namely 0·52 per 1,000, and the lowest in Kildare, 0·24 per 1,000. In Munster the rate was 0·21 per 1,000, the highest rate being for Tipperary, N.R., 0·29 per 1,000, and the lowest in the county Clare, 0·11 per 1,000, which was also the lowest county-rate for Ireland. The rate in Ulster was 0·35 per 1,000, the highest county-rate, 0·58 per 1,000, being in Tyrone, and the lowest, 0·13 per 1,000, in Belfast county borough. In Connaught the rate was 0·34 per 1,000, the rate for the county Leitrim being 0·49, which was the highest county death-rate from influenza in the province, and the lowest rate was in Mayo, namely, 0·30 per 1,000.

TABLE XIV.—Showing, by Provinces, Counties, &c., the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the 10 years 1901-1910, with the rate per 10,000 of the population\* represented by the deaths at all ages.

*Rabies (Hydrophobia).*—No mortality from hydrophobia has been recorded during the 10 years 1901-1910. In the preceding decade 35 such deaths were registered, 4 occurring in the year 1898, the last year in which there was any mortality from this cause.

*Puerperal Septic Diseases.*—The deaths assigned to puerperal septic conditions were 2,125 during the 10 years 1901-1910, as compared with 3,357 during the decennial period 1881-1890, and 2,849 during the period 1891-1900. The annual rates per 10,000 married women between the ages of 15 and 55 years being for the period 1881-1890, 6·2; for 1891-1900, 5·8; and for 1901-1910, 4·6.

Of the total deaths, 1,270 were referred to puerperal septicæmia, 70 to puerperal pyæmia, 113 to phlegmasia alba dolens, and 672 to *puerperal fever*.

The comparative death-rates for the above group during each of the 10 years 1901-1910 are given in table xxi., in the paragraph on the mortality of women during pregnancy and child-birth, page xli.

*Septicæmia, &c.*—There were 809 deaths from septicæmia, of males 487, and of females 322; there were 1,131 deaths from erysipelas, of males 598, and of females 533; the deaths of 296 persons, 181 males and 115 females, were attributed to pyæmia; to *phlegmon* or *carbuncle*, 793 deaths were variously assigned, 512 of males and 281 of females; there were 24 deaths from phagedæna, 11 males and 13 females, and 345 deaths were classified under the heading of other infective processes.

*Pneumonia.*—The designation pneumonia includes all deaths registered as from lobar pneumonia, broncho-pneumonia, epidemic pneumonia, and *pneumonia* (not otherwise defined); in the aggregate these deaths numbered 38,540, being equivalent to an average annual rate of 8·7 per 10,000 of the mean population, as compared with 19,718, with a rate of 3·7 for the decade 1871-1880; 27,576, with a rate of 5·6 for 1881-1890; and 35,080, with a rate of 7·7 for 1890-1900.

Of the total deaths, 1,722 (of males, 1,081, and of females, 641) were from lobar pneumonia; 11,826 (of males, 6,207, and of females, 5,619) were from broncho-pneumonia; there were 8 deaths of males and 5 of females registered as from epidemic pneumonia, and 24,979 (of males, 15,009, and of females 9,970) as from *pneumonia* (not otherwise defined). Of the 1,722 deaths from lobar pneumonia, 214, or less than 13 per cent., were of children under 5 years of age, and of 11,826 deaths from broncho-pneumonia, 6,530, or over 55 per cent., were of children under 5 years of age. Of the total deaths (38,540) from pneumonia in the 10 years 1901-1910, there were 6,255 registered in Belfast Union, 1,643 in Cork Union, 2,893 in the Union of Dublin, North, 3,326 in the Union of Dublin, South, 597 in Limerick Union, 501 in Londonderry Union, and 344 in Waterford Union; these figures in the aggregate amount to 15,559, and constitute about 40 per cent of the total deaths from all forms of pneumonia.

TUBERCULOSIS.

TABLE XV.—In the table which follows the statistics for the total Tuberculosis mortality in Ireland are given for four decennial periods, also for Pulmonary Tuberculosis, Tuberculous Meningitis, Tuberculous Peritonitis, and Tabes Mesenterica and for other forms of Tuberculosis, with the respective annual average rates per 10,000 of the population represented thereby.

DECADE.	DEATHS FROM TUBERCULOSIS IN IRELAND.									
	Phthisis.		Tuberculous Meningitis.		Tuberculous Peritonitis and Tabes Mesenterica.		Other forms of Tuberculosis.		TOTAL.	
	Number.	Average Annual Rate per 10,000.	Number.	Average Annual Rate per 10,000.	Number.	Average Annual Rate per 10,000.	Number.	Average Annual Rate per 10,000.	Number.	Average Annual Rate per 10,000.
1871-1880	103,528	19·5	11,076	2·1	13,618	2·6	9,336	1·8	137,558	26·0
1881-1890	103,314	20·9	9,458	1·9	10,596	2·2	8,288	1·7	131,656	26·7
1891-1900	97,382	21·3	9,825	2·1	9,887	2·1	9,928	2·2	127,022	27·7
1901-1910	89,407	20·2	7,424	1·7	5,296	1·2	14,139	3·2	116,266	26·3

It appears from this table that in the decade 1871-1880 the death-rate was 26·0 per 10,000; in the decade 1881-1890 it rose to 26·7, again rising in the decade 1891-1900 to 27·7, and in the period under review declined to 26·3 per 10,000.

Particulars regarding the numbers and mortality rates for the several years of the decade are contained in the statement which follows showing the annual percentage of increase or decrease in the mortality from this cause.

TABLE showing the number of Deaths from all forms of Tuberculous Disease registered in Ireland during the Years 1901-1910, with the number of Deaths from Tuberculous Phthisis and the respective rates per 1,000 of the population represented thereby.

YEARS.	Deaths from all forms of Tuberculous Disease.		Deaths from Tuberculous Phthisis ( <i>Phthisis</i> ).	
	Number.	Rate per 1,000.	Number	Rate per 1,000.
1901 .. ..	12,335	2·8	9,549	2·1
1902 .. ..	11,837	2·7	9,400	2·1
1903 .. ..	12,180	2·8	9,559	2·2
1904 .. ..	12,694	2·9	9,833	2·2
1905 .. ..	11,882	2·7	9,216	2·1
1906 .. ..	11,756	2·7	8,933	2·0
1907 .. ..	11,679	2·7	8,828	2·0
1908 .. ..	11,293	2·6	8,511	1·9
1909 .. ..	10,594	2·4	8,051	1·8
1910 .. ..	10,016	2·3	7,527	1·7
Average of Ten Years	11,627	2·6	8,941	2·0

In the first year of the decade 1901-1910 the rate for all forms of tuberculosis was 2·8 per 1,000; in the year 1902 it was 2·7, rising to 2·8 in 1903, and again rising to 2·9 in 1904 (this was the highest death-rate from tuberculosis which has been recorded in Ireland; it also reached this point in each of the following years 1880, 1897, 1898, and 1900). In 1905 the rate fell to 2·7 per 1,000; this rate was repeated in the two following years, and in 1908 the rate declined again to 2·6, in 1909 it further declined to 2·4, and in 1910, the last year of the decennium, the rate was 2·3 per 1,000, the lowest recorded rate for tuberculosis in Ireland up to that date (see Annual Reports for each year of the decade).

In Table XV., page xxxi., may be seen that of the total deaths from tuberculosis, 89,407 were from tuberculous phthisis, 7,424 were from tuberculous meningitis, 5,296 were caused by tuberculous peritonitis or *tuberculosis mesenterica*, and 14,139 deaths were caused by other forms of tuberculosis, *scrofula*. The respective annual rates for these forms of tuberculosis are also given.

It is in the direction of improvement that from the year 1904 there has been a downward tendency in the mortality rate from tuberculosis, as may be seen in the following tabular statement.

The following tabular statement shows the total number of deaths from all forms of Tuberculous disease in Ireland for each of the ten years 1901-1910, with the rates per 1,000 of the population represented thereby, the increase and decrease in the number of deaths as compared with the previous year, and the percentage of such increase or decrease.

YEARS.	All forms of Tuberculous Disease.					
	Total Number Total of Deaths.	Rate per 1,000 of population.	Increase.		Decrease.	
			Number.	Per cent.	Number.	Per cent.
1901 .. ..	12,335	2·8	—	—	—	—
1902 .. ..	11,837	2·7	—	—	498	4·0
1903 .. ..	12,180	2·8	343	2·9	—	—
1904 .. ..	12,694	2·9	514	4·2	—	—
1905 .. ..	11,882	2·7	—	—	312	6·4
1906 .. ..	11,756	2·7	—	—	126	1·1
1907 .. ..	11,679	2·7	—	—	77	0·7
1908 .. ..	11,293	2·6	—	—	386	3·3
1909 .. ..	10,594	2·4	—	—	699	6·2
1910 .. ..	10,016	2·3	—	—	578	5·5

It can be gathered from this table that the mortality in 1910 from tuberculosis has decreased by 21·1 per cent., as compared with 1904, or, in other words, there were 2,678 fewer deaths from tuberculosis in the year 1910 than in the year 1904.

Respecting the ages at which deaths from pulmonary tuberculosis occur, a table is presented, showing by sexes the number of deaths and the death rate for certain age-

periods. It is remarkable that in the earlier age-periods the deaths of females preponderate over those of males; in the 5th age period the rates are nearly equal—3·58 for males between the ages of 20 and 25 years, and 3·57 for females at that age-period. In the next age-period, namely from 25-35 years, the highest death-rate obtains for males and also for females, namely 4·11 and 3·70 respectively; in the succeeding periods the mortality of males is in every case in excess of that of females. In the age-period 35-45 years, the rate for males is 3·04 and for females 2·91; in the age-period 45-55 years the rate for males is 2·37 and for females 1·89; in the 55-65 age-period the male rate was 1·89 and the female 1·34; in the succeeding period, 65-75 years, the rate for males was 0·99 and for females 0·67; and of males over 75 years the rate was 0·29, and of females over 75 years it was 0·22.

TABLE XVI.—Showing the Deaths from Tuberculous Phthisis (*Phthisis*) for the Ten Years 1901-1910, and the Average Annual Death-rates given by Sexes and Age-Periods:—

Age-Periods.	Deaths from Tuberculous Phthisis ( <i>Phthisis</i> ) in Ireland.					
	Total of both Sexes.		Of Males.		Of Females.

75 and upwards ..	278	0·25	154	0·29	124	0·22
Total all ages ..	89,407	2·02	44,000	2·00	45,407	2·04

The average annual rate for tuberculous phthisis in the decade was 2·02 per 1,000, that for males being 2·00 and for females 2·04 per 1,000 of the mean population.

In Table XXVIII., on page xlix., information is given regarding the mortality of inhabitants of the Dublin Registration Area by occupations. The death-rate from pulmonary tuberculosis among the professional and independent classes was 1·02 per 1,000; among the middle class, 1·70 per 1,000; among the artisan and petty shopkeepers, 2·49 per 1,000; and among general service class, 2·55 per 1,000.

The lowest divisional death-rate from phthisis was among the merchants and manufacturers of the higher class, namely, 0·23 per 1,000, and the highest rate was found to exist among hawkers, porters, and labourers among the general service class, amounting to 3·05 per 1,000 of the population in this class.

The number of deaths from the several forms of tuberculous disease are given in the abstracts commencing on page 42, by sexes, and in the following abstracts commencing on page 50 the numbers of deaths from the above are given by unions, counties, and provinces. From these figures it is calculated that the average death-rate from all forms of tuberculous disease was, in Leinster, 30·6 per 10,000, in Munster, 26·0 per 10,000; in Ulster, 26·5 per 10,000; and in Connaught, 18·2 per 10,000.

In the tabular statement which follows, the deaths from pulmonary tuberculosis, tuberculous meningitis, tuberculous peritonitis and tabes mesenterica, and other forms of tuberculosis, are given, with the total deaths from all forms of tuberculosis and the mean rate per 1,000 represented thereby for the Provinces and Counties of Ireland.

TABLE XVII.—Deaths from Tuberculous Phthisis and Phthisis, Tuberculous Meningitis, Tuberculous Peritonitis, Tabes Mesenterica, and other forms of Tuberculosis, Scrofula, registered in each Province and County during the Ten Years 1901-1910, with the Total Deaths from all Forms of Tuberculosis and the Average Annual Rate per 1,000 of the Mean Population represented thereby.

IV. PROVINCE OF CONNAUGHT.							
Galway .. ..	187,387	3,043	142	101	271	3,557	1·90
Leitrim .. ..	66,462	879	44	37	158	1,118	1·68
Mayo .. ..	195,672	2,804	90	101	265	3,260	1·67
Roscommon .. ..	97,873	1,424	81	41	146	1,692	1·73
Sligo .. ..	81,564	1,532	54	45	189	1,820	2·23

From this table it appears that the highest county rate for the province of Leinster was in Dublin county borough, namely, 4·47 per 1,000; this is also the highest county death-rate for the whole of Ireland. The lowest county rate in the province of Leinster was in Co. Longford, namely, 1·84 per 1,000 of the mean census population.

In Munster the highest death-rate was in Cork county and county borough, 2·99 per 1,000, and the lowest county rate was in Tipperary N.R., 1·76 per 1,000. In the province of Ulster, Belfast county borough had a rate of 3·63 per 1,000, the highest rate for that province, the lowest rate being recorded for the county of Cavan, namely 1·51 per 1,000, the lowest county death-rate for the whole of Ireland.

In Connaught the highest rate recorded was in Sligo, 2·23 per 1,000, and the lowest in Mayo, 1·67 per 1,000.

ALCOHOLISM.

The statistics of mortality from alcoholism are presented in Table XVIII., deaths from cirrhosis of the liver being included therein. For both these causes of death there is an aggregate increase when compared with preceding decennial periods.

Table XVIII., which follows, shows for each of the years 1901-1910 the deaths from alcoholism and cirrhosis of the liver by sexes, and the totals for the ten years, with comparative totals for the three preceding decades.

\* Cirrhosis of Liver not shown for 1871-1880.

Although this table shows an increased mortality from the combined causes of alcoholism and cirrhosis of the liver, it is possible that this is more apparent than real, as many causes of a statistical character tend to increase mortality figures, for instance, increase and care in certification of deaths, also the tendency to more exact methods of collecting statistics, and the system of making enquiries for further information in doubtful causes of death. Moreover, during the decennial period 1901-1910 deaths by accident when in connection with alcoholism were classified to the latter cause. Even with these circumstances, which have had a tendency to increase the mortality figures for alcoholism, there is reason to believe that these fall far short of the true number of deaths which are really attributable to the misuse of alcoholic beverages.

The rates for mortality from alcoholism, delirium tremens, and cirrhosis of liver were, for the decade 1881-1890, 0·75 per 10,000, for the decade 1891-1900, 0·93 per 10,000; and for the decade 1901-1910, 1·14 per 10,000 of the respective average mean population of the country at each decennial period.

*Rheumatic Fever; Rheumatism.*—Under the various headings rheumatic fever, acute rheumatism, *rheumatism of heart*, chronic rheumatism, rheumatic arthritis, and *rheumatic gout*, a total of 7,275 deaths were classified; of these 3,149 were deaths of males and 4,126 were deaths of females. The above total represents an annual rate of 0·16 per 1,000 of the mean population, and the deaths of males and of females represent the respective rates of 0·14 per 1,000, and 0·19 per 1,000 of the mean male and female population.

*Gout.*—Of 132 deaths attributed to gout, 87 were of males and 45 were of females.

#### MALIGNANT DISEASE.

The number of deaths from cancer registered during the ten years 1901-1910 was 32,447 (of males 14,717, and of females, 17,730); this total of deaths includes 9,321 (4,069 males and 5,252 females) attributed to carcinoma; 1,423 (761 males and 662 females) attributed to sarcoma; and 21,703 (9,887 males and 11,816 females) returned as from cancer or malignant disease (undefined).

The steady increase in the number of deaths from cancer is a subject for serious consideration. In the decennial period 1871-1880 the deaths of 17,790 persons were attributed to this cause, 7,789 being of males and 10,001 of females; in the ten years 1881-1890 the deaths numbered 20,036 (8,964 males and 11,072 females); in the following decade the number of deaths rose to 24,435 (of males 11,062 and of females 13,373); and in the period now under review the number has again considerably increased, being 32,447 (of males 14,717, and of females 17,730). The death-rates from cancer during these four decennial periods show that the relative increase in the mortality from cancer is of considerable proportions; for the first decade the average annual rate per 10,000 of the mean population was 3·4, for the second 4·1, for the third 5·3, and for the fourth 7·3.

The increase in the number of deaths from cancer may be partly accounted for by more accurate methods of diagnosis in those cases by the medical profession, and also by the enquiries made for the purpose of ensuring accurate statistics regarding deaths returned as having been caused by tumours and other ill-defined conditions. It is of interest to report that the letters of enquiry addressed to the medical practitioners who certified in the latter cases, have resulted in the removal of a considerable number of deaths from causes of a more or less doubtful nature, and their transference to one or other of the divisions of malignant disease.

In Table XIX. the deaths from cancer are arranged by age-periods, by sexes, and by parts affected, rates being given for males and females living at each age-period. Among males the highest rate appears amongst persons aged 75 years and upwards, namely, 3·8 per 1,000, the highest rate among females (3·2) being at the same age-period. In the first two age-periods, which contain all persons under 25 years of age, the mortality of males and females is nearly the same, while in the next three periods (persons of 25 and under 65 years) the female mortality exceeds that of the male; but at both of the age-periods 65 to 75 years, and 75 years and upwards, the mortality of males was greater than that of females.

AVERAGE ANNUAL DEATH RATES PER 10,000 OF THE MEAN POPULATION.													
1901-1910 ..	9.7	0.2	19.1	7.2	21.0	8.8	0.2	4.4	0.3	0.8	0.3	0.2	72.2

Some of the special diseases of each class will be dealt with in the following paragraphs.

*Meningitis*.—There were 8,115 deaths from meningitis during the decennial period 1901-1910; of this number 4,324 were deaths of males and 3,791 were deaths of females.

*Softening of the Brain*.—To this condition the deaths of 850 males and 811 females were attributed.

*General Paralysis of the Insane*.—There were 761 deaths returned as having been caused by general paralysis of the insane during the decennial period; of this number 612 were deaths of males and 149 of females.

*Epilepsy*.—Under the heading of epilepsy, 3,170 deaths were classified, 1,710 of the total being deaths of males and 1,460 deaths of females.

*Convulsions*.—The deaths attributed to convulsions, which in the decade 1871-1880 numbered 38,810, decreased in the following decade to 30,490, and further decreased in the decade ending with the year 1900 to 23,275. The period now under review shows a still further falling off in the number of deaths returned as from this cause—the total deaths being 15,286.

An improvement in the matter of certification and registration of the causes of death is evidenced by this fact and also by the substantial relative and absolute reduction in the number of deaths said to be due to convulsions, as shown by the records for the decennial period extending from 1901 to 1910.

In the Official Nomenclature of Diseases, 1906, page 31, the following comment regarding *convulsions* appears: “*This term, being the name of a symptom, should only be used when more precise information is wanting. When the cause is known the return should be made under the head of that cause.*”

Of the 15,286 deaths from convulsions during the decade 12,500, or 82 per cent., were of children under one year of age.

A comparison of the principal causes of infantile mortality is made in a table (XXVII.) in which it may be seen that the deaths of infants under one year of age from *convulsions* is 12.21 per 1,000 of all births registered during the 10 years.

Table XX. shows the number of deaths from convulsions, and total number of deaths from all diseases of the nervous system in Ireland, in each of the 10 years 1901-1910.

TABLE XX.—Deaths from “Convulsions,” and Total Number of Deaths from all “Diseases of the Nervous System,” in Ireland, in each of the Ten Years, 1901-1910.

YEAR.	Deaths from Convulsions.			Deaths from all “Diseases of the Nervous System.”			Deaths from “Diseases of the Nervous System,” exclusive of Convulsions.

1910 .. ..	633	503	1,136	1,933	1,752	3,685	1,300	1,249	2,549

*Locomotor Ataxy.*—During the period now under review 425 persons were reported as having died from locomotor ataxy, 352 being males and 73 females.

*Tumour of Brain.*—There were 410 deaths finally classified to tumour of the brain, enquiries regarding the nature of the tumour having failed to elicit any further information. These 410 deaths include 221 of males and 189 of females.

*Diseases of the Heart.*—In the aggregate the number of deaths attributed to one or other of the various headings under diseases of the heart was 84,351, a number equal to a death-rate of 1·91 per 1,000 of the mean population of Ireland. Of the total, 40,798 were deaths of males and 43,553 were deaths of females.

The number of deaths returned under the several headings were as follows:—from valvular heart disease or endocarditis, 18,287 deaths; from pericarditis, 398 deaths; from hypertrophy of heart, 196 deaths; from angina pectoris, 647 deaths; from dilatation of heart, 1,792 deaths; from fatty degeneration of the heart, 2,237 deaths; and from heart disease, undefined, including deaths from heart failure and syncope, 60,794 deaths.

*Diseases of Blood Vessels.*—Altogether there were variously tabulated to diseases of the blood vessels 31,637 deaths (14,644 males and 16,993 females); this number represents an average annual death-rate of 0·72 per 1,000 of the mean population of the country. The total includes 10,180 deaths from cerebral hæmorrhage, cerebral embolism; 17,955 deaths from apoplexy, hemiplegia; 578 deaths from aneurysm; 1,711 deaths from senile gangrene; 304 deaths from embolism, thrombosis (not cerebral); 172 deaths from phlebitis; 97 deaths from varicose veins; and 640 deaths from other diseases of blood vessels.

*Laryngitis and Croup.*—There were 1,241 deaths from laryngitis, 61 from membranous laryngitis (non-diphtheritic), 2,156 from croup, and 67 deaths from other diseases of the larynx and trachea. In the case of certificates of deaths from membranous laryngitis and from croup further inquiry was made with a view to ascertaining whether the disease was of a diphtheritic character, the deaths being then tabulated according to the nature of the replies received.

*Bronchitis.*—During the ten years 1901-1910, the deaths from bronchitis which were registered numbered 77,814, as compared with 86,080 deaths from bronchitis in the decennium 1891-1900. Of the total, 36,232 were of males, and 41,582 of females.

*Pleurisy.*—Deaths from pleurisy numbered 1,830 ; this figure includes 1,123 deaths of males and 707 deaths of females.

*Gastric Ulcer.*—Of 2,887 deaths from gastric ulcer which were registered in the course of the 10 years 1901-1910, 1,204 were deaths of males and 1,683 were deaths of females.

*Appendicitis, Perityphlitis.*—It appears from the abstracts that 1,091 deaths were classified to appendicitis or typhlitis. Of these deaths 614 were of males and 477 were of females.

*Peritonitis.*—The information afforded by the replies to queries sent out during the 10 years 1901-1910 altered the classification of the deaths originally tabulated to *peritonitis*. There were, however, 2,101 deaths classified to *peritonitis* (1,086 males and 1,015 females), regarding the cause of which condition no further information was available.

*Cirrhosis and other diseases of the Liver.*—As already mentioned in the paragraph on alcoholism, page xxxv., there were 3,173 deaths from cirrhosis of the liver ; there were in addition 3,919 deaths from other diseases of the liver and gall bladder.

*Acute and Chronic Nephritis.*—The number of deaths attributed to acute nephritis was 4,184, and the number to chronic nephritis was 10,296, the total being 14,480, and corresponding to an annual rate of 0·33 per 1,000 of the mean population. Of the deaths from acute nephritis, 2,263 were of males and 1,921 were of females, and of the deaths from chronic nephritis, 5,899 were of males and 4,397 were of females.

*Tumours of the Uterus and Ovary.*—There were 435 deaths from *ovarian tumour* and 379 deaths from *uterine tumour*, in which the tumours were either non-malignant, or no further information concerning their nature could be obtained.

#### DISEASES OR ACCIDENTS OF PREGNANCY AND CHILDBIRTH.

The total number of deaths of women associated with pregnancy or childbirth registered in the whole of Ireland in the decade now under notice was 6,526. Of this number 2,125, or 4·6 per 10,000 of married women between the ages of 15 and 55 years were caused by puerperal septic conditions ; 3,608 deaths, or 7·8 per 10,000, were from accidents of pregnancy or childbirth ; and 793 deaths, or 1·7 per 10,000, from conditions associated with or complicating the puerperal condition.

The average deaths from puerperal sepsis were 20·8 per 10,000 of the average births registered in Ireland during the period, and the rate of mortality from other causes connected with the puerperal state 43·0 per 10,000 births, the total average rate being 63·8 per 10,000, as compared with 66 per 10,000 in the preceding decade.

During the decennial period, 1891-1900, 6,954 women, aged 15 and under 55 years, were registered as having died from circumstances connected with pregnancy or childbirth. These deaths are equal to an annual rate of 14·2 per 10,000 of married women living between the ages of 15 and 55 years. Of the 6,954 deaths, 2,763, equal to a rate of 5·6 per 10,000 of married women between the ages of 15 and 55 years, were assigned to puerperal sepsis ; the other deaths from parturition numbered 4,191, or at the rate of 8·6 per 10,000 married women of the above-stated age-periods.

The death-rate for puerperal fever and childbirth combined for the decade 1871-1880 was 15·3 per 10,000 of married women within the ages of 15 and 55 years ; the death-rate for puerperal sepsis was 5·8 per 10,000, and the other deaths at childbirth were at the rate of 9·5 per 10,000 of the married women living between the ages of 15 and 55 years. In the decade 1881-1890, the average annual death-rate from puerperal sepsis and childbirth was 15·0 per 10,000 of married women between the ages of 15 and 55 years, the deaths from puerperal sepsis being at the rate of 6·2 per 10,000, and the other deaths from childbirth at the rate of 8·8 per 10,000 married women living between the ages of 15 and 55 years.

The following statement shows for four decennia the total death-rate from puerperal sepsis and accidents of pregnancy and childbirth, the rate for sepsis, and the rate for deaths from accidents of childbirth per 10,000 married women between the ages of 15 and 55 years.

PERIOD.	Annual Death-rate per 10,000 married women, aged 15 and under 55 years.		
	Puerperal Septic Diseases.	Accidents of Pregnancy or Childbirth.	Total of the foregoing.
1871—80	5·8*	9·5	15·3
1881—90	6·2	8·8	15·0
1891—00	5·8	8·4	14·2
1901—10	4·6	7·8	12·4

The figures in this statement show a reduction from 15·3 deaths per 10,000 in the decade 1871-1880 to 12·4 per 10,000 in the decade 1901-1910.

In the table following the deaths of married women between the ages of 15 and 55 from puerperal conditions are given by certain age-periods for the purpose of comparing the relative liability to death from puerperal sepsis and accidents of childbirth at the various periods of life.

TABLE XXI.—Deaths from Puerperal Septic Diseases, and Accidents of Pregnancy or Childbirth 1901–1910.

	AGE-PERIODS.					Total 15 to 55 years.
	15-20.	20-25.	25-35.	35-45.	45-55.	
Married Women, Census of 1901 .. .. .	1,769	30,249	153,242	155,994	129,027	470,281
„ „ 1911 .. .. .	1,312	24,645	145,325	166,084	118,986	456,352
Mean .. .. .	1,541	27,447	149,283	161,039	124,007	463,317
Deaths from Puerperal Septic Diseases. {	Total Number in Ten Years, 1901-1910 ..					2,125
	Average Annual Rate per 10,000 Married Women of same age .. .. .					4·6
Deaths from Accidents of Pregnancy or Childbirth {	Total Number in Ten Years, 1901-1910 ..					3,608
	Average Annual Rate per 10,000 Married Women of same age .. .. .					7·8
Total Deaths from Puerperal Septic Diseases and Accidents of Pregnancy or Childbirth {	Total Number in Ten years, 1901-1910 ..					5,733
	Average Annual Rate per 10,000 Married Women of same age .. .. .					12·4

It appears from the above table that the highest rate of mortality, 20·8, from puerperal septic conditions, was among the mothers aged 15-20 years, and the lowest, 0·3, among mothers over 45 years of age; moreover the mortality of mothers from accidents of pregnancy, 29·2, was also highest at the age of 15-20 years, and was lowest, 0·8, among mothers who had passed the age of 45 years.

\* Not including Phlegmasia Alba Dolens.

TABLE XXII.—Deaths of Women in Ireland for Ten Years 1901-1910 definitely returned as either caused by or associated with Pregnancy or Childbearing.\*

\* These deaths are included in the general tables of Causes of Death.

The following table shows for each of the years 1901-1910, the number of deaths from each of the three conditions under which deaths of women occur during pregnancy or childbirth, and also the rate per 1,000 births registered during each of these years, with an average rate for the 10 years 1901-1910 :—

YEARS.	Deaths from Puerperal Septic Diseases.		Deaths from Accidents of Pregnancy or Childbirth.		Total Deaths from Puerperal Septic Diseases and Accidents of Pregnancy or Childbirth.		Deaths from causes associated with Pregnancy or Childbirth (not included in foregoing).		Total Deaths caused by or associated with Pregnancy or Childbirth.	
	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.	Number.	Rate per 1,000 Births.
1901 ..	230	2.28	394	3.90	624	6.18	64	0.63	688	6.81
1902 ..	220	2.16	415	4.07	635	6.23	78	0.77	713	7.00
1903 ..	233	2.29	340	3.34	573	5.63	84	0.82	657	6.45
1904 ..	216	2.08	367	3.54	583	5.62	99	0.95	682	6.57
1905 ..	227	2.21	346	3.36	573	5.57	83	0.81	656	6.38
1906 ..	234	2.26	373	3.60	607	5.86	69	0.67	676	6.53
1907 ..	163	1.60	342	3.36	505	4.96	84	0.83	589	5.79
1908 ..	189	1.86	341	3.34	530	5.20	85	0.83	615	6.03
1909 ..	222	2.16	339	3.30	561	5.46	83	0.81	644	6.27
1910 ..	191	1.87	351	3.44	542	5.31	64	0.63	606	5.94
Average, 10 years, 1901-1910.	213	2.08	361	3.53	574	5.61	79	0.77	653	6.38

From the above table it appears that in the year 1902 the high rate of mortality, 7.00 per 1,000 births was reached, and that in the last year of the period the rate had declined to 5.94 per 1,000 births.

## ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH.

The deaths during the ten years 1901-1910 which come under this head amount to 149,868, or 20 per cent of all the deaths registered.

The ill-defined causes to which those deaths were referred were as follow :—*Atrophy, debility, old age, dropsy, anasarca, ascites, tumour, abscess, hæmorrhage, sudden death (cause unascertained), or other ill-defined or not specified causes.*

Of these 149,868 deaths, 94,814 were tabulated under the heading “Old Age,” and 50,313 (including 24,577 deaths of infants under one year of age) were tabulated under the heading “Atrophy, Debility.”

## UNCERTIFIED CAUSES OF DEATH.

Attention is called to the high percentage of deaths that are registered in Ireland as not certified or not medically attended. In the ten years 1901-1910 the number of such deaths was 199,468, or 26·0 per cent. of the deaths registered.

## VIOLENCE.

Of a total of 18,574 deaths attributed to violence, 16,642 were classified to accidental violence, 449 to homicidal violence, 1,468 to suicide, and there were 15 deaths by execution. The total represents an average annual rate of 0·42 per 1,000 of the mean population of Ireland.

The total number of deaths from accidental causes (16,642) included 4,084 deaths from burns, scalds, or explosions (of these 2,120 were deaths of children under 5 years of age), 3,020 deaths from drowning, 2,357 deaths from falls, 1,938 deaths from vehicles and horses, 918 deaths from suffocation, of which 694 were of infants under one year of age, and 379 deaths by poisons or poisonous vapours.

Table XXIII., on page xlv., gives the number of deaths by poisons, whether accidentally, homicidally, or suicidally administered, by age-periods and sexes; the deaths of persons from lead poisoning, drug habit, or food poison are also included in this table.

## INQUESTS.

There were 18,691 inquests returned by the Registrars during the 10 years 1901-1910, or one inquest in every 41 deaths registered.

TABLE XXIII.—Showing the Deaths registered from Poison in Ten Years 1901-1910, distinguishing the Sex and Age of deceased, the Name of the Poison or Poisonous Gas, and whether Accidental, Suicidal, or Homicidal.

of Marriages, Births, and Deaths in Ireland.

**AGES AT DEATH.**

The deaths of infants under one year of age numbered 98,193, equivalent to a rate of 96 per 1,000 births registered.

The number of deaths registered of children under five years of age was 152,677, or at an average annual rate of 34·8 per 1,000 of the living at that age. Of these 152,677 children, 82,119 were boys and 70,558 were girls; the death-rate among boys being 36·9 per 1,000, and girls 32·6.

The average annual number of deaths of persons aged sixty-five years and upwards is equivalent to 7·6 per cent. of the mean number of the living at that age.

Amongst the 767,256 deaths registered during the ten years are 6,199 of persons stated to have been aged ninety-five years and upwards—2,876 males and 3,323 females.

The following statement gives a summary of the death-rates of the population of Ireland at each age period :—

TABLE XXIV.—Average Annual Number of Deaths of Males and of Females in Ireland at each of Twelve Age Periods to every 10,000 Living at the same Ages—Years 1901-1910.

SEX.	AGE PERIODS—Average Annual Mortality per 10,000 Living.												
	ALL AGES.	Under 5 Years.	5-	10-	15-	20-	25-	35-	45-	55-	65-	75-	85 and upwards.
Males .. ..	173·5	368·6	36·9	26·0	44·6	65·7	84·1	95·9	147·7	301·4	524·1	1,118·0	2,825·2
Females .. ..	173·3	326·1	41·7	36·3	55·5	64·2	81·7	98·6	145·5	306·7	501·2	1,068·9	2,645·9
Total .. ..	173·4	347·6	39·3	31·0	50·0	65·0	82·9	97·3	146·6	304·1	512·1	1,092·6	2,730·8

From this it appears that among male children under five years of age the average annual death-rate was 368·6 per 10,000, while the corresponding rate for female children was but 326·1 per 10,000; for each of the next three quinquennial age periods the female death-rate exceeded the male rate thus :—the rate among boys aged five and under ten was 36·9 per 10,000, and that for the girls 41·7 per 10,000; among boys aged ten years and under fifteen the rate was 26·0, and among girls it was 36·3, and the deaths of males aged fifteen and under twenty were equal to 44·6 per 10,000, while those of females of that age equalled 55·5 per 10,000. In the next two age-periods the male death-rate was in excess of the female; the rates for the period twenty and under twenty-five being 65·7 (males) and 64·2 (females); and for the period twenty-five and under thirty-five, 84·1 and 81·7.

In the following three age-periods the death-rate is greater among females in the first and third periods, and among males in the second period. For the period thirty-five and under forty-five the rate for females was 98·6, and for males 95·9; for the period forty-five and under fifty-five, 147·7 (males) and 145·5 (females); and for the period fifty-five and under sixty-five 306·7 (females) and 301·4 (males). The death-rate is greater among males than females in each of the last three age-periods, namely, 524·1, 1,118·0, and 2,825·2 for males and 501·2, 1,068·9, and 2,645·9 for females respectively.

The following is a supplement to the foregoing summary of deaths by ages, showing the percentage of the total deaths which occurred during each age period :—

TABLE XXV.—Proportion per cent. of the Deaths at All Ages in the Ten Years 1901-1910, which occurred at each of Twelve Age Periods.

SEX.	AGE-PERIODS.—Proportion per cent. of the Deaths at all Ages which occurred at EACH PERIOD.												
	ALL AGES.	Under 5 Years.	5-	10-	15-	20-	25-	35-	45-	55-	65	75-	85 and upwards.
Males .. ..	100·0	21·6	2·2	1·5	2·6	3·5	7·0	6·4	7·6	12·1	16·5	13·4	5·6
Females .. ..	100·0	18·3	2·4	2·0	3·2	3·4	7·0	6·5	7·8	13·0	17·2	13·5	5·7
Total .. ..	100·0	19·9	2·3	1·8	2·9	3·5	7·0	6·5	7·7	12·6	16·8	13·4	5·6

From this it appears that 21·6 per cent. of the deaths of males and 18·3 per cent. of those of females occurred amongst children under five years of age. The deaths of males aged five and under twenty-five years formed 9·8 per cent. of the total number of deaths of males, and those of females of that age 11·0 per cent. of the total female mortality; 13·4 per cent. of the deaths of males and 13·5 per cent. of those of females occurred among

persons aged twenty-five and under forty-five; 19·7 per cent. of the male mortality was amongst men aged forty-five and under sixty-five, and 20·8 per cent. of the female mortality amongst women of those ages; and 35·5 per cent. of the deaths of males and 36·4 per cent. of those of females occurred among persons aged sixty-five years and upwards.

INFANT MORTALITY.

In the decennial period now the subject of review the deaths of infants (under one year of age) in Ireland numbered 98,193, or an annual average of 95·95 deaths for every 1,000 births registered. Of the total deaths, 54,783 were of male infants, and 43,410 were of female infants.

The following statement shows the proportion of deaths of infants by sexes for the total civic unions and the remainder of Ireland for the decennial period under notice.

TABLE XXVI. (a)—Showing for Ireland, for Unions containing towns which, in 1901, had a population of 10,000 inhabitants or upwards ("Civic Unions"), and for the remainder of the country, the proportion of deaths of infants under one year of age per 1,000 births registered in the ten years, 1901-10.

AREAS.	Deaths under one year per 1,000 Births.		
	Males	Females.	Total.
Total "Civic Unions" ..	136·4	115·6	126·3
Remainder of Ireland ..	82·1	67·3	74·9
Total of Ireland .. ..	104·3	87·1	96·0

From this it appears that the mortality among both sexes was 126·3 in the civic unions, and was 74·9 in the rural unions; that among male infants it was 136·4 in the civic unions and 82·1 in the rural unions; and that among female infants the mortality was 115·6 in the civic unions and 67·3 in the rural unions.

A comparison is instituted between England and Wales, Scotland and Ireland, and the principal cities therein, with respect to infant mortality for each of the 10 years 1901-1910.

TABLE XXVI. (b)—Showing the Number of Deaths of Infants under One Year of age to every 1,000 Births in England and Wales, Scotland, Ireland, in the Dublin Registration Area, in the County Borough of Belfast, and in London, Liverpool, Edinburgh and Glasgow, during each of the years 1901-1910.

AREAS.	Deaths of Infants under one Year of Age to every 1,000 Births.									
	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
England and Wales ..	151	133	132	145	128	132	118	120	109	105
Scotland .. ..	129	113	118	123	116	115	110	121	108	108
Ireland .. ..	101	100	96	100	95	93	92	97	92	95
Dublin Registration Area.	168	162	151	169	143	146	156	146	141	142
Belfast County Borough	154	151	134	154	136	144	136	147	139	143
London .. ..	148	140	130	145	130	131	116	113	108	103
Liverpool .. ..	188	163	159	196	153	172	144	141	144	140
Edinburgh .. ..	148	122	121	130	133	118	127	122	119	111
Glasgow .. ..	150	130	144	146	131	131	130	137	133	121

The statistics given in the foregoing tabular statement show that in England and Wales infant mortality has declined from 151 to 105, in Scotland from 129 to 108, and in Ireland from 101 to 95, the rate of 92 having been reached in Ireland in each of the years 1907 and 1909. The rate in Dublin Registration Area, which was 168 in 1901, declined to 142 in 1910, and in Belfast, 154 in 1901 to 143 in 1910; in London the rate in 1901 was 148, and in 1910 it was 103; in Liverpool the rate reached 188 in 1901, and in 1910 it was 140; in Edinburgh and Glasgow the rates in 1901 were respectively 148 and 150, and in 1910 they were 111 and 121.

A reference to the abstracts will enable the reader to examine the causes of infant mortality in detail according to the classification of diseases as issued by the Nomenclature Committee of the Royal College of Physicians, London. In the following table these causes are summarised for the decennial period now under notice.

TABLE XXVII.—Showing for Ireland the Mortality by certain causes among Infants under 12 months old, per 1,000 Births registered in the Ten Years 1901-1910, distinguishing between those under 3 months old, 3 months and under 6, and 6 months and under 12.

Other Causes .. .. .		3.82	1.51	2.33	7.66

The figures in Table XXVII. show that for every 1,000 births registered during the decennium 55.26 infants under 3 months succumbed, 16.98 between the ages of 3 months and 6 months, and 23.71 between the ages of 6 months and 12 months. Altogether the proportion of deaths of infants under one year to 1,000 births was 95.95. Of the total deaths, the proportion caused by wasting diseases of infancy was the highest, namely, 33.74 per 1,000 births; the proportion for *convulsions* was 12.21; for bronchitis, 10.95; for the diarrhoeal group of diseases, 10.92; for pneumonia, 4.97; for whooping-cough, 4.56; for tuberculous, 4.03; for measles, 1.45, and for meningitis (not tuberculous), 1.37 per 1,000 of the births registered in Ireland during the decade.

### OCCUPATIONAL MORTALITY.

In Table XXVIII., compiled from the weekly returns furnished by the registrars, the mortality during the ten years 1901-1910 among the several social grades of the population of the Dublin Registration Area is shown.

From an examination of Column (2) it will be seen that among the families of the Professional and Independent class the average annual death-rate from all causes was 21.2 per 1,000 of the mean population; among the Middle class it was 14.9; among the Artisan class and Petty Shopkeepers the rate was 18.2; and among the General Service class, it was 22.6 per 1,000.

TABLE XXVIII.—Showing in Five General Classes and Eighteen Groups the Occupations or Social Position of the Persons whose Deaths were registered in the Dublin Registration Area during the Ten Years 1901-1910, the Annual Death Rate represented by the Deaths from all causes and from Phthisis; the Number of Deaths at each of Six Periods of Life, and the Number from some of the Principal Causes of Death.

\* Formerly described as "Simple Continued Fever."

From this table it appears that in the first class the general death-rate was highest for the professional group, namely, 26·2 per 1,000, and lowest for the higher class merchants and manufacturers group, namely, 9·7 per 1,000. In the second class, the highest rate, for traders, business managers, etc., was 16·1 per 1,000, and the lowest, 13·0 per 1,000, was for the group consisting of the general body of officials, civil service, banking, etc. In the third class, the group of other trades and callings ranking with trades contributed the highest rate, 21·7 per 1,000, and the clothing trade was lowest with a rate of 13·5 per 1,000. In the general service class the rates varied from 8·7 per 1,000 among the domestic servants to 27·8 per 1,000 among hawkers, porters, and labourers.

### EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police who acted as enumerators at the several Irish seaports, the number of emigrants who left Ireland during the ten years 1901-1910 amounted to 346,024; of these 172,297 were males and 173,727 were females. In the previous decade 433,526 persons emigrated. Of the whole number in the late decade, 42,490 were from Leinster; 112,350 from Munster; 105,980 from Ulster; 85,133 from Connaught; and in the case of 71 persons who left Ireland in the year 1903 the counties from which they were emigrating were not specified.

Of the total emigrants from Ireland in the ten years, 8·9 per cent. were under fifteen years of age at the time of their departure; 83·3 per cent. were between fifteen and thirty-five years old; and 7·8 per cent. were thirty-five or upwards.

### PRICES OF PROVISIONS, AND PAUPERISM.

The subjoined Table shows for each of the ten years 1901-1910 the average prices of provisions in Dublin, and the average number of persons in Ireland receiving indoor or out-door relief on Saturdays.

The mean price of bread (first quality delivered) in Dublin was 5½*d.* per 4 lb. loaf, the average yearly prices ranging from 5¼*d.* in 1901 to 6¼*d.* in 1909. The mean price of oatmeal (1st quality) for the ten years was 14*s.* 5*d.*, the yearly average prices ranging from 13*s.* 4*d.* in 1901 to 15*s.* 0*d.* in 1908; the mean prices of potatoes were from 3*s.* 1*d.* to 3*s.* 8*d.*, the lowest average prices for any year being from 2*s.* 7*d.* to 3*s.* 2*d.* in 1905, and the highest 4*s.* 0*d.* to 4*s.* 6*d.* in 1907; beef was lowest in 1905, the average prices being from 48*s.* 6*d.* to 54*s.* 6*d.*, and highest in 1902 and 1910, the average prices being from 55*s.* 6*d.* to 59*s.* 6*d.*, and from 54*s.* 6*d.* to 61*s.* 0*d.* respectively; the mean prices for the ten years were from 52*s.* 2*d.* to 57*s.* 6*d.*

The mean number of workhouse inmates in Ireland on Saturdays during the ten years (derived from returns furnished by the Local Government Board) was 43,480, and the mean number of persons receiving out-door relief was 56,762. The lowest average number of workhouse inmates for any one year was 41,623 in 1910, and the highest 44,920 in 1908, and the average numbers on out-door relief ranged from 54,659 in 1910 to 57,921 in 1902.

TABLE XXIX.—Average Prices in Dublin of Bread, Oatmeal, Potatoes, and Beef during the years 1901-1910, and the Average Number of Persons in Ireland receiving In-door and Out-door Relief on Saturdays in those years.

\* Prices derived from Returns received from "Bolands, Limited," and "Johnston, Mooney, and O'Brien, Limited."

† Compiled from Returns furnished by the Local Government Board.

‡ Not including those relieved by means of works devised for the relief of distress, viz.—13,884 in 1905 and 10,906 in 1908.

**THE WEATHER.**

Information regarding the weather is given on pages 61-73. The tables on pages 64-71 have been compiled from Meteorological Observations taken in the City of Dublin by Sir John W. Moore, M.A., M.D., D.P.H., D.SC., F.R.C.P.I., F.R.MET. SOC., D.L.; and published in the "Dublin Journal of Medical Science" during the years 1901-1910.

I am indebted to Dr. Ninian M. Falkiner Superintendent of Statistics, for the care he has bestowed on the compilation of the several Tables attached to this Report.

I have the honour to be,

Your Excellency's faithful Servant,

WILLIAM J. THOMPSON,

*Registrar-General.*

GENERAL REGISTER OFFICE,

CHARLEMONT HOUSE,

DUBLIN, *25th September, 1913.*

**DECENNIAL ABSTRACTS**

MARRIAGES, BIRTHS, AND DEATHS, registered in the Ten Years, 1901-1910.

I.—PROVINCE OF LEINSTER—MARRIAGES, BIRTHS, AND DEATHS, 1901-1910.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were in fact, less than the Deaths to the extent stated.

NOTE.—This Table has been constructed for the years 1826 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821. 1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841. 1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England. 1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned, to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year. 1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over census numbers for 1861 and 1871 as explained for the last period. 1872-1910—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, 1892-1901, and 1902-1910, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1910 respectively, and the estimates based on the Censuses taken in 1831, 1891, 1901, and 1911.

AGES OF THE POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, 1901, and 1911.

## THE WEATHER.

The following particulars have been derived from Returns of Meteorological Observations taken during the years 1901-1910, inclusive, at 40 Fitzwilliam Square, West, Dublin, by Sir John W. Moore, M.A., M.D., D.Ph., Dubl., D.Sc., Oxon., F.R.C.P.I., F.R. Met. Soc., D.L.; Observer at Dublin for the Meteorological Office, London.

The Average† Mean Atmospheric pressure has been obtained from daily readings of the barometer at 9 A.M., and 9 P.M., corrected and reduced to 32° Fahrenheit, but not reduced to the mean sea level.

Hours of observation.—The hours of observation are 9 a.m., and 9 p.m. The afternoon observations are used in preparing the wind summaries and in computing the number of days of "overcast" or "clear sky."

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog, and Gale, are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the average of the estimates of the "amount of cloud" at the hours of observation is less than 2, and as an "overcast" day if the average is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours. Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

See also the notes (pages 81 to 90).

The *Average Mean Height of the Barometer* during the ten years 1901-1910, was 29.860 inches. The annual mean varied from 29.785 inches in 1903 to 29.912 in 1908, a difference of about an eighth of an inch (.127 inch.)

The monthly average ranged from 29.723 inches in December to 29.971 inches in September. The extreme monthly means were—highest, 30.243 inches in January, 1907; lowest, 29.411 in February, 1910.

The *Average Mean Temperature* deduced from the daily readings of the Thermometer was 50.1°, the average mean of maximum (A) being 55.7°, and the average mean of minimum (B) being 44.4°. The annual mean of A and B varied from 49.3 in 1909 to 50.7 in 1908—a range of 1.4°. The monthly average of A and B varied from 42.0° in February to 60.7° in July—an annual range of 18.7°. The extreme monthly means, A and B, were—highest, 63.8° in July, 1905; lowest, 38.1° in February, 1901—a range of 25.7°. The absolute extremes of temperature were—highest, 81.8° on July, 17, 1901, and July 14, 1905; lowest, 20° on December 21, 1909. These values give a range of about 61.8° in the screen.

*Rain.*—The total fall measured 270.44 inches and was distributed over 2,023 days, including snow or sleet on 182 days, and hail on 263 days. The average annual number of rainy days was therefore 202.3, of snowy days 18.2, and of days of hail 26.2. The smallest annual fall was 22.18 on 189 days in 1904; the largest fall was 35.44 inches on 219 days in 1910. The average annual fall appears as 27.044 inches. The ten years' monthly fall varied from 17.90 inches on 152 days in February to 30.70 inches on 183 days in August.

The maximal rainfall in twenty-four hours was 3.44 inches on August 25, 1905, a downpour which is memorable. Two other remarkable downpours occurred within the ten years:—on September 2, 1902, and November 11, 1901, when 2.075 inches and 2.037 inches respectively were measured. February and March were the only months in which no rainfall of one inch in twenty-four hours took place; the heaviest downpour in these months was .918 inch on February 26, 1902, and .81 inch on March 12, 1903. The distribution of rain was as follows:—for the first quarter, 62.75 inches; for the second, 64.41; total for the first half-year, 127.16 inches. In the third quarter 72.44 inches, and in the fourth quarter 70.84 inches fell. Total for the second half-year, 143.28 inches. The numbers representing rainy days for the first, second, third, and fourth quarters are 503, 496, 491, and 533 respectively.

Of the 182 snowy days, 122 were in the first quarter, 16 in the second, none in the third, and 44 in the fourth. Of the 262 days on which hail was observed, 121 fell in the first quarter, 77 in the second, 10 in the third, and 54 in the fourth.

As regards the *Direction of the wind*, 7,304 observations were made, with this result:—N., 418; N.E. 613; E., 670; S.E. 603; S., 597; S.W., 1,186; W., 1,896; N.W., 1,030; calm, 291. The preponderance of Westerly (S.W. to N.W.) over easterly (N.E. to S.E.) winds is very striking—the figures are 4,112 and 1,886, respectively, more than 2 to 1 in favour of westerly winds. But the great excess of W. winds is still more remarkable. They number 1,896, or more than half as much again as the number of S.W. winds, 1,186.

*Gales.*—Wind-force 8 and above, were recorded on 300 occasions, of which 139 or considerably more than one-third, happened within the first quarter, only 34 in the second, 42 in the third, and 85 in the fourth. January, with 51 gales, was the stormiest month. There were only seven gales in July.

*Thunderstorms* occurred on 72 days, of which 7 were in the first quarter, 29 in the second, 32 in the third, and 4 in the fourth. July (with 19 storms), June (with 17 storms), and August (with 12) were the months in which electrical disturbances most frequently took place. Only one thunderstorm happened in each of September, November and December, and not even one in January. On 385 occasions the sky was clear, or the amount of cloud was under 20 per cent.; on 1,015 occasions it was overcast, that is, the amount of cloud exceeded 80 per cent. The fourth quarter was the cloudiest (293 overcast skies), of clear skies 99 were observed in the first quarter, 98 in the second, 87 in the third, and 101 in the fourth.

The mean of observations of *Amount of Cloud* at 9 A.M., and at 9 P.M., was 60 per cent.

†Throughout this Abstract the term "Average" is employed to denote the *arithmetical mean of a series of means*; thus, by Average Atmospheric Pressure we understand the arithmetical mean of a series of ten years annual mean pressures.

The following are more detailed remarks upon the weather in the different months :—

**JANUARY.**—The average height of the barometer was 29·938 inches. It varied from 30·243 inches in 1907 to 29·710 inches in 1910—a range of not less than ·533. The average mean temperature deduced from the maximal and minimal readings was 42·9°. In 1906 the average was 43·9°, in 1910 it was 40·9°. The absolute extreme temperatures were—highest, 56°, on the 16th, in 1908, and the 2nd in 1910; lowest, 23° on the 5th, in 1908. The average rainfall was 2·286 inches on 16·0 days; the extremes of rainfall were—maximum, 4·13 inches on 22 days, in 1906; minimum, 0·43 inch, on 9 days in 1907. The absolute maximal fall in 24 hours was 1·31 inches, on the 27th, in 1910. Snow or sleet fell on 40 and hail on 34 days during the ten years. There were no thunderstorms. There were 51 gales. The most prevalent wind was W., which was recorded 213 times out of a total of 620 observations. Next came S.W., with 150 observations. The N.E. and N. winds were the least frequent, with 11 and 10 observations respectively. The average amount of cloud was 60 per cent.

**FEBRUARY.**—The average atmospheric pressure was 29·841 inches, the mean value varying from 30·101 inches in 1905 to 29·411 inches in 1910. The average of the maximal and minimal temperatures was 42·0°. It ranged from 47·5° in 1903 to 39·2° in both 1901 and 1902. The absolute extremes of temperature were—highest, 59·0°, on the 8th, in 1903; lowest, 22° on the 12th, in 1902. The average rainfall was 1·79 inches on 15·2 days; the extremes of rainfall were—maximum, 3·76 inches, on 24 days, in 1910; minimum, 0·59 inch, on 8 days, in 1909. The absolute greatest fall in twenty-four hours was 0·918 inch, on the 26th, in 1902. Snow or sleet fell on 38 and hail on 32 days within the ten years. There were 45 gales. The wind blew most frequently from W.—on 190 occasions—least from N. and N.E.; from which points it blew on 25 and 26 occasions respectively. The average amount of cloud was 63 per cent.

**MARCH.**—Average height of the barometer—29·776 inches, the mean ranging from 30·048 inches in 1907 to 29·456 inches in 1909. Average of maximal and minimal temperatures = 44·1°, varying from 46·7° in 1902 to 40·8° in 1909. The absolute extremes of temperature were—highest 64° on the 27th, in 1907; lowest, 26°, on the 26th, in 1901, and the 4th in 1909. The average rainfall was 2·199 inches on 19·1 days; the extremes of rainfall were—largest, 3·62 inches on 26 days in 1903; smallest 0·92 inch on 11 days in 1910. In 1903 there were 26 rainy days. The absolute maximal fall in twenty-four hours was 0·81 inch, on the 12th, in 1903. Snow or sleet fell on 44 days and hail on 55 days during the ten years. There were 2 thunderstorms and 43 gales. The most prevalent wind was once more W., observed on 160 occasions. The least prevalent wind was E. (37 observations). The average amount of cloud was 58 per cent.

**APRIL.**—Average height of the barometer—29·830 inches. The mean ranged from 30·045 inches in 1906, to 29·708 inches in 1907. Average of means of maximal and minimal readings—47·0°, varying from 49·1° in 1904, to 44·7° in 1908. The absolute extremes of temperature were—68° on the 10th, in 1909, and 25° on the 24th, in 1908. The average rainfall was 2·064 inches on 18·6 days; the extremes being—greatest, 4·08 inches, on 22 days, in 1909; least, 0·864 inch, on 12 days, in 1901. The absolute maximal fall in twenty-four hours was 1·58 inch on the 3rd, in 1909. Snow or sleet fell on 16 days, hail on 43 days in the ten years. There were 4 thunderstorms and 16 gales. The W. wind was the most prevalent, being observed on 125 occasions. The least prevalent winds were S. (44 observations), and S.E. (51 observations). The average amount of cloud was 58 per cent.

**MAY.**—The average pressure was 29·896 inches, the mean ranging from 30·081 inches in 1905 to 29·754 inches in 1902. Average of means of maximal and minimal readings—52·6°, ranging from 55·2°, in 1908 to 49·9° in 1902. The absolute extremes of temperature were—highest, 73° on the 21st in 1909; lowest 33° on the 2nd in 1909. The average rainfall was 2·132 inches on 16·7 days. The greatest rainfall being measured in 1907 (3·21 inches, on 17 days), and the least in 1905 (1·18 inches, on 10 days). The absolute maximal fall in twenty-four hours was 1·12 inches, on the 6th, in 1907. There was no snow nor sleet, but hail fell on 27 days in the ten years. There were 8 thunderstorms and 9 gales. W. winds were most frequent, being 99 in number, but were nearly equalled by N.E. and E. winds, which numbered 98 and 94 respectively. S. winds occurred on 37 occasions; while N., and N.W. together made up 139 out of 620 observations. The average amount of cloud was 57 per cent.

**JUNE.**—Average pressure—29·928 inches, the mean varying from 30·072 inches in 1906, to 29·704 inches in 1907. Average of the means of the maximal and minimal temperatures—57·2°, the range being from 59·6° in 1905 and 1906, to 55·2° in 1909. The absolute extreme temperatures were—maximum, 77·0° on the 26th, in 1905; minimum, 41·0°, on the 14th, in 1903. The average rainfall was 2·245 inches, on 14·3 days. In 1910 no less than 6·21 inches of rain fell on 19 days; and the least monthly fall was 1·05 inches on 12 days in 1906. In 1907 there were 27 rainy days. The absolute maximal fall in twenty-four hours was 1·26 inches on the 5th, in 1910. There was no snow or sleet, but hail was noted on 7 days. There were nine gales. Thunderstorms occurred on 17 occasions. The wind blew from N.E. on 111 occasions; and from N.W. on 94, and W. on 89. The average amount of cloud was 61 per cent.

**JULY.**—Average height of barometer—29·917 inches. Mean ranging from 29·979 inches in 1905 to 29·807 inches in 1910. Average of the means of maximal and minimal readings—60·7°, varying from 63·8° in 1905 to 58·5° in 1910. The absolute extreme temperatures were—highest, 81·8° on the 17th in 1901; and the 14th in 1905; lowest, 44° on the 11th in 1907. The average rainfall was 2·201 inches on 16·8 days. The heaviest rainfall was 4·02 inches on 23 days in 1903; the slightest was 0·82 inch on 17 days in 1905. The maximal fall in twenty-four hours was 1·342 inches on the 25th in 1902. Neither snow nor sleet occurred. Hail fell on 3 days. There were 19 thunderstorms and 7 gales. The most prevalent wind was W., observed 165 out of 620 times. The least frequent wind was S. (20 observations). Average amount of cloud—63 per cent.

AUGUST.—Average atmospheric pressure=29·855 inches, the mean ranging from 29·956 inches in 1901 to 29·717 inches in 1903. Average of the means of maximal and minimal readings, 59·6°—in 1906, 63·2°; in 1902, 58·3°. The extremes of temperature were—maximum, 77·7 on the 3rd in 1904; minimum, 44° on the 30th in 1907. The average rainfall was 3·070 inches on 18·3 days. The maximal rainfall was 7·02 inches on 22 days in 1905; the minimal fall was 1·30 inches on 13 days in 1909. The fall of 7·02 inches exceeded that of any other month in the ten years. Rain was measured on 26 days in 1903. The heaviest rainfall within twenty-four hours was 3·44 inches on the 25th in 1905. There was no snow or sleet. Hail fell on only 5 days. There were 12 thunderstorms and 19 gales. The most frequent wind was W. (191 observations); the least so was N. (28 observations). The average percentage of cloud was 61.

SEPTEMBER.—The average height of the barometer was 29·971 inches, the mean ranging from 30·208 inches in 1910 to 29·762 inches in 1901. The average of the means of maximal and minimal readings was 56·2°. In 1907 it was 57·8°; in 1909 it fell to 53·8°. The absolute extreme temperatures were—highest, 77·8° on the 2nd in 1906; lowest, 37·8° on the 15th in 1903. The average rainfall was 1·973 inches on 14·0 days. In 1901 the fall amounted to 3·686 inches on 18 days, but in 1907 it was only 0·55 inches on 7 days. The maximal fall in twenty-four hours was 2·075 inches on the 2nd in 1902. There was neither snow nor sleet, and hail fell on only 2 days. There was 1 thunderstorm and 16 gales. The W. wind as usual chiefly prevailed, being noted on 106 occasions. The least frequent wind was N. (38 observations). The average cloudiness was 58 per cent.

OCTOBER.—The average barometrical height was 29·797 inches; the annual mean pressure varying from 30·018 inches in 1904 to 29·447 inches in 1903. The average of the means of the maximal and minimal temperatures was 51·0°; in 1908 it was 54·4°; in 1905 it fell to 47·2°. The absolute extremes of temperature were—highest, 69° on the 2nd, in 1908; lowest, 29·0° on the 21st, in 1905. The average rainfall was 2·42 inches on 19·9 days. In 1907 the rainfall amounted to 5·12 inches on 29 days; in 1904, 0·45 inches fell on 11 days. The maximal fall in twenty-four hours was 1·08 inches on the 2nd, in 1910. There was neither snow nor sleet. Hail occurred on 7 days. There were 2 thunderstorms and 19 gales. The wind blew most frequently from W. (on 152 occasions); least so from N. (on only 19 occasions). The average amount of cloud was 60 per cent.

NOVEMBER.—Average height of barometer=29·853 inches, the mean ranging from 30·104 in 1901 to 29·584 inches in 1910. The average of the means of the maximal and minimal readings was 45·0°. It rose to 48·1° in 1908, and fell to 40·8° in 1910. The absolute extremes of temperature were—highest, 64·4° on the 24th in 1906; lowest 23·6° on the 19th in 1905. The average rainfall was 2·306 inches on 14·7 days. The fall ranged from 3·62 inches on 11 days in 1901 to 1·08 inches on 9 days in 1904. The maximal fall in twenty-four hours was 2·037 inches on the 11th, in 1901. Snow or sleet fell on 16 days in the 10 years, and hail on 19 days. There were 24 gales and 1 thunderstorm. The W. wind was most prevalent (216 observations out of 600); the N. wind was least prevalent (17 observations). The average cloudiness was 59 per cent.

DECEMBER.—The average height of the barometer was 29·723 inches, the mean varying from 30·037 inches in 1905 to 29·536 inches in 1910. The average of the means of the maximal and minimal readings was 43·1°; in 1905 it was 47·1°; in 1901 it fell to 40·4°. The absolute extremes of temperature were—maximum 59·0° on the 4th, in 1904; minimum, 20° on the 21st in 1909. The average rainfall was 2·358 inches on 18·7 days. It varied from 5·57 inches on 25 days in 1910, to 1·26 inch on only 13 days in 1905. The absolute heaviest fall in twenty-four hours was 1·03 inch on the 5th in 1909. Snow or sleet fell on 28 days; hail also fell on 28. One thunderstorm occurred. There were 42 gales. A vast preponderance of W. and S.W. winds was noted—190 observations of W. and 131 of S.W., together giving 321 out of a total of 620 observations, that is considerably more than one-half. In marked contrast, the N. wind was observed on only 11 occasions; the N.E. on 20. The average quantity of cloud was 65 per cent.

ABSTRACT OF METEOROLOGICAL OBSERVATIONS taken at 40 Fitzwilliam-square, West, Dublin, during the Ten

Long. 6° 15' W. ; Lat. 53° 20' N. ; Height above Sea Level, 47 feet ; Heights above ground :—  
and 1 foot 4 inches

\*The Hours of Observation are 9 a.m. and 9 p.m.  
 †The Averages used are based on observations as follows:—Rainfall 35 years, 1866-1900; Temperature 30 years, 1871-1900; Sunshine 20 years, observations of Calms, and the number of days of Gale are given in the table.  
 ‡The Sunshine Values are obtained at the Mountjoy Observatory in the Phoenix Park, and the Earth Temperatures at Trinity College.  
 NOTE.—The Mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not slight limits with the pressure and the temperature) is: +.058.

Years 1901-1910, by SIR JOHN W. MOORE, M.A., M.D., D.Ph., DUBL.; D.Sc., OXON; F.R.C.P.I.; F.R. MET. Soc.; D.L.

Barometer, 6 feet; Thermometers, 3 feet; Rain Gauge, 3 feet 4 inches for the years 1901-1903, for the years 1904-1910.

\*The Hours of Observation are 9 a.m. and 9 p.m.  
 †The Averages used are based on observations as follows:—Temperature 35 years, 1871-1905; Rainfall 35 years, 1871-1905; Sunshine 25 years, observations of Calm and the number of days of Gale are given in the table.  
 ‡The Sunshine Values are obtained from the Mountjoy Observatory in the Phoenix Park, and the Earth Temperatures from Trinity College.  
 NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit but not slight limits with the pressure and the temperature) is: + .058.

Years 1901-1910, by SIR JOHN W. MOORE, M.A., M.D., D.Ph., DUBL.; D.Sc., OXON; F.R.C.P.I.; F.R. MET. Soc.; D.L.

Barometer, 6 feet; Thermometers, 3 feet; Rain Gauge, 3 feet 4 inches for the years 1901-1903, for the years 1904-1910.
