

PARLIAMENT OF NORTHERN IRELAND

**THE REGISTRAR-GENERAL'S
ANNUAL REPORT FOR 1956**

containing general Abstracts of Births, Deaths
and Marriages registered in Northern Ireland
during the Year together with
Returns of Notifications of Infectious Diseases
and Meteorological Summary

Presented to Parliament pursuant to Statute

*Ordered by The House of Commons to be Printed
8th October, 1957*

BELFAST

HER MAJESTY'S STATIONERY OFFICE

SIX SHILLINGS NET

H.C. 1266

GENERAL REGISTER OFFICE,
FERMANAGH HOUSE,
ORMEAU AVENUE,
BELFAST.

1st August, 1957

TO CAPTAIN THE RIGHT HONOURABLE TERENCE O'NEILL, D.L., M.P.
Minister of Finance for Northern Ireland.

SIR,

I have the honour to submit the Thirty-Fifth Annual Report on the Births, Deaths, and Marriages registered in Northern Ireland, together with Abstracts of the particulars of such registrations. The Report relates to the year ended 31st December, 1956. The Abstracts have been prepared for presentation to Parliament, pursuant to the provisions of statutes governing the registration system. The Report draws attention to the salient features of the vital statistics contained in the Abstracts, and information is given relating to notifications of infectious diseases, migration and the weather.

I wish to acknowledge the material assistance of the Central Punched-Card Service of the Ministry of Finance in the compilation of the statistics by machine tabulation, also the assistance rendered by the Medical Staff of the Ministry of Health and Local Government, for advice on medical matters, and to record my appreciation of the courtesy shown by the Registrars-General of England and Wales, Scotland and the Irish Republic, in furnishing information relating to the areas under their respective administrations.

I have the honour to be, Sir,

Your obedient Servant,

L. C. Mulligan,

Registrar-General of Births, Deaths, and
Marriages for Northern Ireland.

Thirty-Fifth Annual Report of the Registrar-General for Northern Ireland

SUMMARY

The total number of births registered in Northern Ireland during the year 1956 was 29,489. This number compares with 28,965 in 1955, 28,803 in 1954 and an average of 28,798 for the five years 1951-55. The birth rate in 1956 was 21.1 per 1,000 population, which is 0.3 above that for 1955 and is the highest birth rate since 1949 when a rate of 21.4 was recorded.

Illegitimate births numbered 790, which is 100 above the figure for 1955, but it is 48 below the average number for the five years 1951-55.

In 1956, there were 9,359 marriages compared with 9,513 in 1955. The marriage rate of 6.7 is 0.1 below that for 1955 and the average rate for the five preceding years.

Deaths in 1956 numbered 14,858: this is 549 below the number registered in 1955. The death rate which is the lowest ever recorded in Northern Ireland was 10.6 per 1,000 population and is 0.5 below that for 1955 and 0.7 below the average rate for the five years 1951 to 1955. The number of deaths of persons aged 65 years and upwards was 9,834 or 66.2 per cent. of the total deaths, which gives a percentage increase of 0.3 per cent. over that for 1955. Deaths of children under 5 years of age decreased from 1,066 in 1955 to 942 in 1956. There were 1,082 deaths in this group in 1954.

Heart diseases, cancer, cerebral haemorrhage, apoplexy, etc. were the most frequent causes of death, especially among old people. The number of deaths from bronchitis increased slightly, whilst those from pneumonia decreased substantially.

Deaths from tuberculous diseases continued to decline and the death rate of 0.12 per 1,000 population is the lowest on record. This rate compares with a rate of 0.15 in 1955 and is only a quarter of what it was as recently as 1950.

The number of deaths from cancer rose by 31 from 2,170 to 2,201; male deaths increased by 51 while female deaths decreased by 20. The increase in the male deaths is accounted for by the rise in the number of deaths from lung cancer, and to a lesser extent the increase in the number of deaths from cancer of the stomach. Lung cancer deaths among males increased from 232 in 1955 to 260 in 1956. Comparison of the 1956 figure with that for 1946 shows that there was an increase of 210 per cent. in male mortality from lung cancer during that period.

The infant mortality rate of 29 deaths per 1,000 live births is the lowest ever recorded. In 1955, the rate was 32 and the average rate for the five

year period 1951–1955 was 37. The number of deaths from maternal causes decreased from 24 to 17. The rate was 0.58 per 1,000 births, which is the lowest on record, and is 0.25 below the rate for 1955.

As in 1952 and 1954, no deaths were recorded from diphtheria. During the past five years only 2 deaths were ascribed to this cause, one in each of the years 1953 and 1955.

The estimated population at 30th June was 1,396,600 an increase of 2,800 from 1955. During the year ended 30th June, 1956, there was an excess of births over deaths of 14,716 but this was reduced by a balance of outward over inward migration estimated at 11,900.

POPULATION

The home population of Northern Ireland as estimated at 30th June, 1956 was 1,396,600 persons. This estimate, comprising civilians and members of the armed forces stationed in Northern Ireland and based on the census population ascertained on 8th April, 1951, has been used to calculate the rates (relating to 1956) for the country as a whole. The rates for the various divisions of the country have also been based on the estimated home population as at 30th June, 1956.

Table A gives the population figures, as estimated at 30th June, 1956, for Counties and County Boroughs, together with the aggregates of the urban and rural areas. The populations as ascertained at the censuses of 1911, 1926, 1937 and 1951 are also shown. The 1951 census populations for each Local Administrative Area are given in Abstract XI.

Table A1 shows the age and sex distribution of the population as at 30th June, 1956, also the percentage of the total population in each age-group. Abstract XVIII gives the 1951 Census population by age and sex for Northern Ireland also for the Counties and County Boroughs.

TABLE A.—Populations of Counties, County Boroughs and Urban and Rural Areas as recorded at the censuses of 1911, 1926, 1937 and 1951, and as estimated at mid-year 1956.

AREA	Census 1911	Census 1926	Census 1937	Census 1951	Mid-Year Estimate 1956
Northern Ireland	1,250,531	1,256,561	1,279,745	1,370,921	1,396,600

85 and over	6,200	0.4	2,500	0.4	3,700	0.5

MARRIAGES

Number and Rate. Marriages registered during the year numbered 9,359 which is 154 less than the previous year. The rate 6.70 per 1,000 of the estimated population is 0.13 below that for the year 1955. Of the total marriages 95.8 per cent. were between bachelors and spinsters, 2.3 per cent. between widowers and spinsters, 1.0 per cent. between bachelors and widows and 0.9 per cent. between widowers and widows. Thus 3.2 per cent. of the men married during the year were widowers and 1.9 per cent. of the women were widows or, in 4 out of every 100 marriages, one or both of the contracting parties had been married before. It should be noted that for the purpose of these calculations, divorced men and women who marry are included with bachelors and spinsters respectively.

Seasonal Incidence of Marriage. The number of marriages celebrated in each month in 1956 was as follows:—

January	488	April	902	July	1,073	October	566
February	514	May	321	August	1,129	November	461
March	1,072	June	981	September	1,208	December	644
Qtrs.: 1st	2,074	2nd	2,204	3rd	3,410	4th	1,671

The concentration of marriages in the summer months of June to September is revealed by this table, September being the most popular of these four months. With the exception of the month of May, the winter months January–February and November–December are the least popular, but the Christmas holiday effect on the marriage incidence is clearly shown by the December figure, as is the effect of the Easter holiday apparent by the March and April figures.

Ages at Marriage. The average age of men marrying in 1956 was 28.8 and of women 25.7. During 1955 this age was 29.2 among men and 26.0 among women. Of the contracting parties 7.4 per cent. of the husbands and 22.2 per cent. of the wives were minors. Further statistics will be found in Abstracts III, IV, V and VI.

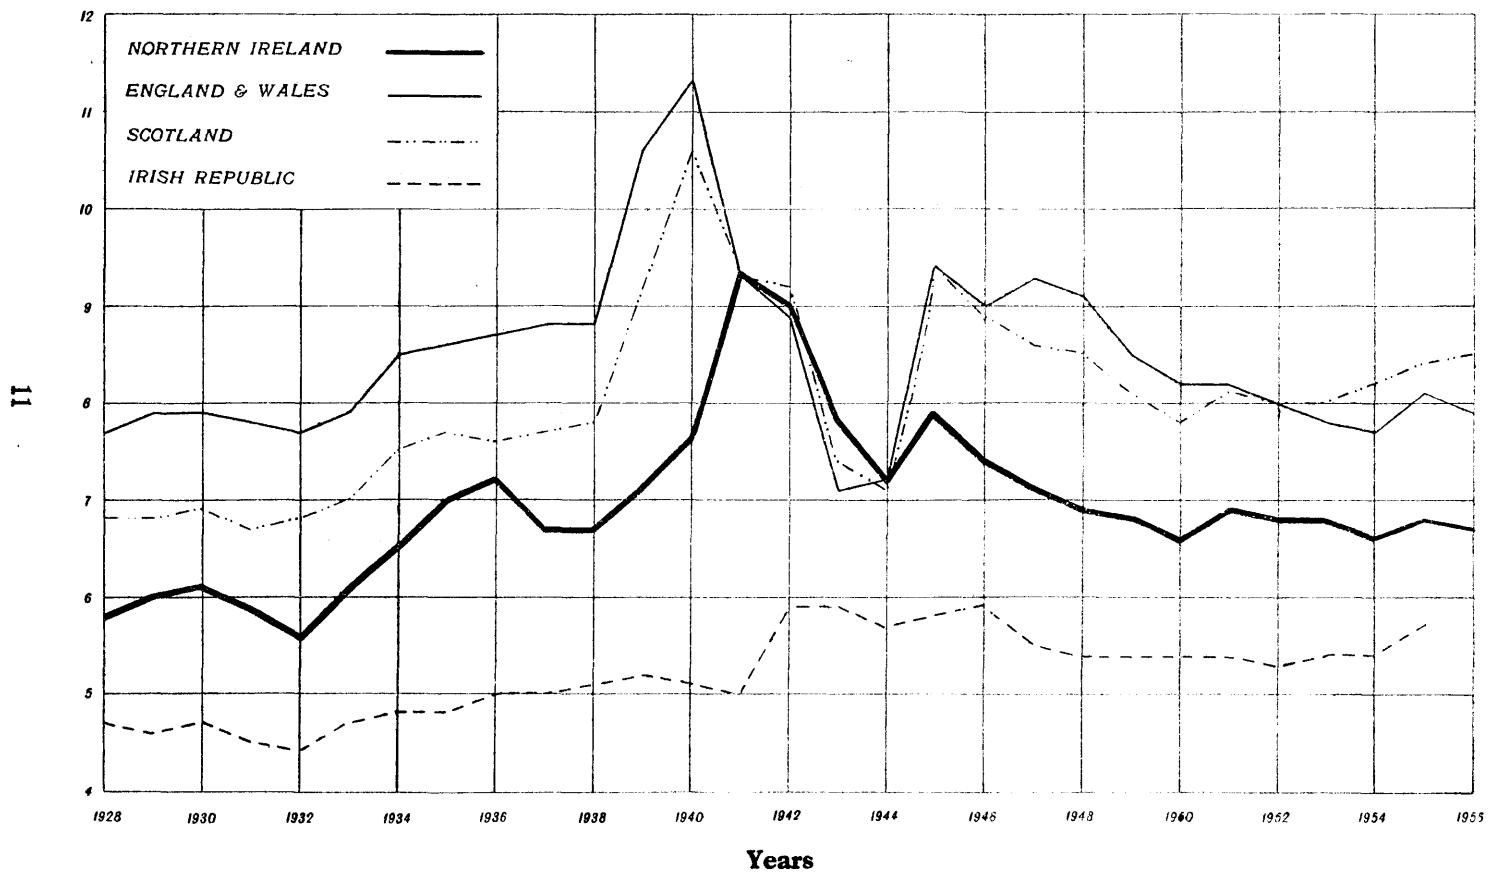

Method of Celebration. Table B shows for Northern Ireland the marriages registered during the years 1927, 1937 and 1951 to 1956 according to methods of celebration. The religious denominations are placed in the order of the number of members at the last Census.

Marriages taking place in Registrars' Offices in the year under review represented 5.6 per cent. of the total marriages as compared with 6.5 in the previous year and 6.7 per cent. in 1930.

TABLE B.—Northern Ireland: Marriages Registered, according to Methods of celebration, 1927, 1937, 1951–56.

YEAR	Roman Catholic	Presbyterian	Church of Ireland	Methodist	In Other Churches	In Registrars' Offices	Jewish	Total Marriages Registered	Total Marriage Rate per 1,000 of Estimated Population
1927	2,091	2,074	2,150	235	233	388	4	7,175	5.74
1937	2,396	2,473	2,426	426	247	647	8	8,623	6.73

* Provisional

BIRTHS

Number and rate. The births registered during the year numbered 29,489, an increase of 524 as compared with the previous year. The birth rate was 21.1 per 1,000 of the estimated population, being 0.3 above the rate for the previous year. Illegitimate births numbered 790, an increase of 100 as compared with the number recorded for 1955, the proportion to total births (2.68 per cent.) being 0.30 above that for the previous year. In England and Wales, Scotland and the Irish Republic, the illegitimate births as percentages of the total births in the year 1956 were 4.8, 4.3 and 1.9 respectively. The figure for the Irish Republic is provisional.

The monthly incidence of births was as follows:—

January	2,508	April	2,677	July	2,558	October	2,457
February	2,202	May	2,646	August	2,395	November	2,319
March	2,506	June	2,589	September	2,426	December	2,206
Qtrs.: 1st 7,216		2nd 7,912		3rd 7,379		4th 6,982	

As is usually the case, the incidence was highest in the second quarter and lowest in the fourth. Compared with 1955, increases of 340, 233 and 210 were recorded in the first, second and fourth quarters respectively, while the third quarter showed a decrease of 259.

TABLE F.—Northern Ireland: Births and Birth Rates by Counties, 1953–1956.

County Tyrone ..	3,142	3,103	3,166	3,044	23.6	23.5	24.0	23.2

* Excluding County Borough.

Proportion of Males to Females. Births of males in Northern Ireland in 1956 numbered 15,100 and those of females 14,389; the proportion of male to female births was therefore 1,049 to 1,000. The corresponding proportions for each of the years 1951–55 were 1,058, 1,067, 1,078, 1,059, and 1,087 respectively.

Multiple Births. Of the 29,489 children whose births were registered during the year, 28,717 were born singly and 772 children were twins. Thus, there were 386 births of twins and no triplets during 1956, compared with 427 and 3 respectively during 1955. Still-births not being registered in Northern Ireland, a birth of one live child and one still-born child is regarded as a single birth, a birth of two live children and one still-born child as a twin birth.

**DIAGRAM II.—Birth Rates in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928–56.
Rate per 1,000 Population.**

DEATHS

Number and Rate. The number of deaths recorded during the year 1956, and the death rate per 1,000 of the population, were 14,858 and 10.6 respectively. The comparative figures for 1955 were 15,407 and 11.1.

Of the total deaths, 7,643 were of males and 7,215 were of females, the equivalent annual death rates being 11.2 and 10.1 per 1,000 of the male and female estimated populations, respectively. The corresponding rates for 1955 were 11.6 and 10.6.

According to the ages stated to Registrars, 6.3 per cent. of the total deaths were of children under 5 years of age and 66.2 per cent. were of persons aged 65 and upwards. There were 97 deaths of persons (29 males and 68 females) aged 95 and upwards; 9 of these deaths (2 males and 7 females) were of persons whose ages at death were returned as 100 years and upwards. The ages of the males were given as 101, and the ages of the females were given as 3 at 100, 1 at 101, 1 at 102 and 2 at 103.

The following table gives a partial analysis of deaths by age for each sex and the percentage of the total deaths in each group.

		Total	Under 1 year	1-14	15-44	45-64	65 and over
Number of deaths	P	14,858	850	176	766	3,232	9,834

Deaths in Hospitals. The number of deaths occurring in hospitals in each of the years 1947-56 is shown in Table H. 41.6 per cent. of the deaths registered in 1956 took place in hospitals (3.6 per cent. in mental hospitals), and the remaining 58.4 per cent. occurred in the deceased person's own home, in private nursing homes, or in places other than hospitals. It will be seen from Table H that the proportion of deaths occurring in hospitals has been increasing steadily through the years. Thirty years ago the proportion of deaths occurring in hospitals amounted to 20 per cent. of the total deaths.

Proportion of Deaths from the Principal Causes. Abstract XV shows the deaths from the principal causes as proportions per 1,000 of the total deaths in certain age groups. It will be seen from this abstract that, for all ages taken together, heart disease bears the greatest proportion to the total deaths, which is the usual experience; and that the deaths from this cause occur mainly among persons of fairly advanced ages. The proportions were high also for cancer, vascular lesions affecting central nervous system, pneumonia and bronchitis.

At ages under one year, apart from congenital malformations, the highest proportions of deaths were caused by birth injuries and atelectasis, premature birth, pneumonia and deaths resulting from accidents.

Between the ages of one and ten the highest proportions were caused by motor vehicle and other accidents, congenital malformations, malignant diseases, pneumonia and diseases of the digestive system.

Between the ages of ten and thirty-five, motor vehicle and other accidents caused by far the largest proportions of deaths. The proportions from malignant diseases, heart diseases, particularly rheumatic heart disease, and diseases of the kidney were also high.

From age thirty-five onwards, heart disease, cancer, vascular lesions affecting central nervous system, bronchitis, pneumonia, tuberculosis, nephritis and deaths resulting from accidents were responsible for the largest proportions of the total mortality.

Table J shows, for each of the principal causes, the numbers of deaths and the death rates for each year since 1953.

Deaths from the Principal Epidemic Diseases. The diseases included in this group are typhoid and paratyphoid fever, scarlet fever, whooping cough, diphtheria and dysentery, influenza, smallpox, measles, typhus and diarrhoeal diseases of children under 2 years of age. The total number of such deaths was 194 giving a rate of 0.14 per 1,000 population, the corresponding figures for 1955 being 208 and 0.15 respectively.

Apart from influenza, details of which are given below, there was an overall decrease in deaths from the other diseases in this group. The most

noteworthy decrease was from diarrhoeal diseases in children under 2 years of age. The number of such deaths amounted to 18 as compared with 48 in 1955; in 1953 107 deaths were recorded from this disease.

During the past 5 years only 2 deaths were ascribed to diphtheria, one each in the years 1953 and 1955; further, it is gratifying to state that no case of this disease was notified to any Health Authority in 1956. In 1935, the year preceding that in which the Local Authorities were authorised to provide immunisation facilities, 155 deaths were assigned to diphtheria.

Of the remaining 16 deaths in this group 13 were from whooping cough, 2 from dysentery and 1 from measles, as compared with 18, 5 and 7 respectively in 1955.

The notifications of certain infectious diseases for each District in Northern Ireland for the year 1956 are shown in Abstract XXIV, and the diseases named are those laid down by Regulations (issued by the Ministry of Health and Local Government) as compulsorily notifiable throughout Northern Ireland. The Abstract does not include certain diseases of which no cases were notified during the year. It should be noted that, as regards measles and whooping cough, only the first case of either of these diseases in a household during each outbreak is required to be notified, unless a period of 2 months intervenes in the case of the former disease and 3 months in the case of the latter.

Influenza. Deaths from influenza numbered 160 representing a rate of 0.11 per 1,000 population as compared with figures of 129 deaths and a rate of 0.09 in 1955. As is usually the case, mortality from this disease was highest in the first quarter of the year.

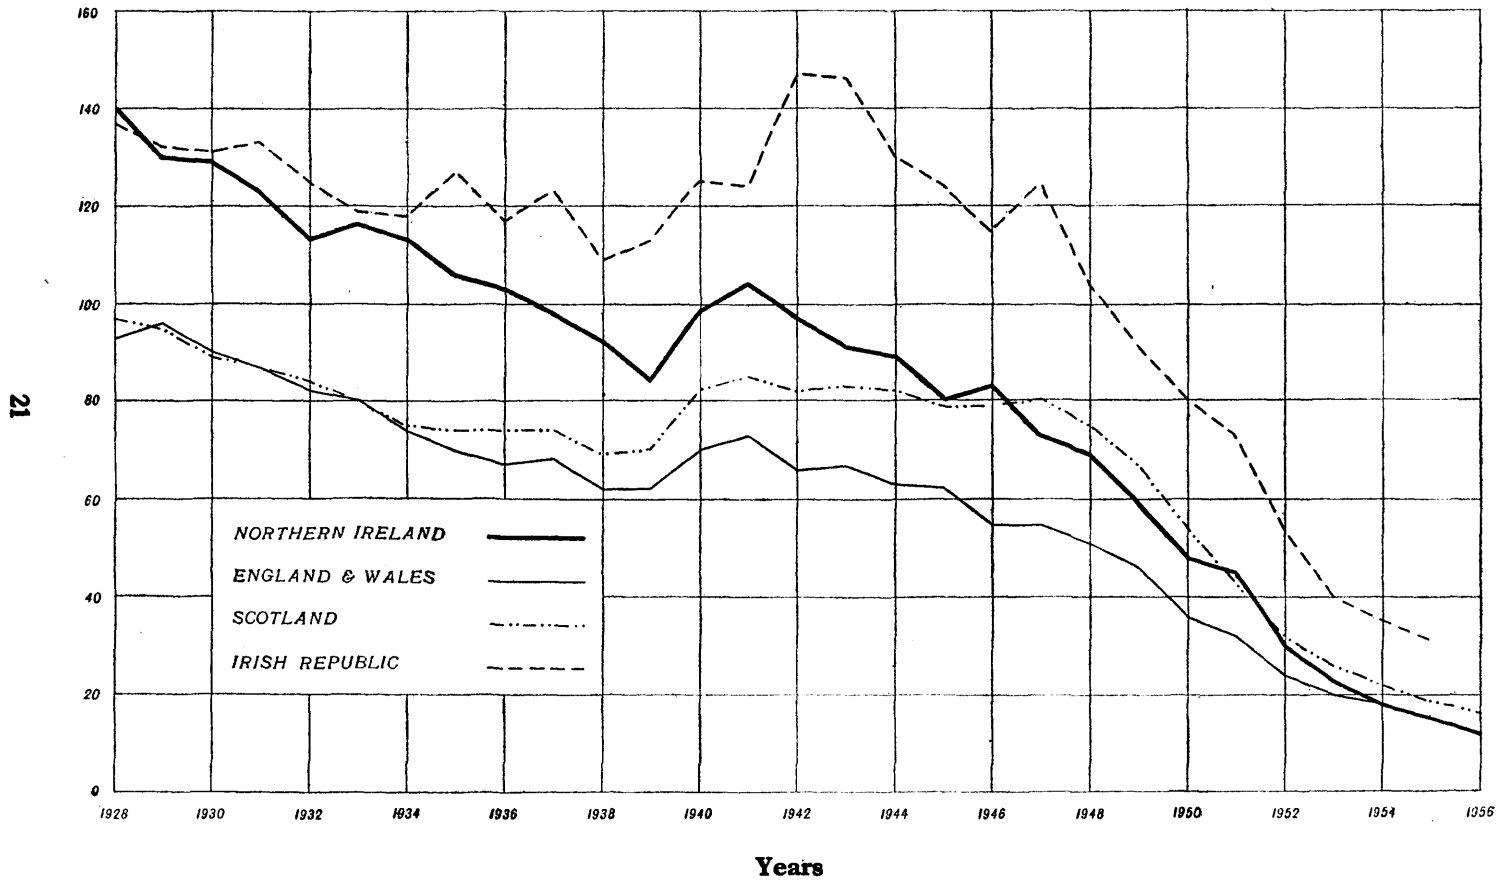

Tuberculosis. The death rate from this cause was 0.12 per 1,000 of the population as against 0.15 in 1955 and the average rate of 0.26 for the five years 1951-55. The death rate for 1956 is the lowest ever recorded, the next lowest being that for 1955. Diagram IV shows that the death rate in Northern Ireland from all forms of tuberculosis has declined very steadily since 1928. The only break in the general trend of improvement occurs during the period covered by the war years, and it will be noticed from the diagram that this rise was experienced in all other parts of the British Isles. The corresponding rates for England and Wales, Scotland and the Irish Republic in 1956 were 0.12, 0.16, and 0.24 respectively. The rate for the Irish Republic is provisional.

From Abstract XV it will be seen that, of deaths of male persons, tuberculous diseases have caused 17 deaths in every 1,000 deaths of persons under 15 years of age and 72 between 15 and 34. Among male persons aged 35 to 54 tuberculosis accounted for 54 deaths in every 1,000 and 41 among males aged 55 and upwards. The corresponding proportions for female deaths were under 15 years of age, 64; 15-34 years, 141; 35-54, 97; and 55 years and upwards 16. Further from Abstract IX it appears that 12 per cent. of the deaths from all forms of tuberculous disease during 1956 occurred between the ages of 15 and 34, as compared with 19 per cent. in 1955.

DIAGRAM IV.—Death Rates from Tuberculosis in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928–56.
Rate per 100,000 Population.

Tuberculosis is in general more prevalent in the cities and towns than in the country districts. In 1956 the rate per 1,000 of the population for all urban areas was 0.15 and for rural areas 0.08. The rates in 1955 were 0.17 and 0.13 respectively.

Tuberculosis of the respiratory system accounted for 89.6 per cent. of the total deaths from tuberculosis, as compared with 85.3 per cent. in 1955.

TABLE K.—Northern Ireland: Deaths and Death Rates from Tuberculosis (All Forms), 1926, 1937 and 1951–1956.

YEAR	MALES		FEMALES		TOTAL	
	Number of Deaths	Rate per 1,000 of the estimated Male population	Number of Deaths	Rate per 1,000 of the estimated Female population	Number of Deaths	Rate per 1,000 of the estimated population

TABLE L.—Northern Ireland: Death Rates per 1,000 of the Population from Tuberculosis (All Forms) by Counties, 1926, 1937 and 1951–56.

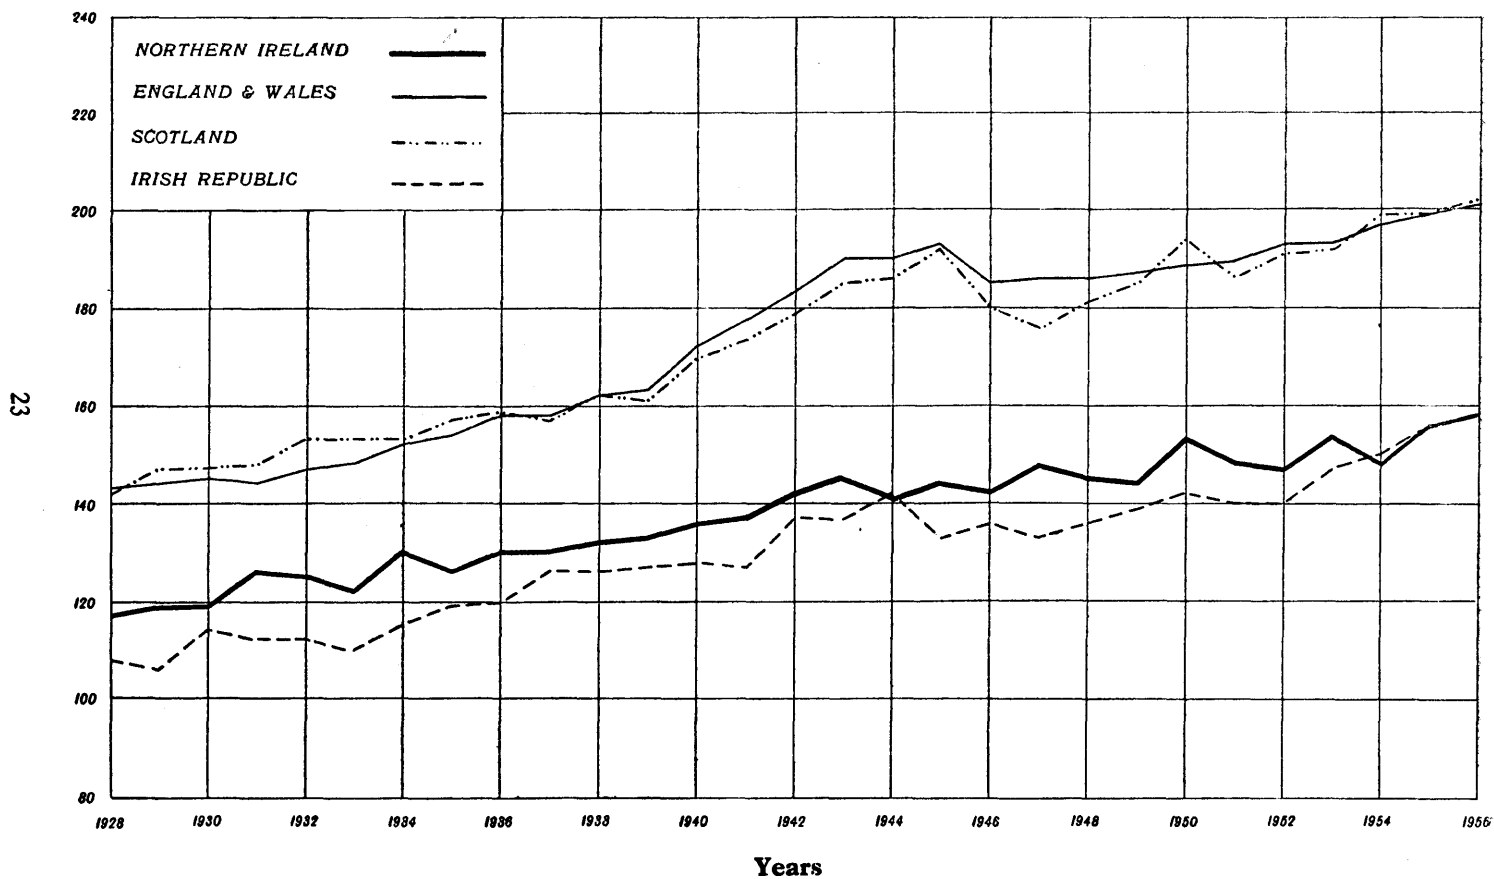

YEAR	Antrim	Armagh	Belfast County Borough	Down	Fermanagh	Londonderry excluding County Borough	Londonderry County Borough	Tyrone
1926	1.29	1.38	1.74	1.43	0.98	1.25	1.37	1.38
1937	0.81	1.14	1.16	0.85	1.03	0.56	1.11	0.92
1951	0.31	0.34	0.59	0.44	0.41	0.25	0.56	0.46
1952	0.20	0.32	0.38	0.29	0.13	0.29	0.39	0.26
1953	0.22	0.27	0.29	0.23	0.15	0.10	0.18	0.14
1954	0.17	0.15	0.22	0.20	0.19	0.07	0.22	0.14
1955	0.14	0.14	0.18	0.15	0.11	0.06	0.17	0.17
1956	0.11	0.10	0.17	0.11	0.04	0.05	0.06	0.08

The Abstracts of causes of death give particulars regarding the sexes and ages of the persons who died from the various forms of tuberculous disease during the year, and also the deaths from tuberculosis allocated to each county and to each administrative area in Northern Ireland.

Table K affords comparison of the summarised figures for 1956 with those for certain preceding years. Table L shows comparisons of the summarised figures for each of the six counties of Northern Ireland and Belfast and Londonderry County Boroughs.

Cancer. The number of deaths from cancer in Northern Ireland during 1956 was 2,201 giving a death rate of 1.58 per 1,000 of the population,

DIAGRAM V.—Death Rates from Cancer in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-56.
Rate per 100,000 Population.

which is 0.02 above the rate for 1955 and 0.07 above the average rate for the previous five years. From Diagram V it can be seen that the general tendency has been for this rate to show a more or less steady increase.

Diagram VI compares the death rates from tuberculosis and cancer; and from this it can be seen that, prior to 1931, tuberculosis accounted for a greater number of deaths, whereas since that date cancer has proved the more dangerous.

The death rates from cancer among males and females were 1.62 and 1.54 respectively. In 1955 the male and female rates were 1.55 and 1.57 respectively.

The most frequent sites of fatal cancer among males during the year were trachea, bronchus and lungs, 260; stomach, 235; intestines, 101; prostate, 89; rectum, 67; and pancreas, 47. Among females the most frequent sites were stomach, 216; breast, 170; intestines, 135; uterus, 75; bronchus and lungs, 72; biliary passage and liver, 55 and rectum, 54.

Prior to 1954, cancer of the stomach proved to be the most frequent site of fatal cancer for both sexes. From 1954 cancer of the lungs, etc., has been the most prevalent among males.

As already stated cancer of the lung is more prevalent among males than females and the rate of increase is substantially greater for the male population. The following figures reveal the difference between the sexes for the past 11 years.

Deaths from Lung Cancer

YEAR	Number		Rate per 100,000 population	
	Males	Females	Males	Females
1946	84	25	13	4
1947	95	22	15	3
1948	119	40	18	6
1949	122	46	18	7
1950	144	29	22	4
1951	154	31	23	4
1952	162	38	24	5
1953	185	45	27	6
1954	209	56	31	8
1955	232	37	34	5
1956	260	72	38	10

It will be seen that there has been a steady increase in the death rate for males, amounting to 192 per cent. over the eleven years.

The figures for females show a fluctuation but the trend is upwards, particularly during the past five years, with a sharp rise in 1956.

The following table affords comparison of the summarised figures of mortality from cancer for all sites with that of lung cancer in—

- A. Belfast County Borough.
- B. Londonderry County Borough.
- C. Nine urban areas each having a population between 10,000 and 21,000.

- D. Eight urban areas each having a population between 5,000 and 10,000.
 E. Other urban areas and all rural areas.

Deaths from cancer per 100,000 population, 1955-56.

		A		B		C		D		E	
		All Sites	Lung	All Sites	Lung	All Sites	Lung	All Sites	Lung	All Sites	Lung
Persons	1955	167	34	148	32	169	16	147	14	152	11
	1956	189	39	148	22	197	22	135	27	138	15
Males	1955	184	63	142	56	158	30	144	27	143	18
	1956	200	63	159	26	214	40	137	53	138	24
Females	1955	152	9	153	11	179	4	150	3	162	4
	1956	180	16	138	19	181	7	133	3	138	7

Rates based on the 1951 Census populations.

In the 1955 Report, it was pointed out that, apart from Belfast, the death rates for *all sites* did not differ materially, but it will be observed that for 1956 there is a marked variation. Group C heads the list in respect of persons and of both sexes.

It is, however, in connection with *lung cancer* that a comparison between the 1955 and 1956 figures is of the greatest interest. In 1955, there was a gradual decrease from the largest concentration of persons to the smallest in practically every instance but, while in regard to persons the 1956 rate for Group A bears approximately the same relation to Group E as the 1955 figure, the figures for the various groups of areas show a substantial variation. In Londonderry, for instance, the rate for males has fallen from 56 to 26, though the rate for females has risen from 11 to 19. For urban areas each with a population between 5,000 and 10,000, the male rate has risen from 27 to 53 and the rate for persons from 14 to 27.

The rates for females in the case of lung cancer has increased for all areas except those in Group D where the rate is unchanged, but it should be noted that mortality from this cause in 1955 was considerably lower than that for the previous year.

It is obvious that, if this information is to prove of any value in the field of cancer research, it will be necessary for the figures to be available for, say, a five-year period as a minimum before a definite trend can be established.

Abstract XVI gives particulars regarding sex, age and sites of fatal cancer during the year 1956. Whilst Abstract XVII shows the number of deaths, by sex and site, in each County and County Borough.

TABLE M.—Northern Ireland: Death and Death Rates from Cancer, 1926, 1937 and 1951-56.

YEAR	MALES		FEMALES		TOTAL	
	Number of Deaths	Rate per 1,000 of the estimated Male population	Number of Deaths	Rate per 1,000 of the estimated Female population	Number of Deaths	Rate per 1,000 of the estimated population
1926	619	1.02	791	1.22	1,410	1.12
1937	777	1.25	891	1.36	1,668	1.30
1951	1,041	1.56	993	1.41	2,034	1.48
1952	1,015	1.52	1,005	1.42	2,020	1.47
1953	1,049	1.55	1,076	1.52	2,125	1.54
1954	1,030	1.52	1,027	1.44	2,057	1.48
1955	1,051	1.55	1,119	1.57	2,170	1.56
1956	1,102	1.54	1,099	1.62	2,201	1.58

Cerebral Haemorrhage, Apoplexy, etc. The deaths assigned to this group (now described as "Vascular lesions affecting central nervous system") numbered 2,126 giving a rate of 1.52 per 1,000 of the population. This rate is the same as that for 1955, and is 0.07 above the average rate for the period 1951-55.

Heart Disease. The deaths from the various forms of heart disease during the year numbered 5,236, the rate per 1,000 of the population being 3.75, which is 0.07 above that for the previous year. The average rate for the quinquennium 1951-55 was 3.67. The death rate from this disease has been more or less steadily increasing over a number of years.

TABLE N.—*Northern Ireland: Deaths and Death Rates from Heart Disease (All Forms), 1926, 1937 and 1951-56.*

YEAR	MALES		FEMALES		TOTAL	
	Number of Deaths	Rate per 1,000 of the estimated Male population	Number of Deaths	Rate per 1,000 of the estimated Female population	Number of Deaths	Rate per 1,000 of the estimated population
1926	1,241	2.04	1,437	2.22	2,678	2.14
1937	1,885	3.02	1,815	2.76	3,700	2.89
1951	2,785	4.16	2,722	3.87	5,507	4.01
1952	2,551	3.81	2,291	3.25	4,842	3.52
1953	2,525	3.74	2,286	3.22	4,811	3.48
1954	2,664	3.94	2,437	3.43	5,101	3.68
1955	2,694	3.97	2,436	3.41	5,130	3.68
1956	2,794	4.10	2,442	3.41	5,236	3.75

Bronchitis. The deaths from bronchitis during the year numbered 532, giving a rate of 0.38 per 1,000 of the population, which is 0.01 above the rate of 1955.

Pneumonia. It should be noted that in the various tables and abstracts deaths from pneumonia are included under two headings. The general heading "Pneumonia" includes deaths of all persons aged over four weeks, and the heading "Infections of the Newborn" includes deaths from pneumonia of children under four weeks old.

Total deaths from pneumonia (under both headings) numbered 543 during the year 1956, the rate per 1,000 of the population being 0.39, compared with a rate of 0.51 in 1955. The rate for 1956 is 0.09 below the average rate for the five preceding years.

TABLE O.—Northern Ireland: Deaths of Women in Pregnancy and Childbirth, 1956.

Detailed List Nos.	Causes of Death	All Ages	Ages

	TOTAL ..	3	.	2	.	.	1	.	.

Pregnancy and Childbirth. The mortality of women during pregnancy and childbirth is classified under two headings, namely—(1) diseases of pregnancy, childbirth and the puerperal state, and (2) diseases or causes combined with pregnancy or childbirth. The causes of death shown in Table O are those to which the various deaths were assigned.

From Table P it will be seen that the deaths from diseases of pregnancy, childbirth and the puerperal state in 1956 yielded a rate of 0.58 per 1,000 live births, which is a decrease of 0.25 as compared with the rate for 1955.

The rate for diseases combined with pregnancy and childbirth decreased from 0.17 in 1955 to 0.10 in the year under review.

*Excluding County Borough.

Violent Deaths. Deaths from violence are classified according to both the external circumstances giving rise to injury, expressed as the "External Cause of Injury", and to the nature of the injury sustained, designated as the "Nature of Injury." Tables R and S show the number of deaths from Violence by the "External Cause of Injury" and "Nature of Injury" respectively.

The number of deaths ascribed to violence during the year was 480 (301 males and 179 females), which is a decrease of 56 on the number registered for 1955, and is equivalent to 3.2 per cent. of the total deaths registered.

Of the 480 deaths, 158 were attributed to transport accidents, of which 152 were due to road traffic accidents, as compared with 166 in 1955. The following figures afford comparison of deaths from road traffic accidents in 1956 with those for the three preceding years by sex and certain age-periods.

DIAGRAM VII.—Maternal Mortality Rates in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928-56.
Rate per 1,000 Live births.

Deaths from Road Transport Accidents

				All ages	Under 5 years	5-14	15-34	35-54	55-74	75 and over
MALES	1953	119	8	15	38	23	20	15
			1954	137	5	15	51	28	25	13
			1955	135	9	12	45	32	29	8
			1956	120	8	11	37	26	27	11
FEMALES	1953	30	8	5	2	3	10	2
			1954	43	9	6	3	10	10	5
			1955	31	4	6	9	4	5	3
			1956	32	1	7	7	5	8	4

Male deaths caused by transport accidents greatly exceed those of females: on average, mortality is heaviest in the age groups 15-34; 35-54 and 55-74 in the case of males and 55-74 and 5-14 in the case of females.

Other fatal accidents accounted for 263 deaths. Of these deaths 121 were ascribed to falls, of which 100 or 83 per cent. were of persons aged 65 years and upwards. Deaths due to drowning numbered 44, and included 7 cases, 6 males and 1 female, in which the Coroners returned verdicts of "found drowned". Of the remaining deaths in this group 23 were due to poisons or poisonous gases, 20 to fire, 12 to mechanical suffocation, 8 to machinery, 4 to firearms and 31 to other accidental causes.

Accidents in the home, which resulted in death, numbered 168, which is equivalent to 64 per cent. of the total deaths from non-transport accidents and exceeds by 16 the number of deaths due to motor vehicle accidents. Further information regarding fatal accidents (other than those caused by transport) is given in Abstract IXa.

During the year there were 54 cases of suicide (33 males and 21 females) and 5 of homicide.

Of the 23 deaths from burns and scalds shown in Table S, 2 were of children under 5 years of age and 9 were of persons over 70 years of age.

TOTAL DEATHS	631	489	536	480	301	179

Uncertified Deaths. The deaths registered as uncertified, i.e., those in which there was neither a medical attendant during the last illness nor an inquest held by a coroner, numbered 188, representing 1.3 per cent. of the total deaths registered. The percentage of uncertified deaths has been falling rapidly during the past thirty years. In 1925 uncertified deaths (2,350) represented 11.9 per cent. of the total deaths, and in 1947, 3.0 per cent. having fallen to 513.

Of the total deaths in rural areas, 87 (1.2 per cent.) were uncertified, which represents a fall of 76 per cent. when compared with 357 registered in 1947. In urban areas, the figure for 1956 was 101 (1.3 per cent.), a fall of 35 per cent. when compared with 156 registered in 1947.

Table T shows the number of uncertified deaths in each County and County Borough, distinguishing between those referred to Coroners in respect of which inquests were considered unnecessary, and those not referred to Coroners.

Deaths of persons aged 65 years and upwards represented 61.7 per cent. of the uncertified cases, and deaths of infants under 1 year of age 3.2 per cent.

Inquests. The circumstances of 813 deaths were considered by the Coroners in 1956, including 163 of the uncertified deaths referred to in the previous paragraph. Inquests were held in 545 of these cases, which represents one inquest for every 27 deaths registered. In 1955 the inquests numbered 539.

Infant Mortality. In the text and tables the term "Neo-natal Mortality" relates to deaths of children under 4 weeks of age, and the term "Infant Mortality" to deaths of all children (including Neo-natal) under 1 year of age.

Deaths of infants under 1 year of age numbered 850, or 29 per 1,000 live births registered. This rate is the lowest ever recorded in Northern Ireland, and it shows a decrease of 8 when compared with the average rate for the previous 5 years. Of the 850 deaths of infants under 1 year of age, 467 were of males and 383 of females, the former number being equivalent to 31 per 1,000 live births of males and the latter to 27 per 1,000 live births of females. The corresponding rates for 1955 were 35 and 30 respectively.

TABLE U.—Northern Ireland: Neo-natal and Infant Mortality Rates per 1,000 Live Births by Counties, 1953-1956.

AREA	Neo-natal mortality per 1,000 Live Births				Infant Mortality per 1,000 Live Births

*Excluding County Borough.

The infant mortality rate for the aggregate of the Urban Districts of Northern Ireland in 1956 was 31 per 1,000 live births, and the rate for the aggregate of the Rural Districts was 27 per 1,000, the corresponding rates for 1955 being 37 and 28 respectively.

In 1956 and 1955 the rates of deaths of infants under 1 year of age were 24 and 25 per 1,000 live births, respectively, for England and Wales; 29 and 30 for Scotland; and 36 and 37 for the Irish Republic. The rate for the Irish Republic for 1956 is provisional.

Deaths of Infants aged under 4 weeks ("neo-natal" mortality) numbered 607, representing a rate of 21 per 1,000 live births, and is equivalent to 71.4 per cent. of all deaths of children under 1 year of age. The corresponding figures for 1955 were 612, 21 and 65.2 per cent. respectively.

TABLE V.—*Infant Mortality Rates for Belfast Co. Borough and Londonderry Co. Borough with comparative Rates for Towns of approximately the same Populations in Great Britain, 1956.*

TOWN	Population	Deaths of Infants under 1 year of Age per 1,000 Live Births	Birth Rate per 1,000 Population
BELFAST	444,800	29	18.5
Bristol	440,500	19	15.2
Leeds	508,600	27	15.9
Sheffield	499,000	24	14.1
Edinburgh	466,900	24	16.0
LONDONDERRY	51,700	39	29.3
Burton-on-Trent... ..	48,910	21	16.9
Dewsbury	53,270	23	16.2
Crewe	51,510	25	14.7
Shrewsbury	46,850	29	15.4
Lancaster	49,530	27	13.4
Ayr	43,400	29	18.3
Kirkcaldy	51,500	26	17.5

NOTE—The populations are as estimated at mid-year, 1956.

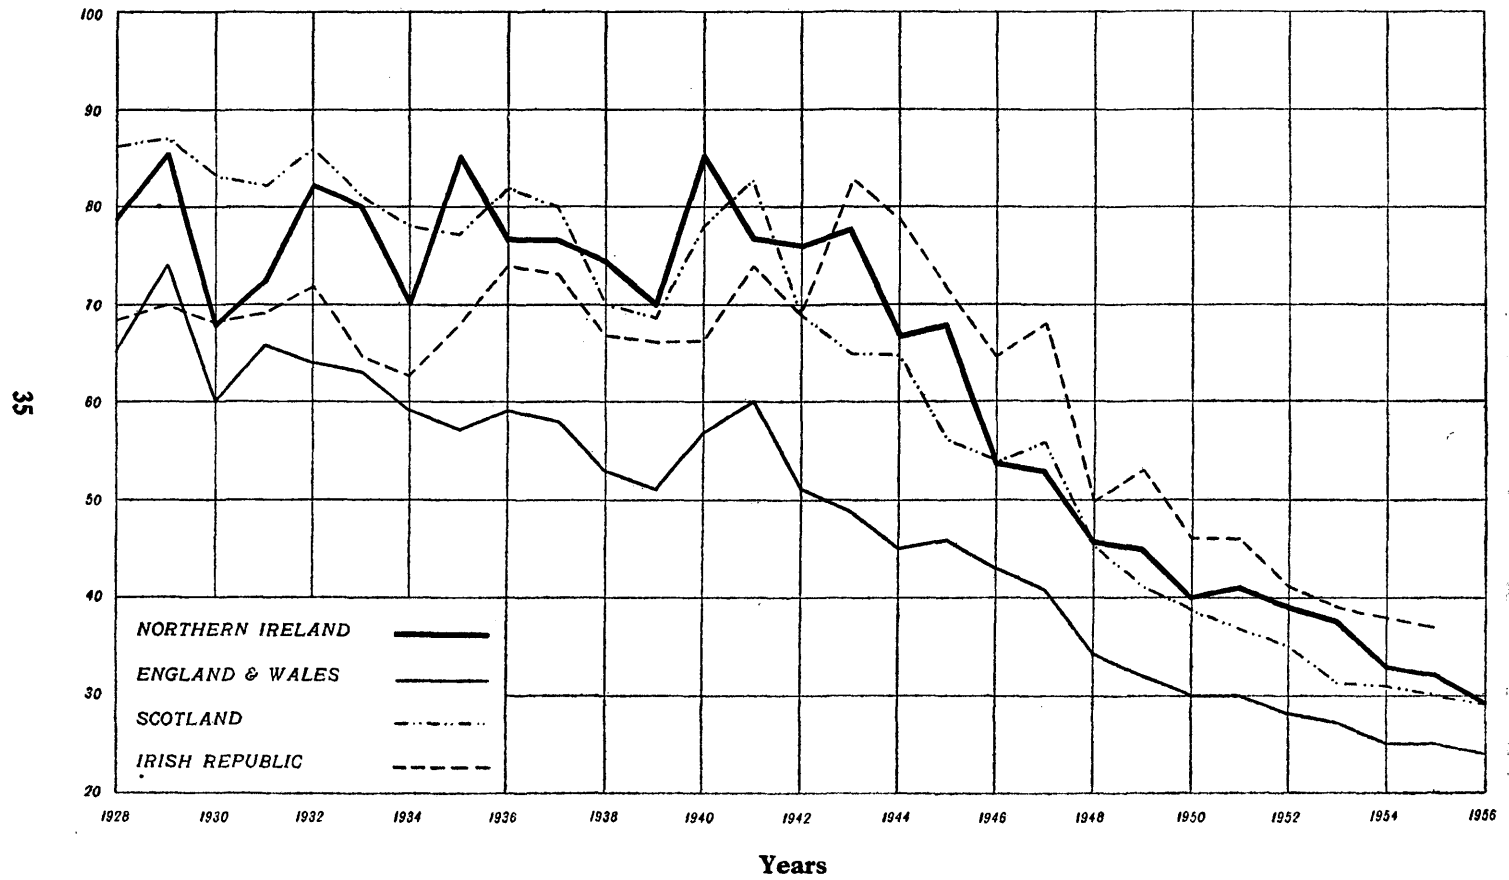

In Table V the infant mortality rates and birth rates for Belfast and Londonderry County Boroughs are compared with those for towns of approximately the same populations in Great Britain. Whilst the infant mortality rates for these Northern Ireland towns do not yet compare favourably with those for cross-channel towns of comparable size, there has been an immense reduction since 1942 when the rates were: Belfast 92, Londonderry 90.

Abstract XXII gives the number of deaths of children under 1 year of age for Northern Ireland by Counties and County Boroughs (also for the aggregates of the urban and rural areas) for the years 1953–56. For the last of these years the numbers are given by sex and age-periods.

The number of infant deaths for 1956 by age and causes of death are given in Abstract XX, together with the infant mortality rates by causes.

Abstract XI gives the number of infant deaths, together with the number of births, for each administrative area in Northern Ireland.

DIAGRAM VIII.—Infant Mortality Rates in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1928–1956.
Rate per 1,000 Live Births.

Mortality among Illegitimate Children. Deaths of illegitimate children under 1 year of age numbered 34 in 1956, which is equivalent to a rate of 43 per 1,000 of the illegitimate live births registered, as compared with a rate of 43 for the previous year. The corresponding rates for legitimate children in 1956 and 1955 were 28 and 32 per 1,000 live births respectively.

TABLE W.—Northern Ireland: *Illegitimate Neo-Natal and Infant Mortality Rates per 1,000 Illegitimate live Births by Counties, 1953–1956.*

AREA	Illegitimate Neo-natal Mortality per 1,000 Illegitimate Live Births				Illegitimate Infant Mortality per 1,000 Illegitimate Live Births			
	1953	1954	1955	1956	1953	1954	1955	1956

County Fermanagh	.	.	.	29	50	63	27	29
*County Londonderry	19	24	28	19	28	24	42	38
Co. Tyrone ...	36	17	45	39	91	25	45	53

*Excluding County Borough.

Deaths of illegitimate infants aged under 4 weeks (illegitimate neo-natal mortality) numbered 24, representing 70.6 per cent. of the total deaths of all illegitimate children under 1 year of age. The corresponding figures for 1955 were 22 and 60.5 per cent. respectively.

Abstract XX gives the number of deaths and mortality rates of illegitimate children under 1 year of age by the principal causes. Most of the rates are considerably in excess of the corresponding rates for all children, but it should be noted that the rates for some of the causes are based on very small numbers of deaths.

Abstract XXIII shows the number of deaths of illegitimate children under 1 year of age for Northern Ireland by Counties and County Boroughs, also for the aggregates of the urban and rural areas, for the years 1953–56. The sex and age distribution is shown for the year 1956.

MIGRATION

The population figures ascertained at each census enable the net migration during the inter-censal periods to be calculated. The last two censuses in Northern Ireland were taken on 28th February, 1937, and 8th April, 1951. The following statement reveals that, during the intervening period of a little over 14 years, there was a net outward movement of 67,267 persons. Gross figures for migration inwards and outwards are not available. The table relates to migration to and from all countries, including other parts of the British Isles.

	Males	Females	Total
Population, Census of 1937	623,154	656,591	1,279,745
Births, 1937-51	207,270	194,914	402,184
Deaths, 1937-51	122,452	121,289	243,741
Natural Increase	84,818	73,625	158,443
Population 1937 plus Natural Increase ...	707,972	730,216	1,438,188
Population, Census of 1951	667,819	703,102	1,370,921
Net movement outwards	40,153	27,114	67,267

The term "natural increase" represents the excess of births over deaths. The net movement outwards during the two inter-censal periods immediately preceding the census of 1937 amounted to: 1911-26, 107,573 persons, and 1926-37, 57,651 persons.

According to returns furnished by the Board of Trade (Statistics Division), and the Central Statistics Office of the Irish Republic the number of emigrants of British nationality from Northern Ireland to countries outside Europe during 1956 was 5,088, and the number of immigrants arriving in Northern Ireland from those countries was 896. The following tables give the available figures for the years 1936 to 1956, with the exception of the period 1939-45, during which records were not maintained, and a partial analysis of the age and sex distribution of migrants in 1956. Figures were not furnished by the Central Statistics Office prior to 1953.

YEAR	Emigrants	Immigrants	Outward (—) or Inward (+) Balance
1936	655	1,273	+ 618
1937	835	1,011	+ 176

THE WEATHER

Reports on the weather experienced in Northern Ireland during each month of the year 1956, as furnished by the Director of the Meteorological Office, England, are published in the Quarterly Returns of Births, Deaths, and Marriages for that year. Table X shows the Air Temperature, Rainfall and Sunshine recorded during the year, 1956.

Outstanding features of the weather during the year 1956 were the dry spring, the cold rough and wet summer, the cold February and the very wet August.

Rainfall was only about half the average during February but approached twice the average during August. Taking the year as a whole it was slightly

below the average; with six months below and six months above the monthly averages. The first half of the year was the drier, there being four consecutive months, February–May, with rainfall below the average (the driest February to May period since records began in 1920), followed by three months July to September with more than average rainfall. It was the wettest August since records began and more rain fell in August 1956 over the Province as a whole than during the four months February to May.

Temperature over the year as a whole was below the average and, as with rainfall, there were as many months with temperature above the average as below. It was below the average during the three summer months June, July and August and above during the last four months of the year. February and August were unusually cold months temperatures being $4\frac{1}{2}^{\circ}\text{F}$. and $3\frac{1}{2}^{\circ}\text{F}$. below the respective monthly averages.

Sunshine over the year was slightly below the average with the first half of the year sunnier than the second. Only October sunshine was above average during the second half of the year, November and December being particularly dull.

Some snow showers fell in *January*, especially during the cold second week when temperature over the Province was 8°F . below the average for the period, but during *February* most of the precipitation, except during the milder periods 3rd–9th and 26th–29th, fell in the form of snow. Temperature did not rise above freezing during the first two days of the month, but the coldest day was the 19th when temperature fell to 11°F . at Aldergrove and snow lay on the ground at Ballykelly 3 in. deep. Except for last year, 11°F . was the lowest air temperature recorded in the Province since 1917. Widespread gales occurred on February 29, wind exceeding 60 kt. in gusts locally.

March and *April* were dry and sunny, March being the only one of the first four months of the year with more than average temperature. The aurora was observed from several places in the Province on March 10 and 11 and again on April 27 and 28. The third week of April was exceptionally sunny and dry but was also cold; sunshine was nearly twice the average for the period and there was only 3 per cent. of the normal rainfall; mean temperature was 3°F . below average.

May, the fourth successive dry month of the year was warm on the whole, especially during the first part of the month, but ground frost was widespread for several nights after the 17th; at Aldergrove on the 19th ground temperature fell to 20°F .

During the very wet summer the monthly total of rainfall progressively increased each month during *June*, *July* and *August*, but sunshine was about the average throughout. The summer was unusually rough as well as wet. Gales were widespread on July 29 and again on August 13: on the first occasion mean wind speed at Aldergrove was 22 kt. or more for eight consecutive hours; on the second, wind reached 55 kt. in gusts at Londonderry, and $2\frac{1}{2}$ in. of rain was recorded at Foffany Reservoir in 24 hours.

Rainfall was again above the average during *September* and the month on the whole was very dull, as were also November and December. September temperature was about average although during the last week it was about 5°F . warmer than usual.

October and *November* were dry; the second week in October was particularly fine with rainfall only 33 per cent. of the average for the period and sunshine above average, and during the week November 11–17 rainfall was only about $\frac{1}{4}$ of the usual amount. The first week of *December* was exceptionally mild and dry, temperature being 9°F . above the average for the period but rainfall only 20 per cent. A cold spell during Christmas week brought sleet on Christmas day and moderate falls of snow on Boxing day, which lay 4 in. deep at Castle Archdale and Hillsborough.

The table below gives the monthly deviation from average mean temperature in degrees Fahrenheit and the monthly rainfall and sunshine expressed as percentages of average.

NOTE—In this table the rainfall average is that for the period 1881-1915 : the air temperature and sunshine average relate to the period 1921-50.

GENERAL

The figures contained in this Report may be regarded as final, and as superseding the provisional figures already published for the year 1956 in the Registrar-General's weekly and quarterly returns. It should be noted that statistics of deaths for years 1941-49 relate to civilians only.

The value of the statistical information concerning deaths contained in the Registrar-General's Annual Reports and other publications is to a large extent dependent on the degree of care and accuracy with which the members of the medical profession enter the required particulars on the form of medical certificate of the cause of death. The particulars so given are incorporated in the death entries, and thus in every case in which a person had been attended in his or her last illness by a medical practitioner, the medical certificate given by the latter forms the basis upon which the cause of death is classified.

Comparisons with rates (births, deaths, etc.) recorded in other parts of the British Isles are included in several tables and diagrams. These comparisons are substantially correct but, owing to changes in the mode of computing population figures in certain countries in certain years, complete accuracy has not been achieved. The figures shown for the Irish Republic in respect of the year 1956 are provisional.

Generally speaking, the classifications adopted for the purposes of this Report are the Intermediate and Abbreviated Lists contained in the "Manual of the International Statistical Classifications of Diseases, Injuries and Causes of Death, 1948."

Abstract IX shows the deaths classified under the headings of the Intermediate List (slightly modified to give a more detailed classification in the case of certain diseases), whilst the causes shown in Abstracts X and XV and certain tables in the text are in accordance with the Abbreviated List. The Detailed List numbers have also been given in Abstract IX for the purpose of reference.

In general in the tables and abstracts, dots (.) are used to indicate "none", and dashes (—) are used to indicate that information cannot be given or that the headings are not applicable.

Throughout the Report, births and deaths have been allocated to the district of normal residence, births having been assigned to the districts containing the normal residence of the parents, and deaths to the districts containing the normal residence of the deceased persons.

ADMINISTRATION

Introductory. The administrative functions of the office of the Registrar-General comprise the registration of births, deaths, marriages and adoptions, and the provision or supervision of machinery for dealing with preliminaries to marriages other than those according to the rites of the Roman Catholic Church.

Buildings licensed or registered for Marriages. The numbers of places of worship (other than those belonging to the Roman Catholic Church) in which marriages could be solemnised, as at 31st December in each of the years 1954, 1955 and 1956 were as follows:—

DENOMINATION	1954	1955	1956
Church of Ireland	395	396	397
Presbyterian	502	502	504
Methodist	153	156	157
Others	232	231	233
TOTAL ...	1,282	1,285	1,291

State of Registration. The measures adopted for particulars of births notified under the Notification of Births Act, 1907, to be furnished to Registrars in the two County Boroughs have continued to be of value in securing the registration of a number of births which have not been registered within the prescribed period of 6 weeks. In connection with the registration of deaths, returns of burials made to Registrars by Clerks of Burial Boards and Cemetery Companies have been of assistance.

Births and deaths not registered within a year of their occurrence can be recorded only with the authority of the Registrar-General. During 1956 such authority was granted for the registration of 32 births, as compared with 52 in 1955 and 48 in 1954. The registration of 9 deaths was authorised as compared with 14 in 1955 and 10 in 1954.

Legitimacy Act (N.I.), 1928. Under this Act an illegitimate child whose parents have married is, subject to certain conditions, legitimated, and the Registrar-General is empowered to authorise the re-registration of the birth. During 1956 the re-registration of the births of 119 children was authorised under the Act, the figures for 1955 and 1954 being 113 and 104 respectively.

Adoption of Children Act (N.I.), 1950. Registers of children adopted under the provisions of the above Act and of the previous Adoption Act of 1929 are kept in the General Register Office, to which the Adoption Orders made by the Courts are communicated. A certified copy of an entry in an Adopted Children Register is evidence of adoption, and is also evidence of the date of birth of the adopted child. The children whose adoptions were recorded in the Adopted Children Registers during 1956 numbered 251, whilst the figures for 1955 and 1954 were 259 and 185 respectively.

Searches and Certificates. The original records of births, deaths, and marriages registered in Northern Ireland are, in general, in the custody of local registration officers, who issue annually therefrom many thousands of certificates. An indication of the extent to which Government Departments and the public have utilised the facilities for searching in the indexes and obtaining certificates from records in the General Register Office for Northern Ireland (including the Adopted Children Register) is afforded by the following table:—

YEAR	Official		Paid			Fees Received			
	Searches	Certificates	Searches	Certificates					
				Full	Short				
1927	56	29	109	112	—	£	19	9	0
1937	94	88	363	290	—	55	2	0	
1951	222	220	1,683	1,609	1,270	317	0	6	
1952	170	168	1,819	1,796	1,298	347	18	0	
1953	114	114	1,926	1,961	1,454	377	15	6	
1954	259	259	2,068	2,117	1,426	403	13	6	
1955	328	316	2,338	2,361	1,744	456	11	6	
1956	352	331	2,431	2,668	1,990	665	4	6*	

* Fees for certificates and searches were increased with effect from the 21st April, 1956.

Verifications. Requests for the verification of particulars of events registered are received from Government Departments in connection with claims for Family Allowances, Pensions, etc. During the year the number of cases dealt with was 29,921, out of which 22,561 were checked from the records in this office and 7,360 events (where records were not available at headquarters) were referred to local officers.
