Belfast, 2
28th June 1966

TO THE RIGHT HONOURABLE

HERBERT V. KIRK, B.COM.SC., F.C.A.,
J.P., M.P.,

Minister of Finance for Northern Ireland

Sir,

I have the honour to submit the Forty-fourth Annual Report on the Births, Still-births, Deaths, and Marriages registered in Northern Ireland, together with Abstracts of the particulars of such registrations. The Report relates to the year ended 31st December 1965. The Abstracts have been prepared for presentation to Parliament, pursuant to the provisions of statutes governing the registration system. The Report draws attention to the salient features of the vital statistics contained in the Abstracts, and information is given relating to notification of infectious diseases, congenital abnormalities, migration and the weather.

I have the honour to be, Sir,

Your obedient Servant,

W. G. NICHOLL,

Registrar General of Births, Deaths, and
Marriages for Northern Ireland

3 Death rates per 1,000 population	21
4 Death rates from cancer per 100,000 population	26
5 Maternal mortality rates per 1,000 live births	30
6 Infant mortality rates per 1,000 live births	32

GENERAL NOTES

The figures contained in this Report may be regarded as superseding the provisional figures already published for the year 1965 in the Registrar General's weekly and quarterly returns.

The value of the statistical information concerning deaths contained in the Registrar General's Annual Reports and other publications is to a large extent dependent on the degree of care and accuracy with which the members of the medical profession enter the required particulars on the form of medical certificate of the cause of death.

Throughout the Report, births and deaths have been recorded according to date of registration and not to date of occurrence. They have also been allocated to the district of normal residence, if in Northern Ireland, births having been assigned to the districts containing the normal residence of the parents, and deaths to the districts containing the normal residence of the deceased persons. Events occurring in Northern Ireland relating to persons whose normal residence is outside Northern Ireland have been assigned to the district of occurrence.

Rates are assessed per 1,000 of the estimated home population as at the 30th June unless otherwise stated. Marriage rates relate to the number of marriages solemnised, not to the number of persons married.

Comparisons with rates (births, deaths, etc.) recorded in other parts of the British Isles are included in several tables and diagrams. These comparisons are substantially correct but it should be remembered that (with the exception of Diagram 3) they are crude rates only and take no account of changes in or differences between the age and sex structure of the populations.

Generally speaking, the classifications adopted for the purposes of this Report are the Detailed and Abbreviated Lists contained in the "Manual of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1955."

The term cancer, where used, refers to all malignant neoplasms and neoplasms of the lymphatic and haematopoietic tissues, except Hodgkin's disease, leukaemia and aleukaemia (I.S.C. Nos. 140-200, 202, 203 and 205).

Where more than one cause of death is reported, the death is classified according to the underlying cause, i.e. the disease or injury which initiated the train of morbid events leading directly to death. This method of classification is followed even if the deceased may have recovered from the underlying cause long before the date of death.

In the text and tables the term "neonatal mortality" relates to deaths of children under 4 weeks of age and the term "infant mortality" to deaths of all children (including neonatal) under 1 year of age. Perinatal deaths are deaths of infants under one week plus still-births.

In general in the tables and abstracts, dots (·) are used to indicate "none", and dashes (—) are used to indicate that information cannot be given or that the headings are not applicable.

REPORT 1965

SUMMARY

The rates for live births and marriages were lower than in 1964, the death rate was higher and the still-birth rate remained the same.

The following figures indicate the general trend of marriages, births and deaths over the past thirty years. More detailed comparisons will be found in Tables A and A1.

		1935	1955	1964	1965

POPULATION

The population of Northern Ireland estimated as at 30th June, 1965 was 1,469,000 persons, an increase of 11,000 over the mid 1964 figure. This estimate, comprising civilians and members of H.M. Forces stationed in Northern Ireland, is based on the census taken on 23rd April, 1961 (1,425,042 persons) revised to allow for natural increase and net immigration. During the year ended 30th June, 1965, the natural increase of 19,000 (approx.) was off-set by net migration of 8,000 (approx.) Further details regarding population are shown on page 41.

TABLE C. *Populations of counties, county boroughs and urban and rural areas as recorded at the censuses of 1901, 1926, 1951 and 1961, and as estimated at mid-year 1965.*

The 1961 Census population by age and sex for Northern Ireland and for counties and county boroughs is given in Abstract 10.

MARRIAGES

Number and rate Marriages registered during the year numbered 10,452 giving a rate of 7.12 per 1,000 population. The corresponding number and rate for 1964 was 10,614 and 7.28 respectively. In 9,967 (95.4 per cent.) of the total marriages both contracting parties were single; in 357 (3.4 per cent.) one or both were widowed and in 154 (1.5 per cent.) one or both were divorced. Of every 1,000 persons married, 8 were previously divorced. This rate is 1 more than that for 1964; comparative rates for the years 1955 and 1945 were 10 and 5 respectively. Further details are given in Abstract 2.

The number of marriages celebrated in each month in 1965 was as follows:

January . 454	April . 835	July . 1,069	October . 915
February . 592	May . 438	August . 1,103	November 498
March . 1,415	June . 928	September 1,620	December 585
Qtrs.: 1st . 2,461	2nd . 2,201	3rd . 3,792	4th . 1,998

This shows that the period July to September was the most popular quarter for weddings, September heading the monthly totals with 1,620. As usual, May was the least popular month.

Ages at marriage Although the most popular age for marriage was 22 years for men and 21 years for women, the arithmetical average age of men marrying in 1965 was 27.2 and of women 24.5. During 1964 this age was 27.3 among men and 24.6 among women. In 1955, the average age was 29.2 for men and 26.1 for women. The mean age at marriage of persons marrying for the first time in 1965 was 26.3 years for men and 23.9 years for women. Of the contracting parties 11.4 per cent. of the husbands and 30.2 per cent. of the wives were minors, the relative figures for 1955 being 6.4 per cent. and 20.5 per cent. Further statistics will be found in Abstracts 3, 4, 5 and 6.

Method of celebration Table D shows the marriages registered during the years 1927, 1937, 1951 and 1958 to 1965 according to the form of celebration and Table D1 gives further details of marriages in 1965.

Marriages taking place in registrars' offices in the year under review represented 5.2 per cent. of the total marriages as compared with 6.2 in the previous year.

TABLE D. Northern Ireland: Marriages registered according to form of celebration, 1927, 1937, 1951, 1958-1965.

YEAR	Roman Catholic	Presbyterian	Church of Ireland	Methodist	Other denominations	In Registrars' Offices	Total marriages registered	Total marriage rate per 1,000 of estimated population

LIVE BIRTHS

Number and rate Live births registered during 1965 numbered 33,890, 455 less than in 1964. The birth rate was 23.1 per 1,000 of the estimated population, being 0.5 below the rate for 1964. For the tenth year in succession it was higher than in any other country of the British Isles.

The monthly incidence of births was as follows:

January	. 2,913	April	. 2,817	July	. 2,974	October	. 2,777
February	. 2,615	May	. 2,911	August	. 2,755	November	. 2,645
March	. 3,150	June	. 2,866	September	. 2,844	December	. 2,623
Qtrs.: 1st	. 8,678	2nd	. 8,594	3rd	. 8,573	4th	. 8,045

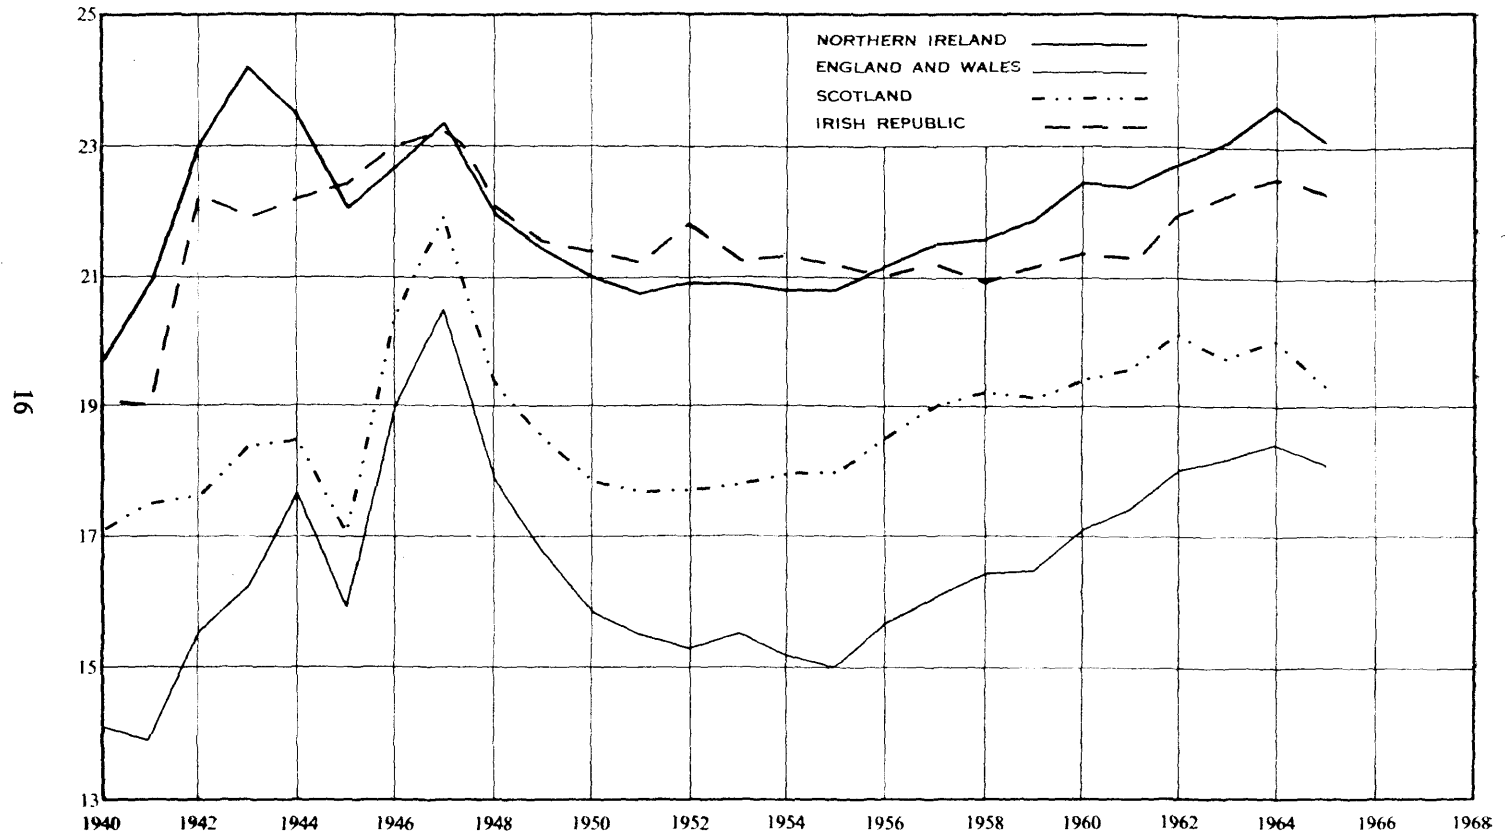

Compared with 1964, the second, third and fourth quarters showed decreases of 675, 202 and 115 respectively whilst the first quarter showed an increase of 537.

TABLE E. Northern Ireland: Live births, numbers and rates by counties, 1962-1965.

COUNTIES	Number				Rate per 1,000 of the population			
	1962	1963	1964	1965	1962	1963	1964	1965

*Excluding County Borough.

DIAGRAM 2. Birth rates (crude) in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1940-65.
Rate per 1,000 population.

Births registered during 1965, where the normal residence of the parents was outside Northern Ireland, numbered 323 as compared with 288 in 1964. In 138 cases, an address in the Irish Republic was given, and of these, 69 births occurred in hospitals: the 1964 figures were 129 and 48 respectively. In 13 cases the parents were itinerants having no fixed abode and 12 of these births took place in hospitals.

Proportion of males to females Births of males in Northern Ireland in 1965, numbered 17,702 and those of females 16,188, the proportion of male to female births being 1,094 to 1,000. The corresponding proportions for each of the five years 1960-64 were 1,080, 1,058, 1,067, 1,077 and 1,053 respectively.

Illegitimate births The number of illegitimate births was 995. This was 20 less than in 1964. The proportion to total live births (2.94 per cent.) was 0.02 below that for the previous year. In England and Wales, Scotland (provisional) and the Irish Republic, the illegitimate births as percentages of the total live births in the year 1965 were 7.7, 5.8 and 2.2 respectively.

TABLE E1. Northern Ireland: Illegitimate live births by counties, 1962-65.

*Excluding County Borough

Multiple births Up to and including 1960, the birth of one live and one still-born infant was regarded as a single birth and the birth of two live infants and one still-born infant as a twin birth. Since 1961 still-births have been registered and these are now being taken into account to obtain accurate figures for single and multiple births. Of the 33,890 live births, 33,137 were the product of single pregnancies, 744 of twin pregnancies and 9 of triple pregnancies. Table E2 gives the multiplicity of all births—live and still.

TABLE E2. Northern Ireland: Multiple births, 1965.

Pregnancy	Product	Con- finements	Live births	Still-births
Single	1 live born	33,137	33,137	—
	1 still-born	638	—	638

	3 still-born	—	—	—
TOTALS		34,161	33,890	660

STILL-BIRTHS

Number and rate The number of still-births registered in 1965 was 660 giving a rate of 19 per 1,000 births (live and still). The relative numbers and rates for the period 1962-1965 are shown in Table F. Comparative 1965 figures in England and Wales and Scotland were 13,841 and 16 and 1,835 and 18 respectively. Still-birth registration is not in operation in the Irish Republic.

TABLE F. *Northern Ireland: Still-births and rates per 1,000 births (live and still) by counties 1962-1965.*

Abstract 14 shows the numbers of still-births in administrative areas by sex. The number of still-born children who would have been illegitimate had they been born alive was 28 representing 4.2 per cent. of all still-births. Twenty-two of the still-births were the product of multiple confinements further particulars of which will be found in Table E2 on page 17. In 431 cases the birth occurred after less than 37 weeks gestation and/or the weight of the foetus was not more than 5½ lbs. Of the 660 still-births 548 were certified by doctors, 107 by mid-wives and 5 by coroners. Post-mortem examinations were held in 138 cases. Abstract 9 shows still-births by cause and period of gestation. The percentage of still-births which occurred in hospitals in 1965 was 90.5 compared with 92.6 per cent. in 1964.

TABLE F1. *Northern Ireland: Still-births in hospitals etc., and parity* of mother 1965.*

PLACE OF CONFINEMENT	TOTAL STILL-BIRTHS	PARITY* OF MOTHER										
		0	1	2	3	4	5	6	7	8	9	10 and over
In hospital	597	168	95	90	72	37	37	26	22	14	11	25
In own homes, nursing homes and all other places	63	16	7	11	10	9	5	3	1	.	1	.
TOTAL	660	184	102	101	82	46	42	29	23	14	12	25

*Parity has been taken to mean the number of children born (live and still) to the mother as the result of previous pregnancies.

TABLE F2. Northern Ireland: Still-births and still-birth rates per 1,000 births (live and still) by cause and sex, 1965.

International Numbers (Y30-Y39)	Cause	Number		Rate	
		Males	Females	Males	Females
	All causes	323	337	17.92	20.39
Y30, Y31	Acute and chronic diseases in mother	10	9	0.55	0.54
Y32.3, .4, Y33	Toxaemias	38	35	2.11	2.12
Y32.2	Antepartum haemorrhage	35	28	1.94	1.69
Y34, Y37	Difficulties in labour	20	17	1.11	1.03
Y36	Placental and cord conditions	74	57	4.11	3.45
	Congenital malformation of foetus:—				
Y38.0	Anencephalus	31	73	1.72	4.42
Y38.1	Hydrocephalus	15	12	0.83	0.73
Y38.2	Spina bifida	3	3	0.17	0.18
Y38.3	Other malformation of the central nervous system	1	3	0.06	0.18
Y38.4	Malformation of the cardiovascular system	1	.	0.06
Y38.5	Malformation of other specified system or part	3	3	0.17	0.18
Y38.6	Monster		1		0.06
Y38.7	Other and unspecified malformations	10	6	0.55	0.36
Y32.0, .1, .5, Y35, Y39.0-.3	Other defined causes	15	34	0.83	2.06
Y39.4-.6	Ill-defined or unknown causes	68	55	3.77	3.33

Congenital malformations (Y38) caused 165 still-births (i.e. 25 per cent. of the total). This group was also the main cause in 1964 when the corresponding figures were 146 and 21.5 respectively.

TABLE F3. Northern Ireland: Still-births by age and parity* of mother 1965.

*See definition at foot of table F1.

DEATHS

Number and rate The number of deaths recorded during the year 1965 and the death rate per 1,000 of the population were 15,551 and 10.6 respectively. The comparable figures for 1964 were 15,354 and 10.5.

The monthly incidence of deaths was as follows:

January . 1,537	April . 1,291	July . 1,097	October . 1,243
February . 1,384	May . 1,263	August . 1,121	November 1,198
March . 1,523	June . 1,201	September 1,156	December 1,537
Qtrs.: 1st . 4,444	2nd . 3,755	3rd . 3,374	4th . 3,978

Of the total deaths 8,200 were of males and 7,351 were of females, the equivalent annual death rates being 11.4 and 9.8 per 1,000 of the male and female estimated populations, respectively. The corresponding rates for 1964 were 11.3 and 9.8.

According to the ages stated to registrars, 960 (6.2 per cent.) of the total deaths were of children under 5 years of age and 10,371 (66.7 per cent.) were of persons aged 65 and upwards. There were 125 deaths of persons (40 males and 85 females) aged 95 and upwards and of this number there was one male at 100 years, one at 101, one at 105, one at 106 and five females aged 100 years, four at 101, two at 102, one at 104 and one at 105.

Table G gives a partial analysis of deaths by age for each sex and the percentage of the total deaths in each group.

TABLE G. Northern Ireland: Deaths by sex and certain age-groups and as percentage of total deaths, 1965.

		Total	Under 1 year	1-14 years	15-44 years	45-64 years	65 years and over

DIAGRAM 3. Death rates (standardised) in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1940-65
Rate per 1,000 population.

Deaths in hospitals The number of deaths occurring in hospitals in each of the years 1956–1965 is shown in Table J. Of the deaths registered in 1965, 53.8 per cent. took place in hospitals (4.1 per cent. in mental hospitals), and the remaining 46.2 per cent. occurred in the deceased person's own home, in private nursing homes, or in places other than hospitals. It will be seen from Table J that the proportion of deaths occurring in hospitals has been increasing steadily through the years, with the exception of the year 1963. The proportion of deaths occurring in institutions in 1935 amounted to 27.0 per cent. of the total deaths.

TABLE J. *Northern Ireland: Deaths in hospitals, 1956–1965.*

Cause of death Where more than one cause of death is reported the death is classified to the underlying cause, i.e., the starting point in the sequence of events leading to death. See General Notes on page 8.

Proportion of deaths from principal causes Abstract 19 sets out the causes of death as proportions per 1,000 of the total deaths in certain age-groups by sex. Heart disease continued to bear by far the greatest proportion of the total deaths; other diseases having a high proportion were cancer, vascular lesions affecting the central nervous system (mainly cerebral thrombosis and cerebral haemorrhage) and respiratory diseases.

At ages under one year, birth injuries and atelectasis, congenital malformations, premature birth, and pneumonia were the principal causes of death.

Between the ages of one and ten the highest proportions were caused by accidents, congenital malformations, pneumonia and malignant diseases.

Between the ages of ten and twenty-four, accidents caused by far the largest proportion of deaths. The proportion from malignant diseases was also high.

Between the ages of twenty-five and forty-four the sequence was heart diseases, malignant diseases, accidents and vascular lesions affecting the central nervous system. From age forty-five the pattern represented the overall mortality incidence viz., heart diseases followed by vascular lesions affecting the central nervous system, malignant diseases and respiratory diseases.

Table K shows, for each of the principal causes, the numbers of deaths and the death rates for each year since 1961.

Deaths from the principal epidemic diseases A total of 57 deaths (0.04 per 1,000 population) fell within this group. Of these, 29 were caused by influenza, 22 by diarrhoeal diseases of children under 2 years of age, 2 by whooping cough and 4 by measles. No deaths resulted from the other diseases comprising this group, viz., acute poliomyelitis, diphtheria, small-pox, typhus, typhoid fever, dysentery, scarlet fever and paratyphoid fever.

The number of deaths from the principal epidemic diseases in 1964 was 84 and the relative rate was 0.07. The difference is mainly accounted for by the lower incidence of deaths from influenza and diarrhoeal diseases in 1965.

TABLE K. Northern Ireland: Causes of death and death rates per 100,000 of estimated population, 1962-1965.

†See definition on page 8.

The notifications of certain infectious diseases for each administrative area in Northern Ireland for the year 1965 are shown in Abstract 32, and the diseases named are those laid down by regulations (issued by the Ministry of Health and Social Services) as compulsorily notifiable throughout Northern Ireland.

Influenza There were 29 deaths from influenza in 1965 as against a total of 51 in 1964. The relative rates per 1,000 of the population were 0.02 (1965) and 0.03 (1964).

Tuberculosis Deaths from this cause numbered 74 compared with 83 in 1964. The rate of 0.05 per 1,000 population is the lowest ever recorded in Northern Ireland. Further details of comparable figures over the past years may be seen at a glance in Tables L and L1.

The tuberculosis death rates for England and Wales (provisional), Scotland (provisional) and the Irish Republic in 1965 were 0.05, 0.1 and 0.1 respectively.

More detailed information about deaths from tuberculosis is given in Abstracts 11 and 14.

Cancer* The number of deaths from cancer in Northern Ireland during 1965 was 2,417 giving a death rate of 1.65 per 1,000 of the population which is 0.08 above the rate for 1964. From Diagram 4 and Table M below it can be seen that the general tendency has been for the rate to show a more or less steady increase.

The death rates from cancer and tuberculosis were roughly the same in 1931 (i.e. 1.26 for cancer and 1.23 for tuberculosis). Since then the cancer rate has increased by 31.0 per cent. and the tuberculosis rate has decreased by 95.9 per cent.

TABLE M. *Northern Ireland: Deaths and death rates from cancer, 1926, 1937, 1951 and 1958-1965.*

YEAR	MALES		FEMALES		TOTAL	
	Number of deaths	Rate per 1,000 of the estimated male population	Number of deaths	Rate per 1,000 of the estimated female population	Number of deaths	Rate per 1,000 of the estimated population

1959	1,185	1.73	1,073	1.49	2,258	1.60
1960	1,205	1.74	1,096	1.51	2,301	1.62
1961	1,138	1.64	1,048	1.43	2,186	1.53
1962	1,177	1.68	1,039	1.41	2,216	1.54
1963	1,180	1.67	1,072	1.45	2,252	1.56
1964	1,196	1.68	1,096	1.47	2,292	1.57
1965	1,249	1.74	1,168	1.55	2,417	1.65

As will be seen from Abstract 11 the most frequent sites of fatal cancer among males during the year were trachea, bronchus and lungs, 352; stomach, 191; prostate, 113; intestines, 121; rectum, 71 and pancreas, 71. Among females the most frequent sites were breast, 227; stomach, 151; intestines, 146; uterus, 88; rectum, 66 and trachea, bronchus and lungs, 62.

For many years cancer of the stomach proved to be the most frequent site of fatal cancer for both sexes and it remained so among females up to 1961 when it took second place to cancer of the breast. Since 1954 however, cancer of the lung has been more prevalent among males. The number of male deaths from this cause increased rapidly each year since 1945, with the exception of 1958, 1960, 1962 and 1964 in each of which years there was a slight decrease compared with the year immediately preceding.

Table M1 shows the numbers and rates of lung cancer deaths by sex for the past ten years. Abstract 11 gives particulars regarding the cancer sites by sex and age-groups and Abstracts 13, 14 and 21 give details of cancer incidence in administrative areas.

* See definition on page 8.

DIAGRAM 4. Death rates (crude) from cancer in Northern Ireland, England and Wales, Scotland and the Irish Republic. 1940-65. Rate per 100,000 population.

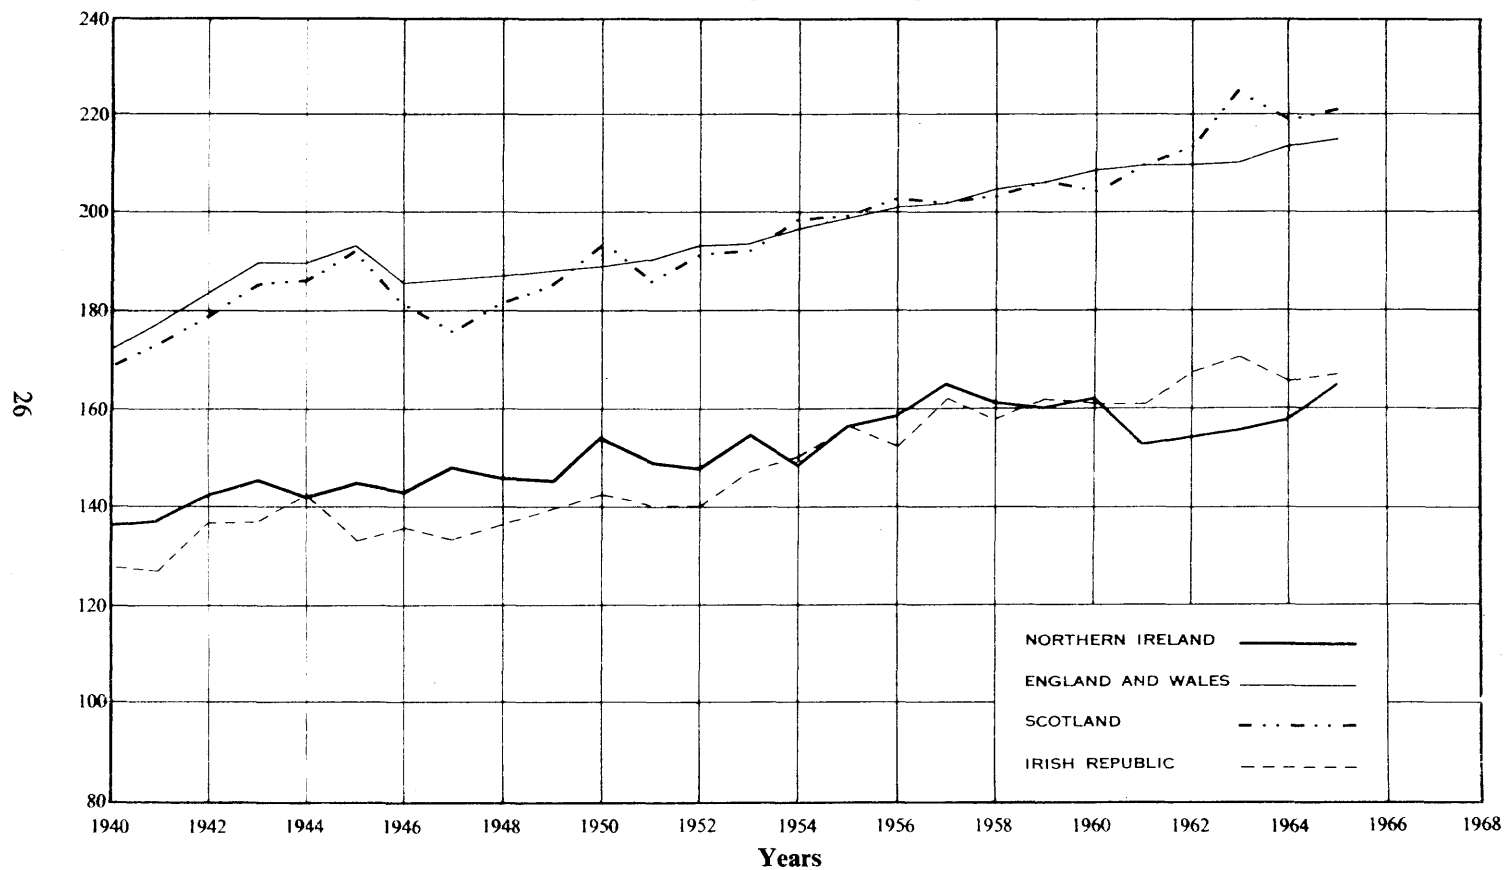

TABLE M1. Northern Ireland: Deaths and death rates from lung cancer, 1956-1965.

YEAR	Number			Rate per 100,000 population		
	Males	Females	Persons	Males	Females	Persons
1956	260	72	332	38	10	24
1957	268	45	313	39	6	22
1958	263	51	314	38	7	22

1963	354	60	414	50	8	29
1964	330	66	396	46	9	27
1965	352	62	414	49	8	28

Cerebral haemorrhage, apoplexy, etc. The deaths assigned to this group (described as "vascular lesions affecting central nervous system") numbered 2,276 giving a rate of 1.55 per 1,000 of the population. This rate is 0.03 more than that for 1964, and is 0.01 above the average rate for the period 1960-1964. The rate per 1,000 of the male population was 1.36 whilst the female rate was 1.73. Details of deaths in this group by ages are shown in Abstract 11.

Heart diseases The deaths from the various forms of heart disease during the year numbered 5,700, the rate per 1,000 of the population being 3.88, which is 0.07 above that for the previous year and is 0.15 below the average for the five years 1960-64.

Of the total number of deaths from heart diseases 81.7 per cent. were of persons who suffered from one or other of the diseases known collectively as "arteriosclerotic and degenerative heart disease". Deaths within this group numbered 4,659, arteriosclerotic heart disease including coronary disease accounting for 3,526 or 75.7 per cent. (coronary disease alone accounted for 3,343 or 71.8 per cent.), other myocardial degeneration for 1,058 or 22.7 per cent. and chronic endocarditis not specified as rheumatic for 75 or 1.6 per cent. Deaths resulting from heart disease specified as involving the coronary arteries formed 25.8 per cent. of all male deaths and 16.7 per cent. of all female deaths. Of every 100 men who died from coronary artery disease 40 were under 65 years of age compared with 41 for 1964.

TABLE N1. *Northern Ireland: Deaths and death rates per 1,000 population from arteriosclerotic heart disease, including coronary disease (420.0, .1, .2), and heart disease specified as involving coronary arteries (420.1), 1958-1965.*

1963	3.08	2.95	1.77	1.63	2.40	2.27
1964	2.92	2.79	1.70	1.58	2.29	2.17
1965	3.07	2.96	1.76	1.63	2.40	2.28

Bronchitis The deaths from bronchitis during the year numbered 756, giving a rate of 0.51 per 1,000 of the population, which is 0.05 above the rate for 1964. Bronchitis was also an important contributory factor in 396 deaths though not related to the condition taken to have initiated the sequence of events leading to death.

Pneumonia It should be noted that in the various tables and abstracts deaths from pneumonia are included under two headings. Unless otherwise indicated the general heading "pneumonia" refers to deaths of all persons aged four weeks or over, and the heading "infections of the new-born" includes deaths from pneumonia of children under four weeks old.

Total deaths from pneumonia (under both headings) numbered 774 during the year 1965, the rate of 0.53 per 1,000 of the population being the same as the rates for 1963 and 1964. The average rate for the five preceding years including 1964 was 0.50.

Pregnancy and childbirth The mortality of women during pregnancy and childbirth is classified under two headings, namely—(1) deliveries and complications of pregnancy, childbirth and the puerperium and (2) deaths with mention of pregnancy or childbirth but not classified as maternal. The causes of death shown in Table O are those to which the various deaths were assigned, a total of 11 to the former group and 12 to the latter.

From Table O1 it will be seen that the 11 deaths from diseases of pregnancy, childbirth and the puerperal state in 1965 yielded a rate of 0.32 per 1,000 births (live and still), which is 0.15 above the rate for 1964 which was the lowest rate ever recorded.

The 12 deaths shown in the bottom half of Table O gave a rate of 0.35 per 1,000 births (live and still) compared with 0.14 in the previous year. It should be noted that there is no connection in these cases between the underlying causes shown and the maternal condition coincidentally present.

TABLE O. Northern Ireland: Maternal deaths and deaths in which maternal conditions were coincidentally present, 1965.

Detailed List Numbers	CAUSES OF DEATH	All Ages	Ages							
			15-	20-	25-	30-	35-	40-	45 and upwards

Infant mortality Deaths of infants under 1 year of age numbered 849, or 25 per 1,000 live births registered. This rate is one less than that for the previous year. Of the 849 deaths, 480 were of males and 369 of females, the former number being equivalent to 27 per 1,000 live births of males and the latter to 23 per 1,000 live births of females. The corresponding rates for 1964 were 31 and 22 respectively. In 1965 the infant mortality rate in England and Wales was 19, in Scotland 23 and in the Irish Republic 25. Comparative figures for previous years are shown in Table B on page 11.

DIAGRAM 6. Infant mortality rates (crude) in Northern Ireland, England and Wales, Scotland and the Irish Republic, 1940-65. Rate per 1,000 live births.

Neonatal mortality Deaths of infants aged under four weeks numbered 602, representing a rate of 18 per 1,000 live births, This is equivalent to 70.9 per cent. of all deaths of children under 1 year of age. The corresponding figures for 1964 were 629, 18 and 69.6 per cent. respectively. The 1965 rates for England and Wales, Scotland and the Irish Republic were 13, 16 and 17 respectively.

TABLE P. Northern Ireland: Neonatal and infant mortality rates per 1,000 live births by counties, 1962-1965.

COUNTIES	Neonatal mortality rate per 1,000 live births				Infant mortality rate per 1,000 live births

Abstract 25 gives the number of deaths of children under 1 year of age for Northern Ireland by counties and county boroughs (also for the aggregates of the urban and rural areas) for the years 1962–1965. For the last of these years the numbers are given by sex and age-groups.

Abstract 14 gives the number of infant deaths, together with the number of births, for each administrative area in Northern Ireland.

The numbers of infant deaths for 1965 by age and cause of death are given in Abstract 23, together with the infant mortality rates by causes.

Mortality among illegitimate children Deaths of illegitimate children under 1 year of age numbered 26 in 1965, which is equivalent to a rate of 26 per 1,000 of the illegitimate live births registered as compared with a rate of 31 for the previous year. The corresponding rates were 25 and 26 per 1,000 legitimate live births respectively for legitimate children in 1965 and 1964.

TABLE R. *Northern Ireland: Illegitimate neonatal and infant mortality rates per 1,000 illegitimate live births by counties, 1962–1965.*

COUNTIES	Illegitimate neonatal mortality rate per 1,000 illegitimate live births				Illegitimate infant mortality rate per 1,000 illegitimate live births

Deaths of illegitimate infants aged under four weeks (illegitimate neonatal mortality) numbered 20, representing 76.9 per cent. of the total deaths of all illegitimate children under 1 year of age. The corresponding figures for 1964 were 21 and 67.7 per cent. respectively.

Abstract 23 gives the number of deaths and mortality rates of illegitimate children under 1 year of age by causes. Most of the rates are considerably in excess of the corresponding rates for all children, but it should be noted that many of the rates relating to the illegitimate live births are based on very small numbers of deaths.

Abstract 26 shows the numbers of deaths of illegitimate children under 1 year of age for Northern Ireland by counties and county boroughs, also for the aggregates of the urban and rural areas, for the years 1962–1965. The sex and age distribution is shown for the year 1965.

Violent deaths Deaths from causes other than natural causes are termed violent deaths and are classified according to both the external circumstances giving rise to injury, expressed as the "external cause of injury" (see Table S), and to the nature of the injury sustained, designated as the "nature of injury" (see Table S2).

The number of deaths ascribed to violence during the year was 593 (371 males and 222 females) which is 8 less than the number registered in 1964, and is equivalent to 3.8 per cent. of the total deaths registered.

TABLE S. Northern Ireland: Violent deaths by external cause of injury, 1962-1965.

CAUSES OF DEATH (with detailed list nos.)	1962	1963	1964	1965		
				Persons	Males	Females
<i>Accidental Causes:</i>						
Drowning (E850, 851 and 929)	48	30	20	29	26	3

<i>Operations of war (E965, 990-999)</i>	2	3	3	1	1	.
TOTAL DEATHS FROM VIOLENCE	576	605	601	593	371	222

Of the 593 deaths, 213 were attributed to transport accidents (E800—E866) (excluding drowning from watercraft (E850, E851)). Road vehicle accidents (E810—E845) accounted for 211 deaths as compared with 232 in 1964. Table S1 affords comparison of numbers of deaths from road vehicle accidents in 1965 with those for the three preceding years by sex and certain age-periods.

TABLE S1. Northern Ireland: Deaths from road vehicle accidents (E810—845), 1962-1965.

	All ages	Under 5 years	5-14	15-34	35-54	55-74	75 and over
MALES							
1962	107	3	7	38	22	24	13
1963	138	8	15	45	22	34	14
1964	152	7	14	51	28	39	13
1965	156	10	8	51	39	38	10
FEMALES							
1962	48	9	6	6	7	15	5
1963	51	3	6	11	7	16	8
1964	80	5	11	10	12	27	15
1965	55	8	10	9	6	17	5

Other fatal accidents accounted for 308 deaths and of these deaths 163 were ascribed to falls, 29 to drowning, 49 to poisons or poisonous gases, 22 to fire and heat, 6 to mechanical suffocation, 6 to machinery and 33 to other accidental causes. A detailed break-down showing non-transport accidents by sex and age-group is given in Abstract 12.

Deaths from accidents recorded as occurring in the home numbered 172 compared with 157 in 1964 and 153 in 1963. Most accidents in the home are occasioned by falls and it should be noted that in 1965 there were only 20 deaths from falls where the place of the accident was unspecified compared with 32 such deaths in 1964. Fuller details of these and other accidents (apart from transport accidents) are given in Abstract 12.

During the year there were 70 cases of suicide (42 males and 28 females) compared with 79 (49 males and 30 females) in 1964, 1 death from late effects of injuries due to war operations and 1 death due to late effects of a motor vehicle accident.

TABLE S2. Northern Ireland: Violent deaths by nature of injury, 1962-1965.

INJURIES SUSTAINED (with detailed list nos.)	1962	1963	1964	1965		
				Persons	Males	Females

TOTAL DEATHS	576	621	616	615	386	229

Deaths in which violence was stated to be the sequel to some other cause are correlated in Table S3. Alcoholism was, as usual, the greatest single factor in this group causing the deaths of 11 people. This figure, however, does not include deaths caused by other people who were in a state of intoxication but who were not themselves killed.

TABLE S3. Northern Ireland: Deaths in which violence was a terminal cause, 1965.

Detailed list numbers	UNDERLYING CAUSE OF DEATH	TOTAL	M												
			15	4	5	3	1	1	2	1	1	1	2		
	TOTAL	158	4	5	3	1	1	2	1	1	2	1	1	1	2
304	Senile psychosis	M	1

420.1	Coronary artery disease	M	2	1											
434.4	Other heart disease	M	1												
444	Essential benign hypertension	M	1												
E921	Inhalation and ingestion of food causing obstruction or suffocation	M	1												

CERTIFICATION OF DEATHS

All deaths must be certified by either a medical practitioner or a coroner and Table T shows the deaths by certification during the year. The circumstances of 1,865 deaths (12.0 per cent. of all deaths) were considered by the coroners and in 548 of these cases an inquest was held. In 772 cases the deaths were certified by coroners after a post-mortem examination had proved an inquest to be unnecessary.

TABLE T. Northern Ireland: Deaths by certification, 1965.

COUNTIES	Total deaths	Certified by medical practitioners	Certified by coroners		
			Without inquest		After inquest
			Without post-mortem	After post-mortem	
Northern Ireland	15,551	13,686	545	772	548
All urban areas	8,588	7,507	305	487	289
All rural areas	6,963	6,179	240	285	259
Belfast County Borough	4,745	4,067	153	359	166
Londonderry County Borough	612	556	25	12	19
County Antrim	2,825	2,485	93	125	122
County Armagh	1,270	1,163	32	40	35
County Down	3,017	2,621	137	146	113
County Fermanagh	550	490	15	26	19
*County Londonderry	1,093	1,002	40	21	30
County Tyrone	1,439	1,302	50	43	44

*Excluding County Borough.

Of the 13,686 deaths registered by medical certification the deceased was not seen after death by a medical practitioner in 4,578 cases.

LIFE TABLE

The expectation of life is the average number of years which would be lived by a group of people of given age who are continuously subject to given mortality rates, usually those of a selected year or years.

The abridged life table shown as Table U is based on the mortality rates for 1963-65 and shows the expectation of life at various age-points together with the number of persons who would survive to given age x out of 10,000 born, if subjected throughout their lives to this mortality experience.

Thus 97 per cent. of males and 98 per cent. of females would survive the first year of life; 96 per cent. of males and 97 per cent. of females would reach the age of 20; 78 per cent. of males and 85 per cent. of females would reach the age of 60 and the men could then expect an average future lifetime of 15 years compared with 19 years for women.

Based on the mortality experience of 1963-65 the expectation of life at birth was 67.8 years for males and 72.9 years for females; at age one year the expectations were 68.8 years for males and 73.6 years for females. Table U1 affords comparison of these figures with those for certain preceding years.

TABLE U. Northern Ireland: Abridged Life Table, 1963-1965.

<i>Age x</i>	Males		Females	
	l_x	$^{\circ}e_x$	l_x	$^{\circ}e_x$
0	10,000	67.84	10,000	72.89
1	9,712	68.84	9,766	73.63
2	9,697	67.95	9,753	72.73
3	9,691	66.99	9,745	71.79
4	9,684	66.04	9,741	70.82
5	9,678	65.08	9,737	69.85
10	9,655	60.23	9,721	64.96
15	9,636	55.34	9,709	60.04
20	9,602	50.53	9,697	55.11
25	9,558	45.75	9,677	50.22
30	9,510	40.97	9,649	45.35
35	9,449	36.22	9,604	40.55

70	5,449	9.60	7,038	11.34
75	3,930	7.35	5,618	8.58
80	2,422	5.37	3,923	6.21
85	1,083	3.92	2,113	4.38

This abridged life table is constructed from the estimated populations and the total deaths registered during the years 1963-1965.

The column headed l_x shows the numbers who would survive to exact age x out of 10,000 born who were subject throughout their lives to the death probabilities indicated by the mortality records for the years 1963-1965.

Column $^{\circ}e_x$ gives the "expectation of life"—that is the average future lifetime which would be lived by a person aged exactly x if subject to those death probabilities.

TABLE U1. Northern Ireland: Expectation of life at birth, at one year of age and at 65 years of age for certain periods between 1890 and 1965.

Period	Expectation of life					
	At birth		At age one year		At age 65 years	
	Male	Female	Male	Female	Male	Female
1890-92	46.3	45.7	—	—	10.6	10.6
1900-02	47.1	46.7	—	—	10.5	10.4
1910-12	50.7	51.0	—	—	12.1	12.8
1925-27	55.4	56.1	59.9	59.5	11.9	12.7
1936-38	57.8	59.2	—	—	11.6	12.4
1950-52	65.5	68.8	67.5	70.3	12.1	13.5
1954-56	67.4	71.1	68.7	72.1	12.3	14.0
1956-58	67.6	71.8	68.7	72.7	12.2	14.2
1958-60	67.5	71.9	68.6	72.8	12.1	14.2
1959-61	67.4	72.1	68.5	72.9	12.1	14.2
1960-62	67.6	72.4	68.7	73.2	12.2	14.4
1961-63	67.6	72.5	68.7	73.3	12.2	14.5
1962-64	67.9	72.8	68.9	73.6	12.3	14.7
1963-65	67.8	72.9	68.8	73.6	12.2	14.8

The Life Tables for 1901, 1926, 1951 and 1961 are included in Section 3 of the Ulster Year Book, 1963-1965, obtainable from H.M. Stationery Office (price 10s. 0d.).

CONGENITAL MALFORMATIONS

This section which appeared in the Report for the first time in 1964, relates to children born (live or still) with any apparent deformity. The information about these congenital malformations is furnished to the General Register Office by the county and county borough health committees and is classified according to the residence of the parents and not to the place of occurrence.

During the year 908 children were born with congenital malformations compared with 877 in 1964. As will be seen from Table V County Armagh had the highest proportion of such births and County Londonderry (excluding the County Borough) the lowest. This was the position in 1964 also. The Northern Ireland rate has increased despite a fall in the number of total births registered.

TABLE V. Northern Ireland: Number of congenitally malformed children in counties by month of birth, 1965.

COUNTIES	MONTH OF BIRTH												Totals	Rate*
	January	February	March	April	May	June	July	August	September	October	November	December		
Northern Ireland	69	65	89	66	79	79	80	81	73	75	62	90	908	26.3
Belfast County Borough	15	17	27	14	19	25	16	24	24	23	21	21	246	28.6
Londonderry County Borough	5	1	1	4	6	1	5	4	4	6	1	5	43	25.0
County Antrim	13	12	18	13	19	17	14	16	11	13	11	16	173	22.8
County Armagh	9	5	10	11	9	7	17	10	10	11	5	9	113	36.4
County Down	19	16	17	16	20	18	17	17	13	10	12	23	198	33.4
County Fermanagh	1	3	4	2	2	.	.	1	.	.	1	3	17	15.8
County Londonderry†	1	7	5	3	1	4	1	4	4	5	4	8	47	15.0
County Tyrone	6	4	7	3	3	7	10	5	7	7	7	5	71	20.8

*Per 1,000 births (live and still).

†Excluding County Borough.

Of the 908 children born with malformations 174 (19 per cent.) were born with more than one abnormality. In all, 1,146 separate abnormalities were recorded. Table VI shows the number of children affected by multiple abnormalities in each county.

TABLE VI. *Northern Ireland: Multiple abnormalities by counties, 1965.*

COUNTIES	NUMBER OF ABNORMALITIES											
	1		2		3		4		5		All	
	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.	Children	Abnorms.
Belfast County Borough	190	190	41	82	11	33	4	16	.	.	246	321
Londonderry County Borough	34	34	6	12	3	9	43	55

Northern Ireland	734	734	124	248	36	108	14	56	.	.	908	1,146

*Excluding County Borough.

In Northern Ireland as a whole 37 per cent. of the cases were reported by medical practitioners, the remaining 63 per cent. being reported by midwives or other persons with nursing qualifications. In County Antrim, however, 99.4 per cent. of the notifications were received from medical practitioners.

TABLE V2. *Northern Ireland: Number of congenitally malformed children by status of informant showing county of residence of parents, 1965.*

STATUS OF INFORMANT	COUNTY BOROUGHS		COUNTIES						Totals
	Belfast	Londonderry	Antrim	Armagh	Down	Fermanagh	Londonderry*	Tyrone	
Doctors	75	26	172	34	.	15	8	2	332
Mid-wives, and other informants with nursing qualifications	171	17	1	79	198	2	39	69	576
Others
TOTALS	246	43	173	113	198	17	47	71	908

*Excluding County Borough.

Details about the nature of the malformations will be found in Abstracts 27, 28, 30 and 31 and data about the mother's age and the number of other children born to her are in Abstract 29.

MIGRATION

The population figures ascertained at each census enable the net migration during the inter-censal periods to be calculated. Table W shows that during the period of approximately ten years between the censuses taken on the 8th April, 1951 and the 23rd April, 1961 there was a net outward movement of 92,228 persons to all countries including other parts of the British Isles.

TABLE W. *Northern Ireland: Net migration during inter-censal period 1951-1961.*

	Males	Females	Total
Population, Census of 1951	667,819	703,102	1,370,921
Births, 1951-1961	154,278	144,530	298,808
Deaths, 1951-1961	78,764	73,695	152,459
Natural increase*	75,514	70,835	146,349
Population 1951 plus natural increase	743,333	773,937	1,517,270
Population, Census of 1961	694,224	730,818	1,425,042
Net movement outwards	49,109	43,119	92,228

* The excess of births over deaths.

Table W1 shows the natural increase in the population for each inter-censal period since birth and death registration commenced in 1864, together with the net movement outwards and the percentage of the increase lost by migration.

TABLE W1. *Northern Ireland: Inter-censal variations in population, 1871-1961.*

Inter-censal period	Population at beginning of period	Natural increase*	Net movement outwards	Percentage of increase lost by migration
1871-1881	1,359,190	104,350	158,724	152
1881-1891	1,304,816	71,910	140,670	196
1891-1901	1,236,056	68,634	67,738	99
1901-1911	1,236,952	78,996	65,417	83
1911-1926	1,250,531	113,603	107,573†	95
1926-1937	1,256,561	80,835	57,651	71
1937-1951	1,279,745	158,443	67,267†	42
1951-1961	1,370,921	146,349	92,228	63

* Excess of births over deaths.

† Including deaths in H.M. Forces and Mercantile Marine which occurred outside Northern Ireland.

It is estimated that during the year ended 30th June, 1965 the net outward migration amounted to 7,906 persons which represents 41.8 per cent. of the natural increase (18,906) during that period.

METEOROLOGY

The following report on the weather experienced in Northern Ireland during 1965 is furnished by the Director-General of the Meteorological Office through his Climatological Services and Meteorological Public Records Office in Belfast. Where the term "average" is used it refers to the standard 35 year period, 1916-1950, for rainfall and to the standard 30 year period, 1931-60, in respect of temperature and sunshine.

The mean temperature over the year as a whole was 0.8°C below average: a colder than average year in all months save May and October when the mean temperature was slightly above average.

The sunshine of the year as a whole was below average mainly as the result of the sub-normal sunshine of the summer half-year, April to October, during each month of which sunshine was below average. It was also below average in February.

Rainfall for the year, over Northern Ireland as a whole, was slightly above average (104 per cent.). February was unusually dry (17 per cent.) with July and October rainfall below average (80 and 77 per cent. respectively). Other months' rainfall was above average notably March (141 per cent.), June (140 per cent.) and December (127 per cent.).

Table X on pages 44 and 45 gives data in respect of certain stations and the general values for Northern Ireland as a whole. Columns 2 and 3 give the highest and lowest air temperatures recorded on any date during the appropriate month, whilst columns 4 and 5 give the mean of the daily maxima and minima. Information relating to Northern Ireland as a whole is based upon a selection of representative stations appropriate to the meteorological element and not necessarily those for which data are published on the preceding pages. This information smooths out variations experienced by various parts of the Province and therefore presents a generalised overall picture. The "highest" and "lowest" temperatures, however, refer to values received from around fifty temperature recording stations in the Province, and are not restricted to the seven stations shown. Temperature data are given in the Centigrade scale: to convert "actual values" to Fahrenheit multiply the Centigrade value by 9, divide the resultant by 5, then add 32.0 . To convert "difference from average temperature" in the Centigrade scale to Fahrenheit, $1.0^{\circ}\text{C}=1.8^{\circ}\text{F}$.

A brief summary of general conditions each month is given below; more detailed statements appear in the Quarterly Returns:—

January: A cold month with temperatures generally $1-2^{\circ}$ below average except during the period 5-13th and on a few other occasions. Rainfall varied from about 150 per cent. of average in the south-west to around average in the north-east. Sunshine was above average. Wintry precipitation, mainly light, occurred on about 10 occasions.

February: A cold dry month with temperatures generally $1-2^{\circ}$ below average. Rainfall in the wettest areas—Co. Londonderry, mid-Antrim and parts of Co. Down—was around 25 per cent. of average. Snow fell on the 28th—the heaviest falls being in south Down.

March: A cold month with temperatures around 1° below average. Sunshine was around average. Rainfall was above average except in places along the north coast and in the Ballymena area. Snow fell on the first few days of the month and on a few other occasions—the heaviest falls being in south Down and north Antrim.

April: Temperatures were generally around average, though a little below average in south Antrim and north Down. Rainfall was variable being generally around average except in Co. Fermanagh where it was 145-175 per cent. of average. Sunshine was generally around average.

May: A dull month with sunshine well below average. Temperatures were around average. Rainfall was very variable; ranging from around 60-75 per cent. of average in Co. Antrim (except the extreme south) to 175-200 per cent. of average in the Enniskillen area.

June: A wet month with rainfall ranging from 112-130 per cent. of average in south Armagh and Co. Down to around 200 per cent. of average in Co. Fermanagh. Sunshine was 70-75 per cent. of average in the east and 90-95 per cent. of average in the west. Temperatures were a little below average in the west and north-west and a little above average in Cos. Armagh and Down.

July: A cold month with temperatures 1-2° below average on most days and nights. Rainfall was around 75 per cent. of average in most places, though in parts of Cos. Antrim and Fermanagh it was 100 per cent. of average. The driest area was Ballykelly with 47 per cent. of average. Sunshine was below average except in parts of north Armagh, Co. Antrim and Co. Down.

August: A cold month with temperatures generally below average except for a spell between the 9th and 18th. Sunshine was below average except in the Ards Peninsula. Rainfall was variable being generally 100-110 per cent. of average except in some inland districts of Cos. Down, Londonderry and Antrim where it was around 80 per cent. of average.

September: A cold month with temperatures generally 1-2° below average. Sunshine was below average. Rainfall was variable being generally around average in Co. Down and south Antrim and 140-150 per cent. of average in parts of north-west Tyrone and Co. Londonderry.

October: A dry month with rainfall generally below average and temperatures 0.5-1.0° above average. Sunshine was below average except in north-west Londonderry and south Armagh where it was 115-120 per cent. of average.

November: A cold month with temperatures about 2° below average. Rainfall varied from a little below average in the west to around 175 per cent. of average in south Armagh. Snow, hail or rain and snow fell on many occasions between the 16th and 30th. Sunshine was generally above average.

December: A cold month with temperatures generally 0.5-1.0° below average and 1.0-1.5° below average in parts of Co. Fermanagh. Rainfall was above average ranging from 104-112 per cent. of average in the north to 140-160 per cent. of average in the south. Snow, mainly light on low ground, fell chiefly between the 26th and 28th. Sunshine was above average.

TABLE X. Northern Ireland: Air temperature, rainfall and sunshine recorded at seven stations during the year, 1965.

ADMINISTRATION

Introductory The administrative functions of the office of the Registrar General comprise the registration of births, deaths, marriages and adoptions, and the provision or supervision of machinery for dealing with preliminaries to marriages other than those according to the rites of the Roman Catholic Church.

Buildings licensed or registered for marriages The numbers of places of worship (other than those belonging to the Roman Catholic Church) in which marriages could be solemnised, as at 31st December in each of the years 1962, 1963, 1964 and 1965 were as follows:

<i>Denomination</i>	<i>1962</i>	<i>1963</i>	<i>1964</i>	<i>1965</i>
Church of Ireland	407	410	413	414
Presbyterian	508	510	509	512
Methodist	160	160	159	159
Others	260	263	263	269
TOTAL	1,335	1,343	1,344	1,354

State of registration The measures adopted for particulars of births notified under the Notification of Births Act, 1907, to be furnished to registrars in the two county boroughs have continued to be of value in securing the registration of a number of births which had not been registered within the prescribed period of 6 weeks.

Births and deaths not registered within a year of their occurrence can be recorded only with the authority of the Registrar General. During 1965 such authority was granted for the registration of 39 births, as compared with 38 in 1964 and 30 in 1963. The registration of 12 deaths was authorised as compared with 18 in 1964 and 22 in 1963.

Legitimacy Acts (N.I.), 1928 to 1961 Under these Acts an illegitimate child whose parents have married is, subject to certain conditions, legitimated, and the Registrar General is empowered to authorise the re-registration of the birth. During 1965 the re-registration of the births of 143 children was authorised under these Acts, the comparative figures for 1964 and 1963 being 153 and 110 respectively.

Adoption of Children Act (N.I.), 1950 Registers of children adopted under the provisions of the above Act and of the previous Adoption Act of 1929 are kept in the General Register Office, to which the adoption orders made by the Courts are transmitted. A certified copy of an entry in the Adopted Children Register is evidence of adoption, and is also evidence of the date of birth of the adopted child. The children whose adoptions were recorded in the Adopted Children Registers during 1965 numbered 437 whilst the figures for 1964 and 1963 were 400 and 342 respectively.

Searches and certificates The original records of live births, deaths, and marriages registered in Northern Ireland are, in general, in the custody of local registration officers, who issue annually therefrom many thousands of certificates. An indication of the extent to which Government Departments and the public have utilised the facilities for searching in the indexes and obtaining certificates from records in the General Register Office for

Northern Ireland (including the Adopted Children Register) is afforded by the following statement:

YEAR	OFFICIAL		PAID			
	Searches	Certificates	Searches	Certificates		Fees Received
				Full	Short	
1927	56	29	109	112	—	£ 19 s. 9 d. 0

1965	498	493	3,198	3,682	2,663	1,017 7 0

*Fees for certificates and searches were increased with effect from the 21st April, 1956.

Verifications Requests for the verification of particulars of events registered are received from Government Departments in connection with claims for pensions, etc. During the year the number of cases dealt with was 11,788 out of which 5,083 were checked from the records in this office and 6,019 events (where records were not available at headquarters) were referred to local registration officers.

*Abstracts
of Marriages, Births and Deaths
Registered in Northern Ireland
during the year 1965*
