Northern Ireland Quarterly Construction Bulletin Quarter 4 2017

Key points

This statistical bulletin provides users with the latest estimates of construction output carried out in Northern Ireland for Q4 2017. It excludes work carried out by Northern Ireland Construction firms in other parts of the UK or elsewhere.

- The total volume of construction output in the fourth quarter of 2017 increased by 1.8% compared with Q3 2017 and was 3.6% higher compared to the same quarter in 2016 (Figure 1). There continues to be a general upward trend in output since 2014. The volume reported in Q4 2017 was the highest level reported in the last seven years.
- The increase in the overall output in Q4 2017 was accounted for by a 2.6% increase in New Work and a 1.4% increase in Repair and Maintenance.
- In Q4 2017, there was an increase in Other Work (4.1%). Housing output stayed at the same level while Infrastructure output decreased by 5.5%.

National Statistics

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value.

All official statistics should comply with all aspects of the Code of Practice for Official Statistics. They are awarded National Statistics status following an assessment by the Authority's regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate.

It is NISRA's responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Authority promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.

Publication Schedule

Quarter	Publication Date
2018 Quarter 1	19 July 2018
2018 Quarter 2	11 October 2018
2018 Quarter 3	17 January 2019
2018 Quarter 4	11 April 2019

1 Introduction

The Construction Output Statistics published in the Northern Ireland Construction Bulletin are intended to provide a general measure of quarterly changes in the volume and value of construction output in Northern Ireland. These figures are produced from the Northern Ireland Quarterly Construction Enquiry (QCE) which is a statutory survey of construction firms operating in Northern Ireland. Each quarter a sample of approximately 700 construction firms are asked to provide details of the value of construction activity they have undertaken in a specified period. The survey also covers public sector organisations (e.g. Roads Service) undertaking their own construction activity.

The Construction Output estimates are published as chained volume measures. Chained volume measures show volume trends in construction output over time by removing inflationary price effects.

Main uses of Construction Output Statistics

The Construction Output statistics are used by National Accounts in the calculation of the output measure of UK Gross Domestic Product. The results are used by Northern Ireland Government Departments, Economists, Construction Industry Analysts and Academics to understand the state of the construction sector and the broader economy in Northern Ireland. A summary of the main usage of Northern Ireland Construction Output Statistics is available at:

https://www.nisra.gov.uk/sites/nisra.gov.uk/files/publications/Summary%20of%20Usage.pdf

2 Context

The latest regional 2015 Gross Value Added (GVA) data for Northern Ireland indicates that the construction industry was estimated to account for 6% of regional Gross Value Added (GVA). Consequently, the construction industry is considered to be an important element of the Northern Ireland economy and this explains why there is so much interest in the construction output statistics. The latest regional GVA data for Northern Ireland is available at:

http://www.ons.gov.uk/economy/grossvalueaddedgva

Other Key Economic Indicators and the Wider Economy

The Construction Output Statistics are one of a number of economic indicators which provide an overview of the Northern Ireland Economy. Information on other key Northern Ireland economic indicators can be found below. Together they provide users with a comprehensive account of how the Northern Ireland Economy is performing across a range of indicators. Figures on the Northern Ireland Labour Market are published monthly and the latest Northern Ireland Labour Market Report is available at:

https://www.nisra.gov.uk/statistics/nisra-economic-and-labour-market-statistics-elms/economic-overview

Other key economic indicators measuring the performance of the Northern Ireland economy exist for the Production and Service sectors. The Index of Production (IoP) and the Index of Services (IoS) are derived from separate surveys of businesses in the production and service sectors. The Index of Production and the Index of Services are published quarterly. More information about the Index of Production and the Index of Services, and the latest results for both surveys is available at:

https://www.nisra.gov.uk/statistics/economy/economic-output-statistics

The Northern Ireland Economic Composite Index (NICEI) has been developed using data from existing quarterly indices of output from the Production, Services and Construction sectors. These sources have been combined (on the basis of industry share of Gross Value Added) with Agricultural output data and employee jobs data for the public sector to provide a seasonally adjusted and deflated measure of change in economic activity. The latest Statistical Bulletin, Press Release and Methodology Paper can be accessed at the following link:

https://www.nisra.gov.uk/statistics/economic-output-statistics/ni-composite-economic-index

The Department of Economy also produces an Economic Commentary which provides an overview of the state of the Northern Ireland economy, setting it in context with the UK and the Republic of Ireland. The latest Economic Commentary is available at:

https://www.economy-ni.gov.uk/publications/dfe-economic-commentary

Other Information

Additional information relating to the construction sector in Northern Ireland can be found at the following link:

https://www.nisra.gov.uk/sites/nisra.gov.uk/files/publications/2017q4soti.pdf

This includes provision of information related to the following:

- Type of construction firms operating in Northern Ireland;
- Number of people employed in the construction industry in Northern Ireland;
- Average earnings in the construction industry in Northern Ireland; and
- Reported accidents in the construction industry in Northern Ireland.

Additional Background Notes for this publication, including definitions, the methodology used, revisions to previous published data and information on data quality, can be accessed at the following link:

https://www.nisra.gov.uk/sites/nisra.gov.uk/files/publications/2017g4bkgi.pdf

Similar statistics on Construction Output for Great Britain are published by the Office for National Statistics at:

http://www.ons.gov.uk/atoz?query=output+in+the+construction+industry

3 Construction Output Summary

Quarter 4 (October to December) 2017

Overall Output

The total volume of construction output in the fourth quarter of 2017 increased by 1.8% compared with Q3 2017 and was 3.6% higher compared to the same quarter in 2016 (Figure 1). The total volume of work in Q4 2017 has continued the general upward trend seen since 2014. The volume reported in Q4 2017 was the highest level reported in the last seven years.

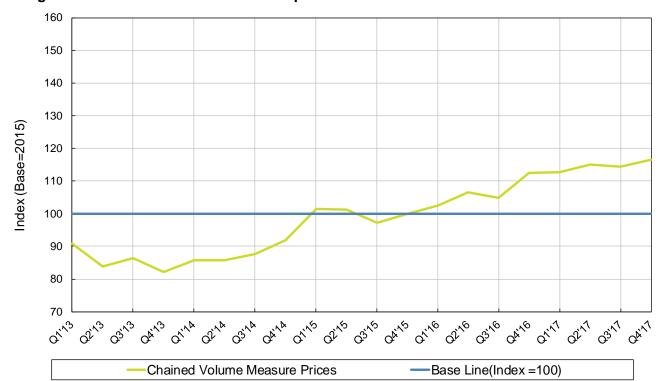

Figure 1: Volume of Construction Output in NI

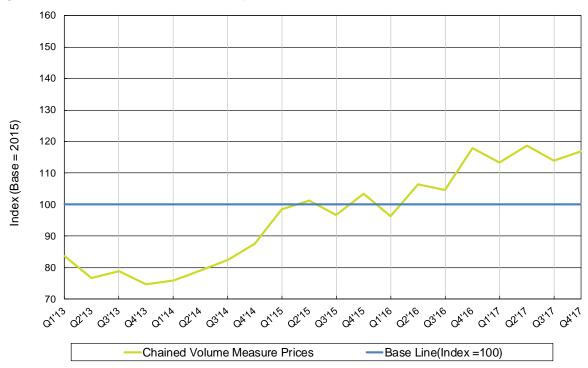

Construction Output - New Work and Repair & Maintenance

In Q4 2017, New Work accounted for almost two thirds of all construction output whilst Repair & Maintenance (R&M) accounted for more than one third of all construction output. New Work, historically in Northern Ireland, has been the largest sub-component of Overall Construction Output.

New Work

In the fourth quarter of 2017, the volume of New Work increased by 2.6% compared to the previous quarter but was 0.7% lower than the same quarter in 2016. Despite some variability in the volume of New Work series since 2015, the overall trend in New Work Output has generally been increasing over the last four years (Figure 2).

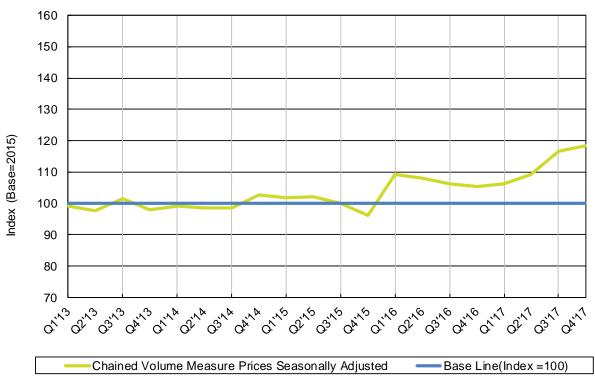

Figure 2: Volume of New Work Output in NI

Repair and Maintenance

In Q4 2017, Repair and Maintenance Output increased by 1.4% compared to the previous quarter and was 12.5% higher than the same quarter in 2016 (Figure 3). The overall trend in Repair and Maintenance Output was quite consistent until Q1 2016, from which point there has been an improvement in this subcomponent of construction output.

Figure 3: Volume of Repair and Maintenance Output in NI

Construction Output – Housing, Infrastructure and Other Work

In Quarter 4 2017, the largest sub-sector was Other Work which accounted for 42% of all construction output followed by Housing (37%) and then Infrastructure (22%). Figure 4 shows that Other Work continues to be the largest sub-sector of Construction Output and has been overtaking Housing since Q2 2013.

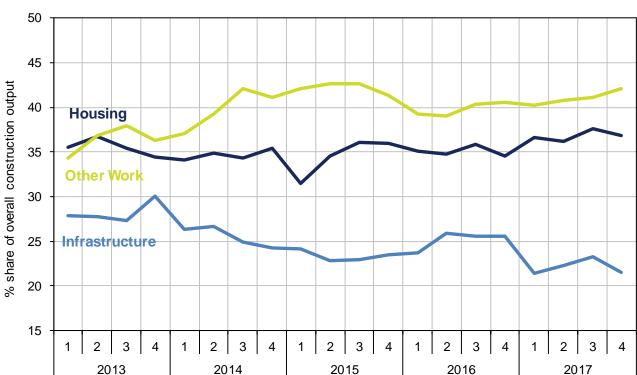

Figure 4: Overall Construction¹ Output broken down into Housing, Infrastructure² and Other Work²

Housing Output

The volume of Housing Output in the fourth quarter of 2017 decreased slightly by 0.1% compared to the previous quarter but was 10.8% higher compared with the same quarter in 2016 (Figure 5). Housing Output appears to be steadily improving over time although it remains well below historical levels.

¹ Percentages do not always tally to 100 as each category is individually deflated and seasonally adjusted

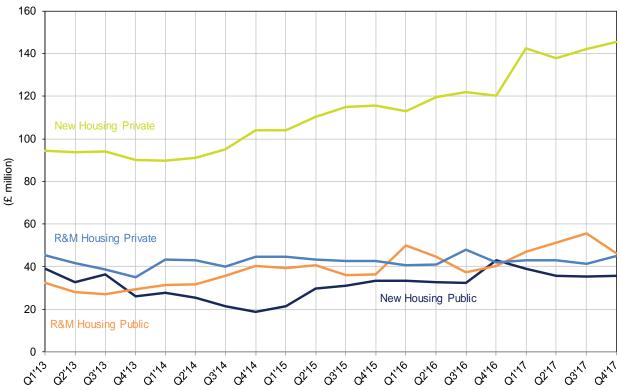

² Infrastructure and Other Work are not seasonally adjusted

Figure 5: Volume of Housing Output in NI

Figure 6 shows that in Q4 2017 there were increases in output levels in New Private Housing and R&M Private Housing, compared to the previous quarter. R&M Public Housing was the only sub-sector of Housing which decreased over the quarter.

Figure 6: Housing Output broken down by its sub-components

Infrastructure Output

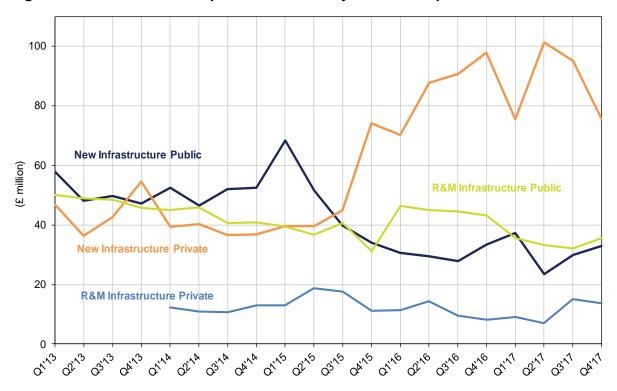

The volume of Infrastructure work in the fourth quarter of 2017 decreased by 5.5% compared to the previous quarter and was 12.6% lower compared with the same quarter in 2016 (Figure 7). Infrastructure Output has been generally more volatile than output levels of Housing and Other Work.

Figure 7: Volume of Infrastructure Output in NI

The recent decline in overall Infrastructure Output was largely driven by a sharp decrease in New Private Infrastructure. In contrast, there were increases in Public Sector Infrastructure outputs over the quarter. (Figure 8)

Figure 8: Infrastructure Output broken down by its sub-components

Other Work Output

The volume of Other Work in Q4 2017 increased by 4.1% compared to the previous quarter and was 7.3% higher compared to the same quarter in 2016 (Figure 9). The volume of Other Work in Q4 2017 is the highest level seen in the past nine years.

Figure 9: Volume of Other Work Output in NI

The increase in Other Work in Q4 2017 was accounted for by an increase in the level of New Public Other Work, R&M Public Other Work and New Private Other Work. R&M Private Other Work saw a decrease of 7% in total output in Q4 2017 when compared to the previous quarter (Figure 9).

Figure 10: Other Work Output broken down by its sub-components

4 Survey Response

Response rates provide an indication of the accuracy of final estimates. The target response rate on this survey is 92%. For the quarter 1st October to 31st December 2017, 92% of firms in the sample participated in the survey. A breakdown of valid response by stratum is highlighted below. Non-response bias is a potential issue for all statistical surveys. Non-response bias occurs where the responses of respondents differ from potential responses of non-respondents. The risk of non-response bias on the Northern Ireland Quarterly Construction Enquiry is minimised by the ongoing efforts to maximise response rates across all strata. Users should also be aware that a Census is taken of large firms (Strata 5 and 6) and these firms collectively account for approximately three-fifths of total construction turnover based on IDBR. More information on the quality of the construction output estimates can be found at:

https://www.nisra.gov.uk/sites/nisra.gov.uk/files/publications/QCE%20Quality%20Report.pdf
